FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 1

NEW YORK AND CHICAGO, JANUARY 4, 1903

One Dollar Per Year

Winsor and White Enchantress

Strong Rooted Cuttings
Now Ready for Delivery

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere, and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. Order early, while we can promise immediate delivery, and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6.00 per 100, \$50.00 per 1,000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60.00 per 1,000. Strong established pot-grown plants, \$9.00 per 100, \$75.00 per 1,000.

PELARGONIUM PURITY

Why not grow PELARGONIUM PURITY as an Easter Plant? They can be had in splendid shape, they are as easy to grow as a Geranium, bloom early and continue blooming for two months, make dwarf bushy plants as pretty as an Azalea, and can be sold more readily because cheaper. We have a few thousand in fine shape, 3 in. stock, which we offer at \$1.50 per doz.; \$6.00 per 100. We also have other good varieties, such as GALATEA, COUNTESS OF CREWE, GLORIOSA, COUNTESS OF WARWICK, TOMMY DODD, etc. \$1.50 per doz.; \$6.00 per 100.

GERANIUMS

New Varieties We will send a collection of one each of one hundred varieties 1905-6 introduction for \$10.00; fifty for \$5.00.

Standard Varieties We have an immense stock in fines hape ready for immediate shipment, including the very best varieties

Mushroom Spawn

the best Mushroom Spawn in the market, is sold by all leading seedsmen.

A fresh sample book, enough for a small trial bed, together with large illustrated book on

"MUSHROOM CULTURE," will be mailed postpaid on receipt of 40c. in postage stamps. Address American Spawn Company, St. Paul, Minn.

"Quality is remembered long after price is forgotten." What Quality Means.

Quality means the best and finest types procurable in their respective classes. We go to specialists for our flower seeds. Our customers, the florist, the private gardeners demand the highest grade. We have no cheap catalogue trade. "Quality" may mean a little higher in price. "Quality" in fact, means "Quality" and we know that when you buy from us you get it, and our customers know it, too. Catalogues now in press; 40 pages. Write for one; it's free. We sell bulbs too.

ARTHUR T. BODDINGTON, SEEDSMEN,

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
 George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

BLYTHEDALE, MD.—J. Ford Semper is now in charge of the seed laboratory here instituted by his brother, Frank W. Semper.

CHICAGO. A new concern has just opened at 117 Fifth avenue known as the National Seed Company (incorporated), dealing in garden and field seeds and poultry supplies.

MARBLEHEAD, MASS.—The seed business of J. J. H. Gregory, who is now in his eightieth year, was on November 27 transferred to his son Edgar. The young man has for the past three years been head clerk in the seed house and foreman of the seed farms; he is a graduate of the Massachusetts Agricultural College, and is thoroughly familiar with the business in all its branches.

CANAL DOVER, O.—C. F. Betscher reports cut flower business slow. Collections were very good up to December, since which time they have been stiff. Mr. Betscher says bulbs in several lines have been in good demand. This has been the case with peonies, and the prospects for 1908 are bright. Cannas are scarce. There is an increasing call for dahlias, also for iris. Gladioli in the West are pretty well cleaned up.

Seed Trade Notes.

A trip part way West and an extended correspondence with many prominent seedsmen in the East since my last letter has made very clear to me the feeling of the trade in general regarding the prospects for business in the season that is so nearly upon us. Almost without exception the members of the seed trade that I have personally seen and communicated with during the past ten days, and the consensus of opinion is, with one or two exceptions, strikingly unanimous, affirm, and most positively, too, that the coming season of 1908 will develop to be by far the most satisfactory year the seed trade of this country has ever known. The foundation for such reasoning is most obvious; the great buying public is thoroughly imbued with the idea (the reasons for this are most apparent to the careful student of existing conditions) that there are very few seeds to be purchased at any price, and that it will be only the early buyers who will obtain a complete filling of their orders. Now this being, I think, a true state of the case (it matters little as regards the final results, whether the public has or has not in a measure unnecessarily alarmed itself I believe the seed trade in general will see more orders placed in January and February than ever before in the history of seed selling in America.

It is needless for me to take space to add that there will be the usual flood of orders in March and April no matter how many seeds are sold early in the year. But time will tell. I may be all wrong; and, if so, can most easily acknowledge myself mistaken.

The very unseasonable mild weather, without snow, which we are having all over the country, has much injured what little business there always is between

JAMES VICK'S SONS
 ROCHESTER, N. Y.
 The Leading Specialists and Largest Growers of High-Grade Asters in the World.

Two New Varieties for 1908

VICK'S IMPERIAL SUNRISE
 A novelty of extraordinary merit. Seedling from Vick's Daybreak, but distinct in form of flower, each petal being perfectly quilled. Color, delicate pink. Plant a robust grower, upright branches, each crowned with magnificent double flowers, three to five inches in diameter. Type securely fixed. Sure to be a winner. Packet 25c; two packets or more 20c, each.

VICK'S EARLY BRANCHING
 Developed from Vick's Late Branching. Flowers of this new variety can be placed on the market ten days ahead of Late Branching sorts. Plants have few branches which are free from side buds, the whole strength of the plant being given to the development of large perfectly double flowers. Long stems. Two colors, White and Rose. Packet 25c; two packets or more 20c, each.

For prices in quantity see our "Aster Book for Florists."

OTHER FAVORITE VARIETIES

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Packing and Shipping Young Forest Trees.

The United States Forest Service gives the following directions for the packing and shipping of forest tree seedlings: "As soon as the seedlings are taken from the ground the roots should be dipped into a puddle of thin mud. Bundles of 50 or 100 should then be made, and the roots of the plants covered with moist sphagnum moss, which, in turn, should be wrapped about with several layers of thick paper. The paper assists greatly in preventing the evaporation of moisture from the bundle."

This is good advice. The puddling of the roots of all kinds of stock is now practiced by almost all nurserymen, having been found of the greatest advantage to the stock. Unless the seedlings are very small there would be no need to tie in bundles. Still, when in bundles of a certain number each it enables the receiver of them to determine whether or not he has received the correct number ordered, and the stock is taken from the packing cases much more expeditiously when so treated.

The sphagnum moss recommended is a good thing, but nurserymen who pack largely have ceased to use it for some time past, because of its great expense alongside of excelsior and even short straw, partly decayed. When excelsior and straw are mixed and well wetted and placed about the roots of plants in a box, the box cover well nailed on, the contents will be damp for many weeks afterward.

The Forest Service of the United States Department of Agriculture is doing good work in interesting the public in the importance of tree planting and its connecting interests.

High or Low-Branched Fruit Trees.

As a rule all writers for the agricultural press advocate the use of low-branched fruit trees. There are so many reasons for it they say; the ease of gathering the fruit, the protection one tree is to the other in cold climates, the prevention of the trees being blown over in gales, and lately is to be added the facility of reaching such trees with spraying mixtures. These are all good reasons, and they will appeal to those who set out orchards of fruit trees, such as those do who are readers of the agricultural journals. On the other hand, a salesman of a large retail nursery finds that his customers do not want a low-branched tree. One trimmed up to five feet is about what is desired. If lower branched the customer will ask to have the tree trimmed up; and when buying in a stock of trees, as many retail nurseries do, the high-branched ones are always preferred, being the best sellers. The reason for this is, that the man who wants but a dozen or so of trees wishes them to set here and there, perhaps in his vegetable garden or on his lawn, and he prefers a tree that he can get under when he wishes to. The space under the tree adds so much to the dimensions of his lot, often but a small one; while many of the reasons the orchardists give for low-branched trees do not concern him.

This is why the retail nurserymen living near large cities ask the wholesale growers to select for them high-branched trees or those that can easily be pruned up higher than they are if desired.

Cuttings of Shrubs.

With the advent of New Year's it is time that the making of cuttings of such shrubs as it is desired to increase should be commenced. In many European countries this work is done in October, but then it is where but little freezing occurs, and the cuttings are inserted at once in the open ground in sheltered positions. This was the practice there when the writer was a lad, some 50 years ago, and it still is, as the magazines show, but his recollection is that there was not nearly the success attending the operation that there is with our way of making the cuttings in the Winter, packing them away in damp sand in a cool place until Spring, and then setting them out in nursery rows. It may be that in our Southern States the old European way could be tried successfully, but where hard freezings occur it is not the best method.

In addition to the Winter made cuttings, there is the Summer method, which consists of using the half-ripened young shoots and rooting them in a greenhouse or a frame. Between the two ways our nurserymen keep up a good supply of all kinds almost, for there is hardly one cutting that will take root under one plant or the other.

Where shoots are not scarce a length of 8-9 in-

ches is a good one for Winter made cuttings. This allows of easy handling both when making the cuttings and when setting them, and when set to half their length it leaves 4 to 5 inches above ground, ensuring several buds from which shoots should come.

There are hardly any shrubs of a deciduous nature that fail to root under good conditions treated in this way. The few there may be are not worth suggesting, and the propagator should go ahead with every kind desired. With evergreens, such as ivies, *Euonymus japonicus* and *lucidum*, *Photinia serrulata*, *Schinus japonica* and other hardy kinds, Summer made cuttings are the best.

Pruning Lilac Bushes.

As seen on many a lawn the lilac is not a shapely shrub. It is rarely pruned, and growing as it will its lower branches are usually bare of all young wood and consequently bear no blossoms. The lilac is one of the bushes that flower from the young shoots made the previous season, and this indicates

of all that on a lawn with not a sucker in sight. The roots of trees of the sprouting habit need to be injured before the trees sucker. When in a lawn or in any other place where the roots are undisturbed there are no suckers. The sassafras is one of the worst of suckering trees, when its roots are hurt. Yet there are many old trees of it on estates here around which no suckers appear.

Of course, we do not want to run the risk of planting such trees in particular places where it is quite unknown whether moles, mice or something else will or will not injure the roots; but inasmuch as concerns the beautiful sassafras, the writer would run the risk of recommending it as a lawn tree, where the surface about it was to be kept in soil.

There seems but little use for the allanthur, excepting for waste places where nothing else will grow.

Viburnum Wrightii.

Numerous as are the viburnums in cultivation no one contends there is not room for *V. Wrightii*, the one of our notes and illustration. The greater number

of those well known have their claims of merit based on their flowers. *Wrightii* asks for admission to the list because of the beauty of its scarlet berries. These berries are not large, but they are produced in great numbers, making of the bush that bears them one of the most ornamental of all in the closing days of Summer and in Autumn. Our photograph of the plant illustrated was taken in late September, at which date there was no evidence of any fading of the beauty of the berries; nor is there in any season until the cold of Winter approaches.

Landscape gardeners and all others who see it, in fact, make notes of its beauty in order to procure specimens for their planting projects.

Although its chief claims to recognition are on account of its red berries, it is not to be overlooked for its flowers. These are white, as are those of all other viburnums with which we are acquainted, and these white flowers are borne in clusters, a bunch on every shoot, practically.

There are some shrubs in which the bunches of berries so overlap the leaves as to be visible a long distance away; such a one is the *Viburnum opulus*. Such shrubs are well planted massed together to make a display of scarlet. In the case of the subject of our notes, *V. Wrightii*, the bunches of scarlet berries are so set among the leaves that each bush is as a bouquet; and a single bush set by itself is sufficient to make a pleasing display.

JOSEPH MEEHAN.

Viburnum Wrightii

that a good annual pruning is required. As with all shrubs of this class, the pruning must be done immediately after flowering is over. It can be severe or not as the bush seems to demand. If unshapely the bush should be cut back to permit of a well-formed specimen by Autumn. When the lilac is pruned every Spring as soon as flowering is over, it will be found that a moderate cutting back will suffice. Cut back some of the older shoots, leaving those made the previous Summer to give the flowers. The cut back ones will bloom the following Spring. This moderate pruning is really better than a heavy one, because, being in full expansion of foliage, a heavy cutting back takes so much of the foliage that the shrub receives a severe check. It is only in the case of an unshapely specimen that the temptation arises to prune it hard.

Allanthur Trees Sprouting.

A correspondent of the Country Gentleman writing from Buffalo, N. Y., as it appears, mentioning the allanthur, says of it: "And if the allanthur ever sprouts here, I have never seen it." To which the editors reply: "The editors would remark that in Albany the allanthur is regarded as an unmitigated nuisance." The character the aforesaid editors give this tree will be considered well deserved by almost everyone. Yet it will bear saying that in common with many trees noted for their suckering nature it is not unusual to see very large trees

PROHIBITION OF IMPORTATION OF GOOSEBERRY BUSHES INTO ENGLAND.—The Board of Agriculture and Fisheries has issued an order prohibiting the landing in Great Britain of any gooseberry bush or currant bush from abroad, as a step to the prevention of "gooseberry mildew." Ten pounds is the penalty for infringing the order. The term "bush" includes any part of a bush except the fruit. The order, which is cited as the American Gooseberry Mildew (Prohibition of Importation of Bushes) Order, 1907, came into operation on December 14, but will not apply to the landing of any bush on or before January 31, 1908, if a license authorizing such landing has previously been obtained from the Board of Agriculture and Fisheries, and is produced if so required by any officer of Customs when the bush is landed.—The Nurseryman and Seedsman, Eng.

DES MOINES, IA.—W. E. Garlock, one of the largest land owners in Jefferson township, Polk county, is planning to convert his farm into a model fruit ranch. For a number of years he has been gradually going into the fruit business and now he has over 12,000 live sets of which about 9,000 are bearing. He is now making arrangements to put in a large cold storage plant next Spring to take care of next season's crop. He already has a large fruit warehouse and practically all of the machinery necessary to care for the orchard.

NEW PINK BABY RAMBLER, ANCHEN MULLER

PINK, WHITE and CRIMSON Baby Rambler Roses

We offer a very nice lot of strong two year old dormant plants, which if potted up now will make elegant Easter stock.

PINK BABY RAMBLER

(Anchen Muller). A beautiful luminous shade of pink, a color which is always admired, \$3.50 per doz.; \$25.00 per 100.

CRIMSON BABY RAMBLER

(Mme. Norbert Levassieur). Fine plants of this popular variety, \$2.00 per doz.; \$15.00 per 100.

WHITE BABY RAMBLER

(Katherina Zehmet). Pure white with yellow stamens, flowers produced in large candelabra shaped trusses, \$3.50 per doz.; \$25.00 per 100.

HENRY A. DREER

714 Chestnut St., PHILADELPHIA, PA.

California Plant Notes.

The glory of our gardens at present is the poinsettia. The season has been favorable for its growth and the development of its large scarlet bracts. Furnished as most plants are this season with their bright green leaves, their beauty is much greater than when the plant is defoliated by chilly nights, as is often the case, leaving the scarlet tops fully developed on bare stems. There are specimen plants growing here fifteen feet high with an equal spread of top and with their hundreds of "bloom" they are gorgeous in appearance. These large specimens have been permitted to grow in their own natural way, the pruning knife or shears never having been used on them. This method of treatment does not produce long stems, but a greater number of bracts. Many specimens are grown by the magenta colored bougainvilleas, the two colors being out of harmony; the effect is not a pleasing one.

The next subject that makes our town aglow at present is the beautiful *Bignonia venusta*. Many houses of two stories are draped and festooned with garlands three to five feet long of this rapid growing vine, while small summer houses are completely covered with its golden colored bloom.

We have the unusual spectacle at present of several large *Grevillea robusta* in full bloom, the second crop for the season, and the first instance of the kind that has come under my observation.

Cassia tomentosa, an evergreen shrub, is also in full flower, and where given room for development it attains large size—10 to 15 feet. With its light yellow flowers, borne in great profusion, it is one of our most desirable ornamental shrubs. It also blooms freely during June and July, when it sets seed in great abundance.

Cestrum amaranticum is another yellow flowering shrub, of erect habit, that is making its contribution of beauty to our yards and gardens. This plant blooms every three months if the pruning shears are kept away from it, and eventually grows to be a very large shrub.

The beautiful *Reinwardtia trigyna* is also in full bloom. The flowers are an inch or more in diameter, of the pleasing color of allamandas, borne in great profusion. If planted in a sheltered sunny exposure and well cared for, it grows to a height of six feet, and spreads by suckers, which in a few years form a large clump. P. D. B.

Stock You Will Need

- MARGUERITE, QUEEN ALEXANDRA. \$3.00 per 100.
- SPIRAEA CLUMPS. Large field clumps full of eyes.
- ASTILBOIDES FLORIBUNDA. \$4.25 per 100, \$10.00 per 1000.
- ASTILBOIDES SUPERBA. \$6.00 per 100.
- NANA COMPACTA. \$4.50 per 100, \$40.00 per 1000.
- JAPONICA. \$4.00 per 100, \$35.00 per 1000.
- BOXWOOD. Fine bush shape plants, 30-36 in. high, 18-20 in. through, \$2.00 each. Pyramid shape, 3-36 in. high, 15 in. through, \$1.75 each.
- RHODODENDRON. Short well formed plants for pots, full of buds, 18 in. size, \$9.00 per dozen, 24 in. size, \$12.00 per dozen.
- AZALEA MOLLIS. Bushy plants, full of buds, force very easily, 12-15 in. high, \$25.00 per 100, 15-18 in. high, \$35.00 per 100.
- AZALEA INDICA. Some especially fine plants in *Mad. Van der Cruyssen, Nioba*, 16-18 in. crowns, \$1.00 each, 18-20 in. crown, \$2.00 each.
- BOUGAINVILLEA GLABRA SANDERIANA. Short well trimmed plants that will bloom full for Easter 4 in. pot plants, 6-8 in. crowns, \$20.00 per 100, \$2.75 per 12.
- CANNAS. One of the best collections of market varieties including *Beaute Pollevoine, Crimson Bedder, Charles Henderson, Florence Vaughan*, etc., strong 2-eye divisions, \$3.00 per 100, \$25.00 per 1000.
- BOSTON FERN. 24 in. well established, \$4.00 per 100, \$35.00 per 1000.

THE FLORISTS' EXCHANGE

the end of the bulb season and the beginning of the seed sales. Another drawback to filling what orders are coming daily to hand and in hourly increasing volume is the fact that owing to the very late deliveries of seeds from growers' hands (the latest in my memory for thirty years), hardly a general order can be filled fully, hence delays are even now creeping in; and all these hold-ups added to the flood of orders that the sending out of the general retail and wholesale catalogues will very shortly bring, will tax to the limit the filling order resources of even our very largest and best equipped seed establishments. There will be an enormous seed business done in 1908, but there will also be one of the most trying and exhausting working seasons experienced in years.

All the seed shortages are now known, and in many cases the subject, or I may say limit, of price obtainable is only restrained by the bounds of conservatism—how much is it fair to charge a regular and faithful customer? Surely in such a case \$6 per bushel for Stowell's Evergreen sweet corn, \$4 per pound for Southport White Globe onion, \$4.50 per bushel for Alaska peas, etc., is about the limit of fairness to regular and faithful old-time customers! We must not "kill the goose that lays the golden egg" this season, as the time is ahead when customers who will do us the favor to buy our seeds at one-half these rates or even less, will be welcomed with open arms.

The crop of seed catalogues is being delivered fast and furious; in very much better volume than the seeds they represent. Every seedsman as he contemplates his probable returns from his lists now entrusted or very shortly to be to Uncle Sam's mail, must again realize and deplore the fact that every seed consumer in America who purchases \$1 or even less of seeds annually will receive at the very least seed books whose absolute printing cost has been surely much in advance of \$2. But this is such an old condition that I will simply refer to it and pass along.

Three sales of sweet corn have been reported to me during the past few days; all three sales were of Stowell's Evergreen. The first was at \$4, the second at \$6.50 and the third at \$9 per bushel. You can from this easily read between the lines, that late sweet corn has reached the price limit—that is, price is now simply a question of how much the holder wishes to favor his customer; and as a seedsman I earnestly advise that our customers be shown every favor that their past accounts justify as regards marking up the price of the scarce items to them. On the other hand, if the buyer can get along with a peck of sweet corn or a quarter-pound of egg plant, he (the customer) should confine himself to these limits and not try to buy seed for other than his regular uses. Of course, any dealer has an undisputed right to speculate in seeds; if so, he must expect that his grower or wholesale seed supply house will charge him accordingly.

A very Happy and Prosperous New Year I wish to all.

NEW YORK. Romer J. Irwin, who has been connected with Vaughan's Seed Store of this city as salesman since 1900, has severed his connection with that concern and has acquired an interest in the firm of H. H. Berger & Company, 70 Warren street, of which he is now vice-president.

Mr. Irwin, who is well known in the trade in this section, began his horticultural career when he was 15 years of age, first entering the employment of the late firm of Pitcher & Manda, Short Hills, N. J., in that concern's seed and bulb department. From there he went to J. M. Thornburn & Company, New York, where he remained seven years, leaving that house to accept the position in Vaughan's Seed Store which he has just resigned. We wish Mr. Irwin that success in his new venture which his well-known ability is sure to bring about. He will travel in the interests of Berger & Company, and left on Thursday for a trip on the road.

Maurice Fuld, manager of W. W. Rawson & Company, seedsmen, Boston, Mass. was in town Tuesday. Mr. Fuld informs us that his firm has inaugurated a unique and original institution in establishing at Rawson's dahlia farm at 5 Green street, Marblehead, Mass., an outdoor display

and salesroom. Here will be grown all the best outdoor garden flowers, including all the novelties from all parts of the globe as these materialize. For example, in May there will be a display of Darwin and breeder tulips; in June Asiatic irises, oriental poppies and delphiniums; in July over 100 varieties of sweet peas; August, gladioli and asters, September, about 1500 varieties of dahlias and in October hardy chrysanthemums, and Fall blooming crocuses. These displays will give all interested an opportunity of comparing the different stocks in their season, thus proving of immense service to all concerned.

European Notes.

Permit me once again, Mr. Editor, to extend to your good self and all your readers my heartiest good wishes for a thoroughly happy and prosperous New Year. The possibility of a realization of these good wishes appears much more probable to-day than at any time during the past two months. Already the clouds which have overhung the money market have begun to disperse and the salutary

Romer J. Irwin

check to wild speculation is having a beneficial effect. Ere long we may hope that public confidence will be restored once more, for in the prosperity of the nations as a whole the well being of the seed and nursery trades is assured.

Coming now to business, it is satisfactory to note that our 1907 harvest will be finished in a few days. Peppers, tomatoes and egg plants in wofully small quantities are now on the way from the south where the floods have to some extent abated. At an auction sale in Lincolnshire, England, during the present week, the growing crops of wheat, barley and oats were sold as they stand in the fields and are to be harvested as soon as possible after Christmas. In the meantime the market prices of grain are gradually weakening, and in spite of very vigorous statements to the contrary which one heard during the boom, growers are inquiring what seed crops we can give them for next season. In any case, prices will have to be higher.

The many friends of Jules Holder of Brain S. l'Anthon will regret to learn of his death in hospital after a long and painful illness, at the early age of 49 years. The death is announced of the widow of Mr. J. K. King, Coggeshall, at the age of 75. As the late Mr. King is reputed to have founded the business in 1793, he must have married a very young wife!!!

The retail seedsmen of Europe are flooding the different countries with their new season's catalogues. Those to hand from British houses are more elaborate than ever before. Possibly the abolition of secret commissions, i.e., "graft," may have something to do with this. Both Eckford and Dobbie give colored illustrations of some novelties in sweet peas. There are such great differences in the illustrations of the same varieties that our sweet pea cranks will be compelled to buy from both houses to see which is correct.

EUROPEAN SEEDS.

Sweet Peas for 1908.

I think I may fairly claim to have first originated the forecasting of coming season novelties, but at the outset it was not a very difficult task to hunt them up. Messrs. Eckford and Burpee were almost the only people laying claim to being raisers and introducers, and when I conceived the idea of letting enthusiasts know some weeks ahead of introduction what novelties were coming, the above firms actually supplied me with proof sheets of their catalogues red hot from the press.

There are a good many who write up lists of coming novelties nowadays, for all of our journals pay particular attention to sweet peas. With the hope that it may prove of service I quote a full list for 1908, together with brief descriptions and names of raisers. That pioneer of sweet pea writing, Rev. W. T. Hutchins, must indeed have this work out on to keep pace with things.

The descriptions given are chiefly the raiser's, but I have supplemented them with views of my own, in some instances.

Eckford's, Wem.

- 1 Mina Johnston, bright rose, carmine standard, salmon wings. A very brilliant flower.
- 2 H J R Digges, claret, shaded maroon, bold flower.
- 3 James Grieco, the nearest to pure yellow yet seen.
- 4 Purple King, a giant indigo purple self.
- 5 May Perrett, delicate buff ivory shade, slightly hooded.

Dobbies, Rothsay.

- 6 Princess Victoria, a glorious bright pink Spencer, a little deeper than Mrs. Harcastle Sykes.
- 7 The Marquis, an enormous rosy-mauve Spencer.
- 8 Menie Christie, a huge Spencer, magenta tinged violet.
- 9 Prince Olaf, a fine blue stripe, the best of its section.
- 10 Hannah Dole, a large rich maroon, good form.

Hursts, London.

- 11 Saint George, a much improved Evelyn Wyatt, a wonderful color, and slightly waved.

Lunley, Havant.

- 12 Constance Oliver, a duplicate of Countess Spencer save that cream takes the place of the white shadings.
- 13 Marjorie Willis, a fine bright rose Spencer, nearly like Prince of Wales in color.
- 14 Purity, an improved Dorothy Eckford. I have not seen this variety.

Machereth, Ulverston.

- 15 Devonshire Cream, a large expanded cream, an advance on Hon. Mrs. Kenyon.
- 16 Fumetta Bathurst, a giant white, an advance on Blanche Burpee, well expanded.

Stevenson, Woburn.

- 17 Rosie Adams, quite a new color, rich mauve, with coppery standard, a giant Spencer.

Starke Son, Ryburgh.

- 18 Horace Shupper, a giant deep pink Spencer, something like Olive Bolton to my mind.
- 19 Silver Wings, a beautiful white Spencer, faintly splashed with pink.
- 20 Lorna Deane, a pale pink Spencer, very near Mrs. Harcastle Sykes.
- 21 Maggie Starke, an intensified Helen Lewis, very bright; true Spencer form.
- 22 Nell Gwynne, cream and pink Spencer, something like Constance Oliver.

Sydenham, Birmingham.

- 23 Herbert Smith, orange and pink, an improved Evelyn Wyatt.
- 24 Miss Millie Braslin, a bright crimson of great size.

Cole, Northampton.

- 25 Lady Althorpe, white faintly flushed with pink at edges, true Spencer form.

H. J. Jones, Lewisham.

- 26 Aime, bluish white, larger than Dorothy Eckford.
- 27 Bob, a giant deep red with lighter wings.
- 28 Florrie Crutcher, rose pink standard, an improved Bolton's Pink.
- 29 Keston Red, a brilliant scarlet, an improved Scarlet Gem.
- 30 Mrs. E. Herbert, lilac tinted pink, slightly hooded.

Stokes Standard Seeds.

I am a MARKET GARDENER'S SEEDSMAN. Send me in your list of wants for next season. You will like my stocks and my prices. Wholesale list ready.

Stokes Seed Store.

219 Market Street, PHILADELPHIA

- 31 Mrs. P. J. Foley, clear lavender blue, an advance on Mrs. G. Higginson, Jr.
- 32 Mrs. Tom Fagg, a rich mauve Spencer.
- 33 Mrs. R. C. Pulling, pure white Spencer with red shadings, beautifully waved.
- 34 Mrs. J. Miller, clear pink self, improved Miss Willmott.
- 35 Negro, a large, very dark flower, maroon standard, blue wings.
- 36 Penneck, red standard, blue wings, very large.
- 37 Winnie Cleve, a rich mauve, form of Dorothy Eckford.

I have not seen this nor any of the above dozen.

House & Son, Bristol.

- 38 Harold, a clear primrose, akin to cream Shasta.

Suttons, Reading.

- 39 Our Queen, deep apricot and pink Spencer, a lovely variety.

Bolton, Carnforth.

- 40 Clara Curtis, a fine primrose Spencer.
- 41 Purity, a grand white Spencer.
- 42 Mrs. Henry Bell, rich apricot pink, a giant Spencer.
- 43 Beauty, a soft blush Spencer, a grand thing.
- 44 Regina, a giant Black Michael.
- 45 Blackbird, the nearest to black, good size and form.

E. Wm. King, Coggeshall.

- 46 Mrs. Wm. King, very much the same as John Ingman, said to be quite fixed.

Gilbert & Son, Dyke Bourne.

- 47 Britannia, deep navy blue slightly hooded, produces threes and fours.
- 48 Rosie Gilbert, bright crimson, Spencer.
- 49 Miss West, rosy carmine, Spencer, very large.

The above three I have not seen.

Hemus, Upton-on-Severn.

- 50 Paradise Carmine, bright rosy carmine, somewhat similar to George Herbert and John Ingman.
- 51 Paradise Ivory, deep buff Spencer.
- 52 Paradise White, similar to Etta Dyke and Purity.
- 53 Paradise Regained, light blush Spencer.
- 54 Paradise Cream, a soft cream Spencer.
- 55 Paradise Red Flake, a red flake Spencer.
- 56 Zero, pale pink Gladys Unwin, early as Mont Blanc.
- 57 Hester, wavy white, early as Mont Blanc.
- 58 Lucy Hemus, an improved Jeanie Gordon.
- 59 Evelyn Hemus, soft cream Spencer, edged pink.
- 60 White Triumph, a white form of Triumph.
- 61 Butto-hole, salmon and bronze.
- 62 Miss Rostock, color not known by me.

Breadmore, Winchester.

- 63 Etta Dyke, pure white Spencer.
- 64 Audrey Crier, a very fine bright pink Spencer.
- 65 Elsie Herbert, white edged pink, true Spencer form.
- 66 Princess Victoria, similar to Dobbies' Princess Victoria.
- 67 M. A. Linzee, a giant rosy pink Spencer.
- 68 Prince of Asturias, deep chocolate standard, purple wings, true Spencer form.
- 69 Dudley Lees, a large deep chocolate maroon.
- 70 Hilda Jeffery, an improved Jeanie Gordon.
- 71 J. T. Crier, fine lavender, strong grower.
- 72 Vera Jeffery, pale pink Spencer shaded with cream.
- 73 Mrs. C. W. Breadmore, color not known at moment of writing.

Unwin, Histon.

- 74 Chrissie Unwin, bright scarlet, wavy standard.
- 75 Miss E. F. Drayon, deep scarlet, wavy standard.
- 76 Bobby K., pale pink Spencer, improved Mrs. A. Watkins.

Morse, San Francisco, Cal.

- 77 Florence Morse Spencer, white, edged with pink, true Spencer, possibly like Elsie Herbert.

Burpee, Philadelphia, Pa.

- 78 White Spencer, similar to Etta Dyke.
- 79 Cream Spencer, similar to Clara Curtis.
- 80 Apple Blossom Spencer, possibly like Bobby K., Shropshire, Eng. T. A. WESTON.

THE CHRISTMAS TRADE OF 1907

THE reports of the past Christmas trade that have reached us, so far, are indeed most gratifying. There does not appear to have been any diminution of the volume of business transacted from that of previous years, although in the aggregate the money value of the sales made will not reach up to that of former records. Retrenchment was evidently uppermost in the minds of buyers, and medium priced goods had the call.

Our reports do not show that any novelties of any consequence were offered. There seems, too, to have been a falling away in the number of made-up arrangements of plants. The favorites were apparently Begonia Gloire de Lorraine, azaleas, primulas, bulbous stock in pans and pots, Jerusalem cherries, etc. Palms and ferns were also in requisition. There are varied views concerning the poinsettia. Some state that a limited demand for this plant was experienced; others again that it went as usual. Considerable quantities of artificial poinsettias were disposed of in some sections, and this, no doubt, militated against the outlet for the florists' product.

Green materials of all kinds went well. Holly found large sales, but much of the stock was not well berried. Mistletoe was also in demand. Christmas trees seem to have been overdone, although sales of these were large. Bells were not so extensively called for as in other years. Boxwood is becoming a factor in Christmas design work.

The cut flower business done was most satisfactory all over the country; not so high prices as formerly were realized, but the quantities of stock sold were quite extensive. There was a scarcity of carnations, particularly red kinds, in some localities, but in general the supply of cut flowers was ample for all demands. Orchids found favor in several places, especially in Toronto. Pickling does not appear to have been practiced to the extent of that seen in previous years, showing that we are progressing along some lines at least.

Taking it all in all in view of the financial stringency, the Christmas trade of 1907 may be regarded as most satisfactory.

Easter, 1908, comes on April 19.

INDIANAPOLIS. — The Christmas trade of 1907 while far from creating a new record has proved itself to be most racious with the florists in general. In comparison with other lines of trade, the flower business, though slightly less than normal, makes a wonderful showing. Holiday trade was late in asserting itself, and until December 22 it seemed that the silver lining was meant or more glorious times. A lavish expenditure by any one person was seldom noted, but the yuletide spirit was broad as its scope, and the number of deliveries, though modest in value, was large. The assertion is made that people of high standing who could not afford expensive presents, such as jewelry, turned to the florist for expressions which are eternally in good taste and most acceptable.

Baskets, hamper and mixed arrangements of plants ranging in price from \$3 to \$7.50 were sold. It is thought, in rarer numbers than last season. An article arranged in a catchy or superior manner was as readily detected by the customer as by the originator himself. Poinsettias in 4, 5 and 6-inch pots were elected by the hundreds at 50c. to \$1.50 each. Gloire de Lorraine begonias, too, were sold in large numbers, but many dealers are aware of the shortcomings of this beautiful plant. Small azaleas numerous as they were, did not meet the requirements. Take the variety lexe, for an example, and there is no other flowering plant which can be sold with the same satisfaction to the purchaser; these retailed at \$1 to \$2 each.

Grower, storeman and the public were all eager for any decided novelty, but in this many were disappointed; the writer himself was one of them, and observed less that was distinctly new than in many seasons past.

Boxwood strengthened its already firm position in the market as new adaptations for it are discovered. Wreaths, baskets, hearts and sprays of this material sold well. Michigan winterberries were of exceptional quality and found more favor than a major portion of the poor holly in this market. Carnations, as predicted, did not maintain the price intended for them; by Tuesday morning telegrams were received offering fancy stock at \$4 to \$5 a hundred. All the home-grown carnations were sold long ere this at \$5 to \$7 a hundred; \$1 to \$3 per dozen was the wide range in the retail price. Long-stemmed American Beauty, strangely enough, sold ahead of last season; \$18 to \$24 per dozen was obtained for them, those selling at \$6 to \$12 were not of good stem nor quality. Killarney was in excellent condition and went more readily than Bridesmaid at a less figure. Richmond sold well, as it is possible to sell this rose cheaper than Liberty in their years; \$4 to \$9 a dozen was the price.

Violets, single and double, found a constant demand at \$3 to \$4 per hundred; Eastern violets were on hand, but of satisfactory at 75c. to \$1.25 per hundred. Lily of the valley, Roman hyacinths, Paper White narcissus and jonquils received much attention at 75c. to \$1 a dozen.

Cut poinsettias were used more generally than ever before; the artificial product is almost as common as the real in downtown shop windows; \$3 to \$9 a dozen was asked for the florists' product.

Numerous social functions will, no doubt, result in a good business, particularly in smaller flowers for corsages.

RUFALEA, N. Y.—Christmas trade this year was good; while the sales were smaller, the grand total averaged about the same as the year previous. There were more sales running from \$2 to \$5 than ever before. Holly ran short in this vicinity for the first time in years, that is, the florists had a short supply, but it seems that the corner grocer had enough to meet the demands of his customers, selling it at 10c. per pound, which was less than the florist could buy it for at wholesale. Ardisias, heaths, poinsettias in pans, Adiantum Parleyense in five and six-inch pots had good sales.

S. A. Anderson reports that his business was very good, up to the standard of last year in every way, with the exception that the sales were of smaller amount, but more of them than in previous years. He had a great showing of Gloire de Lorraine begonia, also poinsettias and a general stock of Christmas plants, which he disposed of readily. This firm is one of the few who will take a flyer by inserting a full page advertisement in the local papers. W. J. Palmer & Son's branch store at 522 Main street, under the management of Arthur Beyers, had a fine line of made-up baskets, which were displayed to good advantage in the spacious windows. He reports a number of decorations Christmas week. Rachel Rehstock had a very good showing in plants, and a very attractive store decoration. She reports business especially good in violets, roses and the general run of Christmas plants and novelties far in excess of last year. L. H. Neubeck, who always has a very attractive display of plants in his houses, reports business away ahead of last year's. The Wm. Scott Company report business fine. They had a very large sale of potted plants of all kinds. Violets and roses also went well. Carnations from their own place at Corfu found a very ready sale.

W. J. Palmer of 304 Main street reports business very satisfactory, more sales than in previous years, but not as many large ones. As one man said, he had about \$2 to spend for a Christmas present, and he thought about the most appropriate gift he could purchase would be a bunch of violets, and so on. This firm had the biggest lot of from \$2 to \$5 sales it ever had. Violets went well; good Liberty, Bridesmaid and Killarney roses at \$5 per dozen found a very ready sale. Lily of the valley, gardenias and orchids also had a good call.

Schoenhut says trade was exceedingly good in his section. He also had more small sales than in former years, but totaled up a good Christmas business.

The Ever Ready Flower Pot Cover Company did exceedingly well this season; they are selling their covers all over the country.

ROCHESTER, N. Y.—Now that the Christmas season is over, we are breathing normally again, the only anxiety being about the result of receipts and expenses after all is straightened up. Judging from the cut flowers and plants disposed of, and comparing same with former years, the business done would seem to be equal to that of last year. Noticeable, though, was the absence of orders for large baskets and made-up plants, patrons apparently confining themselves to orders of smaller amounts.

Holly this year was very poor and brown, making sales of it very difficult, and wreaths hard to make presentable. Some good holly was to be had, but the

prices, a per crate, seemed probably to have been both sprays and ropes. The ground pine were in good shape and considerable was disposed of. Poinsettias and Gloire de Lorraine and kindred begonias seem to have had the lead in plants, and these and cut stock, both as made-up and single plants. Cyclamen, Roman hyacinths, Primula obconica, lilies, palms, ferns, etc. all had their quota of buyers, and all the stores having delivery wagons, sent out late Wednesday afternoon.

The weather was better than expected the days and nights just preceding being moderately cold, and but few snow plants have been received about frozen plants. Cut flowers from local growers were not plentiful, owing to so much dark weather preceding the holiday, necessitating the ordering of considerable material from outside places. Particularly was this so in roses, the supply of which was short. All kinds of flowers were in good demand, and none were left to go to waste. Prices realized were equal to those of former years, both of cut material and plants, and all feel that but for the financial thrury the recent holiday would have been exceptionally good.

Much regret was occasioned by the behavior of Salvia Zurich. This plant, so full of promise on account of its color and mass of blooms, was not sent out by local growers, they preferring to lose the sale rather than dispose of a plant with poor keeping qualities. No amount of treatment seemed to help it in any way to hold its blooms, so we are doomed to disappointment unless future developments can show a more successful way to treat this plant.

Pretty and novel designs in plants were made possible by the use of "Hart's Handy Handle," its simplicity and adaptability making it in good demand.

Azaleas were scarce, several growers being unable to get enough for their own use. This, of course, helped the sale of other flowering plants, but is to be considered a loss from a grower's point of view. However, with the advent of the New Year and the days growing longer, coupled with the fact of the business depression passing away, a new lease of business activity is expected, so that all in all we are thankful for what we have, and hope to be.

Best wishes for a prosperous and healthy New Year to all from

COCKNEY.

SYRACUSE, N. Y.—It is generally agreed among the trade that the Christmas business done was about normal; all are satisfied, however. There was not so heavy a call for expensive articles as usual. There was far less holly and greens and fewer Christmas trees sold than in former years. Wreath peddlers had hard work to dispose of their stock even at 20c. each for a very fair article.

In cut flowers carnations had the call by a very large margin and sold readily at \$1, \$1.50 and \$2 per dozen; Bride, Bridesmaid, Richmond roses at from \$1.50 to \$3; American Beauty \$5 to \$12; lily of the valley and Roman hyacinthus at \$1, violets, \$2.50 to \$3.

There were no novelties to speak of. Quinlan had pretty baskets of Begonia Gloire de Lorraine and ferns, which sold well. Henry Morris made a good showing of Roman hyacinths and poinsettias. But was strong on primulas, Jerusalem cherries and ferns. Batholome had a nice cut of carnations, but his roses were not in crop, owing to the lateness of completing his houses.

L. E. Marquisee had an immense crop of carnations and sold out completely. Flamingo was a sight and fetched \$2 as did a splendid crimson seedling. Marchioness was a sea of white; it will well repay a visit from anyone who is interested in something that is really good. Some of his other seedlings are of great promise of which I shall speak later on. I am pleased to say Mr. Marquisee has completely recovered from his accident and looks all the better for his enforced rest.

Alfred Bellamy, who has charge of the greenhouses at Oakwood Cemetery, has been dangerously ill with blood poisoning caused by a scratch on the face from a large Pandanus ulmi. The doctors hope the crisis has passed.

Harry Chum, for many years with L. E. Marquisee, and well known to the trade, who has taken up his residence in England, has recovered from his painful accident and is now engaged in growing carnations near Warwick close to his old home.

PIFFESBERG, Christmas trade in all lines of business was not up to the level of last year, and so it was with the dealers, with but few exceptions. A better crop could hardly be expected, considering the tight and many people are out of pocket, and everyone ordered enough stock, expecting that at the last moment the crop might turn out all right. The weather was not so bad and quite a change for the time the day before. There was no scarcity of stock in the wholesale and

retail trade, particularly in the case of the quality of the stock. The demand for flowers was not so great as in former years, but the trade of about a million dollars for the holidays was not far from the mark. For the cheap grades and American Beauty from \$1 to \$2. The demand for the latter rose was not so great, and it is felt the flowers were not so good for some years back. Carnations were fine at from \$6 to \$19 per dozen retail. Carnations were expected to be scarce, but the day after, nearly every kind and were offered at dumping prices, but were not wanted. The best brought 10c. and from that down to 3c. per 100 for good stock, retailing at from \$1.75 to \$2 per dozen. Cut poinsettias sold fairly well at \$6 per dozen and the stock was unusually fine, keeping well. Paper White narcissus, lily of the valley and Roman hyacinths were not plentiful and from 75c. to \$1 were asked for them at retail. Violets were of excellent quality, \$2 per 100 was asked wholesale, and there was a good demand for them. Single violets at 10c. that price went very slowly. Sweet peas were not plentiful and sold at good prices. A few chrysanthemums were on hand but with little demand for them. Mignonette was fine at \$2 per dozen retail.

Plants did not sell as well as was expected. Azaleas were hardly far enough in bloom. Cyclamen were poor. Tulips in pots went well, also blooming primulas. Poinsettias made up in pans went slowly. Orange trees, of which there were more to be seen this year than ever before, went very slowly and a good lot of money was lost on them. Begonia Gloire de Lorraine was not so abundant and did not bring big prices.

In greens, trees were left over, selling at any price. Holly went best of all, and the market was cleaned up early. As high as \$19 per case was asked for it. Mistletoe was of an excellent grade and went fairly well. Laurel and pine wreathings were abundant. Southern smilax was more extensively used than heretofore. Boxwood is coming into more general use than ever for wreathings and other work; there was a good stock of it on hand, but all was disposed of at from 12 1/2c. to 25c. per pound.

E. C. R.

CINCINNATI. — Christmas business was all and more than was expected. Stock was not salted, consequently all sold and gave satisfaction. Poinsettias were very plentiful and quite a number were carried over, but there will be very little loss, as they will all be cleaned up before New Year's. Prices as quoted were maintained. Enechantress carnations that were fancy sold at \$10 per 100; other grades and qualities all went at 5c., 6c. and 8c.

Plants sold well. Poinsettias in pots, grown low and compact, sold best, Gloire de Lorraine begonia being a close second. Primulas went well as did pandanus. J. A. Peterson sold out and his stock of plants was second to none. Since Christmas stock has remained scarce, New Year's prices nearly equal those of Christmas and the demand will equal the supply.

The Republican Administration takes hold of the city on January 1, 1908, when all departments of the city hall will be profusely decorated. A miniature viaduct supposed to connect Walnut Hills with the city proper will be made by the Walnut Hills Floral Bazaar to be placed in the room of the Board of Public Service. Julius Baer had two autos and about 50 boys delivering on Monday, Tuesday and Wednesday; his business was simply immense. A Sanderbruch's Sons also did a large business. Hardesty, Partridge, Kelly, Walnut Hills Floral Bazaar and Fred Gear had a fine trade. George Tromeay, who had just opened a new store, did well. Huntsman & Company and J. O'Malley were very busy. J. T. Conger of Cartwell, O., says his trade was splendid.

Holly sold out to the last scrap, the price reaching \$7.50 per crate. Mistletoe never was better and never before sold better. Laurel wreathings went well. Artificial poinsettias made quite a hit and sold on sight, but like the holly, they will be overdone another year. Bells could be bought at your own price this year and many were left on hand.

E. G. G.

BOSTON. The Christmas trade was good and all the business that was expected to be done was done, and in many cases much more than anticipated. All kinds of flowers sold well. Trade generally has been good since. Prices have dropped none, though, as had been expected, still they are comparatively high. The best American Beauty roses still bring \$9, Richmond \$4 per dozen, other roses vary in price; Bride and Bridesmaid are selling at from \$3 up to \$15, carnations still sell well, the best grade yet bringing \$7 and \$8. Violets go more slowly than they have.

Lily of the valley sells fairly well. Lilies bring \$8 and \$12; mignonette \$2 to \$6; while some extra fancy grades bring more. Sweet peas sell at \$3 and \$1.50. Narcissus are plentiful at \$1 and \$1.50. Greens sell fairly well at the usual prices.

To the Members of the S. A. F. O. H.

Greeting: On the opening of this new year, I de-
sire on taking over the office of President of our na-
tional society to extend to you my heartiest good
wishes for a prosperous and successful year, both
as regards our individual interests and those of the
organization the welfare and advancement of which
we all have so much at heart. No man ever entered
on the duties of the presidency of the S. A. F. O. H.

more conscious of the great responsibilities resting
upon him than I do. To maintain the standard of
efficiency to which the organization has been brought
by my able predecessors, is a task which even those
most experienced in the work of the society must
regard as a formidable one. But as the old saying
has it, "The best of men are but men at best," I
assume the leadership to which your suffrage elected
me, promising you my very best endeavor to fulfill
as far as I faithfully and possibly can, the trust
which you, my fellow members, have reposed in me.

But in order that the society shall measure up to
its highest efficiency during the year 1908, I must
have and expect to obtain, the fullest co-operation of
all the members. I therefore urge the State vice-
presidents to do their very best in securing new
members in their respective localities, to spread
abroad therein propaganda concerning the organiza-
tion, its benefits, its usefulness, and how deserving
of encouragement and support it is by every man
and woman engaged in the lines of industry we are
banded together to promote and advance.

Of the various committees appointed by my pre-
decessor in office, I earnestly desire, as I feel sure of
obtaining, the faithful and full performance of the
respective duties which have been assigned to them,
as on the result of their endeavors very much of
the progress of our association depends. I also hope
that every member, individually, will act well his
or her part in the furtherance of the work of the
S. A. F. O. H. "One for all, and all for one," should
be the motto impelling each of us in our every
effort along the lines of society work.

I wish to call particular attention to the forth-
coming flower show to be held under the society's
auspices at Chicago, Ill., in the Fall of this year.
The committees appointed to carry out the details
of this our first undertaking in this line are now
hard at work, and I bespeak for them the best
assistance of all the members, looking to the ulti-
mate success that is hoped for in our stupendous
venture.

I would briefly refer to the great loss which our
organization has sustained by the sad death of our
secretary, Philip J. Hauswirth. The work of the
secretary's office is being looked after temporarily
by Willis N. Rudd, Morgan Park, Ill., whose well-
known ability ensures the utmost efficiency in every-
thing connected with that office.

The preparation of the annual report for 1907
is being rapidly pushed to a conclusion, and the
publication and distribution of the document will
be accomplished with as little delay as possible.

Again assuring you of the "best that is in me,"
in the conduct of the society's affairs during 1908,
and looking for, and expecting the cordial and
heartly support of you all,

I am,

Yours fraternally,

F. H. TRAENDLY,

President S. A. F. O. H.

The New S. A. F. O. H. Directors.

President Frank H. Traendly of the S. A. F. O. H.
has appointed as directors of the society Messrs. John
Young, New York, and George Asmus, Chicago, Ill.

Mr. Young is well known in the trade and needs no
introduction to our readers. He is the secretary of the
New York Florists' Club, and has served the organiza-
tion in that capacity continuously for nearly twenty
years, a grand testimonial to his efficiency and ability.
Mr. Young conducts a wholesale cut flower commission
business at 51 West Twenty-eighth street, New York,
where he has been established for a number of years.
He is very popular with the trade, and will, we feel

sure, make an excellent director of the national society.

George Asmus is in charge of Schiller's retail florist
store in Chicago. He is an active and energetic worker
in the interests of horticulture in the western city, and
has shown great ability as a flower show manager. He
puts his whole heart into every undertaking with which
he is connected, and it goes without saying that this
same spirit will characterize his work in connection with
the office to which he has been appointed. Before going
to Chicago, Mr. Asmus lived in Buffalo.

American Carnation Society.

Railroad Rates to Washington Meeting.

The rate of a fare and one third has been again
secured for the annual meeting of this society, to be
held in Washington, D. C., January 28, 29 and 30,
1907.

This is on the certificate plan. All you have to do is
to be on hand about fifteen or twenty minutes before
your train is due; ask the agent for a certificate for the
meeting of the American Carnation Society; pay full
fare going and you can then return for one-third of a
full fare.

As the two cent rate is in effect in quite a num-
ber of States, this will make a very cheap rate for this
meeting, and no carnation grower who consults his own
interests can afford to miss it.

Premium lists have been mailed to all of the mem-
bers; any one who wishes a copy can obtain same by
applying to the secretary.

LANCASTER, Pa.

ALBERT M. HERR,
Secretary.

The average American citizen firmly believes that he
could be an editor. Of course, any man or woman, in
his or her own mind, could conduct his or her favorite
newspaper (or trade paper) a great deal better than the
people who devote their entire time and give all their
experience to the task. All that is necessary is—well
to edit! Don't you see?—Julius Chambers in Brooklyn,
Eagle.

Mr. Chambers is right. Nevertheless, we for our
part always welcome correction or criticism. If you
have views different from those appearing in our
columns, whether on matters of cultural treat-
ment or otherwise, which your experience or knowl-
edge convinces you are more correct than those
stated, don't hesitate to send them to us for publica-
tion. It is only right that the soundest informa-
tion on any and every subject be promulgated. Even
if some item you read causes you to write in your
haste what you would be ashamed to father a
your leisure, send it in; we enjoy such, and may
 glean some helpful hint from the wrathful produc-
tion. Don't be, as some are, who have more leisure
time at their disposal than usual, too hypercritical
or puerile, however, and get irritable over some
manifest and unimportant typographical error the
has escaped our vigilant eye. All such are usually
detected by us—later—and therefore your energy
along that line is wasted and nobody is benefited
thereby. Above all do we appreciate calm, well
considered constructive suggestions, the adoption of
which will be mutually beneficial to our readers
and ourselves. Tell us, in your own way, how you
would do things for the general good were you in
our place.

Obituary

Alfred Plant.

Alfred Plant, president of the Plant Seed Company, St. Louis, Mo., died on December 28, 1907, at his home in Webster Groves, after an illness of eight months. The funeral was held on Tuesday morning, December 31, interment in Bellefontaine Cemetery.

Mr. Plant was 87 years of age. He was born in Lancaster, Mass., and attended Yale University from 1843 to 1847. In 1856 he entered the employ of Plant Brothers, seed merchants, subsequently becoming head of the firm. He was well known by the local trade who extend their sympathy to those who are left to mourn his loss.

Everett B. Clark.

Everett B. Clark, president of the Everett B. Clark Seed Company, Milford, Conn., died on December 23, at Darlington, S. C., after an illness of four hours. He had gone South on a hunting trip.

Mr. Clark was born in the town of Orange, Conn., 61 years ago. On returning from the Civil War he took up the growing of seeds as a business, and had continued in it ever since, confining himself strictly to the wholesale trade.

The firm, at which he was at the head, has now about 100 acres in cultivation, growing most of the staples for which New England is noted, its specialty being sweet corn, in which line the products are famed the country over. He was considered one of the most successful of American seed growers, and his stocks were noted for their high standard of excellence.

Mr. Clark had been connected with the American Seed Trade Association since its inception, and was elected its president in 1898. He was a man of sound judgment, calm and deliberate in all his actions and possessed of a great deal of executive ability. His sons, who have had active charge of the business in recent years, will continue it along former lines.

Reuben H. Warder.

Reuben H. Warder, superintendent of Lincoln Park and secretary of the Park Board, Chicago, died on Thursday evening, December 26, 1907, in his apartments at 50 St. James place, in that city. Mr. Warder had been ill for the last eight months, but performed the duties of his office until Tuesday, when he was compelled to take to his bed.

He went to Chicago to accept the position in the park in June, 1901. He had filled a similar position in the parks of Cincinnati, O., where he was born sixty-four years ago. He was a son of Dr. John A. Warder, a noted horticulturist, who published "Warder's Hedges and Evergreens." Mr. Warder studied landscape gardening under his father, and traveled a good deal, investigating horticultural experiments. After his appointment he did much to improve the appearance of Lincoln Park, which was extended from its original size of three hundred acres to the six hundred-acre tract it now occupies. He also developed the driveway along the lake shore into the magnificent thoroughfare it now is.

Deceased was a skilled horticulturist, and the value of his services to the people of Chicago, who receive from him an inheritance of beauty, will be dearly prized for many a year.

Mr. Warder is survived by a brother, John H. Warder, secretary of the Western Society of Engineers, and one sister. The body was taken to Cincinnati for interment in Spring Grove Cemetery.

Frank W. Sempers.

Frank W. Sempers died at Baltimore, Md., December 15, 1907. He was a son of the late Dr. Charles T. Sempers, of Philadelphia, Pa., and was born 51 years ago at North East, Md. His educational opportunities were early interrupted, due to disabilities incurred by his father in the Civil War. Though forced by circumstances into a mercantile calling at a time when the average boy is going to school his spare time and energies were assiduously occupied in following the scientific instincts which ultimately resulted in his becoming a chemist by profession.

He was also greatly interested in horticultural work and was the author of a number of publications dealing with the chemical and other aspects of the subject, particularly a work on fertilizers, written while in the employ of W. Atlee Burpee & Co., Philadelphia. He subsequently established at Blythedale, Md., the first commercial seed laboratory in this country, with an annual capacity of 25,000 continuous tests. His death, the result of excessive overwork, was directly due to progressive paralysis, which followed a complete collapse five years ago. Mr. Sempers was unmarried.

The Late John Clark, His Father, Wife and Children
From a Photograph taken in 1901.

John Clark.

John Clark is gone and we can hardly realize that the kind and jovial man, whom all he came in touch with liked so well, is no more. It was a dreadful calamity that carried off Mr. Clark, his wife and three children, early Friday morning of last week, when their home at Watertown, Mass., was destroyed by fire.

The fire started evidently by the explosion or upsetting of a lamp which was kept burning in the hallway. From the position in which the bodies were found it is certain that the father made a heroic effort to save the lives of the two sleeping boys, who were in an adjoining room, he having evidently dashed through the flames, coming up the open stairway. He had one boy in each hand when he succumbed to the dense smoke

The Late Everett B. Clark

and flame. His mother and the two girls were in the front of the house, the parents of the boys were in the rear of the house, and the father made a heroic effort to reach the stairway, but he was unable to do so, and perished with the boys.

The lower part of the house, which had been burned, was not burned to the same extent as the upper part.

His brothers and father went to Boston, U. S., and found that everything had been done as kindly as possible and friends that could be done.

Mr. Clark was born at Edinburgh, Scotland, October 10, 1863. After leaving school he served an apprenticeship of a few years with Messrs. Sang & Sons, seedsmen, Kirkcaldy. Coming to the United States when about 18 years old he was employed for a short time with Peter Henderson & Company, New York. Leaving there he went to Washington, D. C., engaging in business with his brother, William S. Clark. He did not seem to fancy the florist business and returned to Peter Henderson & Company, from there he went about 12 years ago, to Messrs. Joseph Brock & Sons of Boston, Mass. He also served a short time with Mr. Thos. J. Grey and W. W. Rawson & Company. When the latter firm was burned out over a year ago he threw in his lot with the H. A. Fiske Seed Company, Boston, Mass., with whom he was employed at the time of his death.

He married, 12 years ago, Fanny E. Howser of Washington, D. C., who with their children, John, Jr., aged 11; Philip, aged 7; and Doris, aged 4, all perished on the night of December 26.

Mr. Clark was well known among all the gardeners and florists in Boston. He was of a kindly disposition and a genuine home lover. He was a Free Mason, a member of the Royal Arcanum, of the Gardeners and Florists' Club and the Massachusetts Horticultural Society. His father, John F. Clark, is known to all who visit the Botanic Gardens at Washington; two brothers, George D. and James, are with Henry A. Breeer, Philadelphia, the former in the seed store, the latter at the Riverton establishment. Another brother, William S., is a florist in Washington, D. C., and one also lives in Scotland. The funeral on Sunday afternoon, December 29, which was largely attended by members of the horticultural trades, was indeed a sad occasion. The services though brief were impressive. There were many fine floral tributes, notable among which was a very handsome design from the allied seed trades of Boston, another from the Boston Co-operative Flower Market, and the regular emblem from the Gardeners and Florists' Club. The interment was in Ridge Lawn Cemetery, Watertown, Mass.

The father, the brothers, and their families, desire to express to the many friends of the deceased their deep appreciation of many expressions of sympathy and acts of kindness of which they have been the recipients since the tragedy.

Francis Quinlan.

Francis Quinlan of the firm of Quinlan Brothers, florists, 11 Summer street, and one of the best known citizens of Lynn, Mass., died at his home, 76 Johnson street, on Saturday, December 28, 1907, of Bright's disease, after a lingering illness. Mr. Quinlan had been ailing for two or three years, but it was only a few months ago that he was obliged to take to his bed. He fought death bravely, but the ravages of the disease were such that his fight was a losing one, and he finally succumbed, surrounded by members of his family.

Mr. Quinlan was Past President of the localerie, and at one time was an organizer for the Eagles, and in this capacity gained a large circle of acquaintances all over the country. He is survived by his mother, three sisters and two brothers.

Francis Quinlan was born in Charlestown, Mass., in 1859. He attended the public schools and graduated from the Prescott Grammar School in 1879. He then started to work for E. & J. Bowditch, civil engineers of Boston. At that time he had charge of the landscape gardening department of that firm and laid out the grounds of some of the largest estates in the country. Among them were the estate of T. W. Pierce of Topsfield, Mass., and the Vanderbilt and Galet residences in Newport. About 20 years ago Mr. Quinlan started in business for himself in Salem and one year later he moved to Lynn. He also had a store in Charlestown and large greenhouses in East Medford.

Mr. Quinlan was a prominent club man and former president of the Everett Club. He was also Past Exalted Ruler of the Lynn Lodge of Elks, a member of Peter Woodland Lodge of K. of P., the Nanepashemet Tribe of Red Men, former Chairman of the House Committee of the Aher Ego Club, Allan Dale, F. A. M., Boston Florists and Gardeners' Club, and was one of the charter members of the defunct Lynn Press Club. In addition to his large florist business he was a dealer in real estate. About five years ago he purchased a large tract of land on Orient street, in Swampscott.

In 1903, Mr. Quinlan was appointed State Deputy Grand President for Massachusetts of the Fraternal Order of Eagles by Grand President Congressman Timothy D. Sullivan, of New York.

AMONG THE GROWERS

Carrillo & Baldwin, Secaucus, N. J.

The firm of Carrillo & Baldwin, orchid collectors, growers, and importers, of Secaucus, N. J., through George E. Baldwin, who is generally to be found at their establishment, express entire satisfaction with the amount of business done by the concern during 1907. Over 600 cases of orchids were imported during the year, all the plants in unusually fine shape. Among the contracts completed during the season was one for stock to fill three large greenhouses at the establishment of Kromitsch & Junge, in Secaucus, N. J., as described in a recent issue of this paper.

The Carrillo & Baldwin establishment embraces eight large houses, some of them at this time well in crop, and contributing largely to the supply of cut flowers for the New York market. A house filled with plants established just 18 months is an object lesson for anyone about to enter the orchid growing business. The plants were all imported stock as it arrived from the collectors.

Mr. Baldwin is always ready to impart his knowledge to visitors, and his advice to beginners is particularly practical. A brief conversation with him a few days ago on the subject of "How to Commence Orchid Culture" is deserving of record. He said: "Almost any style of greenhouse will answer for orchids. It is not necessary that a house be of a special construction, nor have special heating facilities, a service which will give a temperature of not less than 55 degrees at all times being all that is required.

"The selection of varieties from a cut flower stand-

are two methods of starting; one is to procure newly imported stock; the other to get wholly established plants. Of course, where expense is an object and a beginner is willing to give the attention required by the stock the newly imported plants are all right. But where he wishes to enter the business with the least possible risk, and when expense is not so much to be considered as speedy returns, he should begin with the wholly established stock. Cases are on record where by following the latter course it has been possible to get a crop during the first season, which has in a large measure reimbursed the grower for the first outlay.

"On receipt of the stock in wholly established form all that is necessary is to fill up the benches assigned to it and grow it along. With semi-established or newly imported stock, which comes in cases just as imported from the tropics, the first step is to lay out the plants in a shady place in a greenhouse where it is not possible for the sun to strike it. See that it lies loosely on the ground. Under the benches is as good as anywhere. In this way the plants get moisture from the ground and soon assume a green and healthy appearance; the bulbs start to plump up and lose their shriveled appearance, which latter is due to their being in the cases during transit for so long a period. When in good growing shape they may be potted, the sizes of pots running according to the sizes of the plants, seldom larger than 8-inch and averaging 5½- and 6-inch. The smaller the pot used the better.

"Opinions differ as to the best material to be used for potting, but generally it may be said that osmunda fiber, which may be obtained from any orchid firm, is as good as anything. Fill the pot a quarter to one-third full of crocks for drainage, and then pack with the fiber

florets; now they have gone back to those with the incurved florets. It is not the perfect, well-finished exhibition blooms that are wanted, but those of moderate size, with the florets not so closely packed. Buttercup as grown for market is very pretty. Eudlome Poitevine is another good yellow, also Madame Rivoire. In whites Mrs. Judson was well shown, and this is the best incurved white we see in the market. The crimson incurves do not take so well, as it is only the bronze reverse that is seen. Violet Lady Beaumont is most appreciated as a late crimson. Guy Hamilton secured first prizes in two classes; owing to the long loose floret it is bad for packing and some growers do not like it, yet when properly handled it is a good thing. There is no better yellow than Nagoya. H. J. Jones showed a good yellow sport from Western King which should prove useful. Madame R. Oberthur was one of the finest Japanese whites shown. Tuxedo is still a favorite bronze. Lord Brooke is a better variety, but it is not all growers who succeed with it. In pinks Framfield Pink and A. J. Balfour were the best. Golden Age was one of the best deep yellows.

I find that most market growers like to try new sorts, yet it is remarkable that varieties which were grown over thirty years ago still hold their own. Some of the old incurves are being revived, and W. H. Lincoln, which was grown nearly forty years ago, still remains a favorite. Some of the best pot plants seen in the market have been of this variety. Niveus has been one of the best whites for pots; Guy Hamilton has also been good. Lord Brooke is one of the best bronzes for cutting, but it does not make quite such a good pot plant as many other varieties do.

The show of market varieties was far more instruc-

Treatment of Cattleyas on arrival from Tropics

Cattleya Trianae

Orchids at the Establishment of Carrillo & Baldwin, Secaucus, N. J.

point is, of course, important. The prime requisite is a stock which will give a plentiful supply of flowers at all seasons, consequently cattleyas are the most favored. A selection may be made from the different varieties to give a regular succession throughout the year. December practically marks the beginning of the cattleya year. Cattleya Trianae is in bloom from December 1 to February 1. Then may follow *C. Schroderae*, which comes into crop in February, and continues until after Easter, and is the only cattleya available during the Easter holidays. *C. Mendeli* follows, with *C. Mossiae*, which varieties are in crop until about June 1, and are succeeded by *C. Gaskelliana*, which is in cut until August, with *C. zigas*, which flowers during the same period. *C. Dowiana* follows with *C. labiata* and *Penduliana*, thus bringing the flowering period along until *C. Trianae* comes in again.

"These varieties of cattleyas represent the recognized commercial class for cut flowers. In addition may be selected *C. Warneri*, which is a magnificent orchid, flowering in early Spring. It is not a variety commonly met with in commercial establishments, because of its slightly increased cost, due to its scarcity; but where one is able to get stock there is ample repayment accruing from the great profusion of the variety, and its color, which is similar to that of *C. labiata*, and is not rivaled in any other cattleya flowering in its season. *C. Harrisoniae* is another orchid which is excellent for flowering during the season May to July. It bears a very compact flower, and runs seven to twelve blooms to the spike.

"After making a selection the beginner should take careful steps to secure his stock. There

until it is quite firm in body. This is very important, as when loosely packed the plants are not likely to thrive, due to too great aeration. The roots may be trimmed a little, but be careful to leave sufficient to allow of plants being firmly held in the pots; pack them tightly into the fiber. To start growth give them a daily overhead syringing twice a day, when new roots will soon begin to appear at the bases of the bulbs. They will not at first need much water in the pot, but after the roots have well started they may be given liberal watering two to three times a week. They like water, but care, of course, must be exercised that they do not get too much. Their appearance will generally betoken an excess of water. When the flowering sheaths form very little overhead syringing need be done, as it is apt to rot the sheaths.

"Great latitude is possible in the cutting of the flowers; they are not harmed if allowed to stay on the plants two or three weeks after they are ready to cut."

Our London Letter.

BY A. HEMSLEY.

CHRYSANTHEMUMS.—We have now finished with the chrysanthemum shows for the season. The market show held on December 11, though not quite as good as some we have seen, was instructive. One feature was the number of incurved varieties shown by the market growers. A few years ago all our florists favored the Japanese varieties with the long drooping

flowers than the ordinary chrysanthemum exhibitions, and a great feature was that the exhibits included a good many of the varieties which for competition are grown to a great size with one or two blooms on a plant, while for market they must have from at least 6 to 12 blooms to be profitable.

THE WINTER-FLOWERING CARNATION SOCIETY'S show which was held at the Royal Botanic Society's gardens on the same date, December 11, attracted a large number of trade growers and was in every way a great success. There were few special novelties. Some of the newer American varieties were awarded certificates of merit. Of these Beacon, Melody, Aristocrat, Rose Pink Enchantress and Winsor gained the distinction. Taking the varieties in special colors White Perfection was a long way ahead in the class for white; Britannia took first place in scarlet, Robert Craig being a good second. For blush pink Enchantress was the variety which gained first, second and third prizes. Melody was shown in this class, but failed. In crimson it would be difficult to say which was really the best, for honors were divided, Harlowarden, Governor Roosevelt, President and Harry Penn being of almost equal quality. For deep pink or cerise, Mrs. T. W. Lawson came first in one class and Aristocrat in another. Helen Gould secured first honors in one class for a fancy variety. Mrs. H. Burnett was well shown by several exhibitors and an English grower beat the raiser who comes from Guernsey. It was known that there would be several growers from the Channel Islands, and some English growers were afraid to compete against them, but take the show all through those English growers who did show held their own very well.

LEGAL

A Cold Storage Case.

Julius Roehrs' Exotic Nurseries, Rutherford, N. J., will celebrate the present holiday season with a check for over five thousand dollars, recovered through its attorneys, Hatch & Clute, of 100 Broadway, New York, in a lawsuit which involved points of great importance to florists and cold storage men.

The decision in favor of Mr. Roehrs has just been

Towell's Seedling Crimson Carnation
Number 28

unanimously affirmed on appeal by the Appellate Division of the Supreme Court in New York, and the substantial sum of money turned over by the storage house to make good the loss caused by the sprouting of lily of the valley pips.

It appears, from the record on the appeal in the case, that in the Winter of 1903-04, Mr. Roehrs received about a million lily of the valley pips from well-known German florists. He used about half of the pips in question, at his nurseries in Rutherford, N. J., during the Winter of 1903, and about the middle of March, 1904, he stored the remaining half million pips with the Manhattan Cold Storage Company, New York. The following Summer Mr. Roehrs discovered that the pips, while in the storage warehouse, had sprouted and were growing. He immediately caused an investigation to be made by his lawyers, who represent a number of

local florists and who have given special attention to the legal rights of the trade in the matter of the very heavy losses which have been sustained through the careless storage of goods. As a result of this investigation the demand was made upon the storage company to reimburse Mr. Roehrs for the loss of the pips, and this demand brought about a test of the respective right of the florist and the storage house, under the circumstances disclosed.

It was claimed, on behalf of the storage company that its legal obligation was not to "preserve the goods," in the absence of a special agreement for a specific temperature, and that, as Mr. Roehrs could not establish what occurred in the storage warehouse, he could not recover. It was also claimed that the condition of the goods at the time they were received from Europe as well as their condition at the time they were stored was in doubt, because not all of the boxes were examined at Mr. Roehrs' place.

So important were these points to the trade generally that Mr. Roehrs determined to fight the case to the end, and on the trial many well-known florists and growers of lily of the valley testified as witnesses. Mr. Roehrs' attorneys succeeded in getting before the jury the temperature records of the storage company, which contained some damaging evidence in the way of temperature rises, which experts said were too high to preserve the bulbs. It was also shown that the goods of several other dealers stored there during the same period were found to have sprouted.

Expert storage men were brought from Philadelphia and other cities, who testified that the storage plant of the defendant was constructed according to the most modern plans and was equipped with proved refrigerating machinery; but there was strong substantial evidence offered to establish some special carelessness and oversight on the part of the storage company, during the Spring of the year in question. A sufficient rise in temperature was indicated to start the bulbs from their dormant state, and it was proved by the testimony of experts, that when once the pips had sprouted their growth could not be stopped or retarded without destroying them. This evidence convinced the jury, which decided in favor of Mr. Roehrs, and they brought in a verdict for the full value of the goods. The court ruled against the storage company, on the point which was made by its lawyers, that all of the boxes of the goods should have been opened and examined by the florist before the goods were placed in storage. The court sustained the contention that only a reasonable examination, in ordinary course of business, is necessary.

It is needless to say that the defendant storage company, and other companies in the same line, will take special notice of this case, in the future conduct of their business, and it is also apparent that the decision will attract much attention from florists, who cannot fail to benefit largely by the protection which this decision affords them.

American Rose Society.

The commendations received by the secretary of the American Rose Society from the life members of the organization who have received their certificates, show that these very handsome parchments are highly appreciated.

The Chicago Rose Society, an American Rose Society will open on Wednesday, January 1, 1908, that is, the 25th day of March and will give prizes. The Chicago Florists' Club will also give prizes, all to be held at Marshall Field's on the 4th day of January.

The Rose Society has announced the following schedule of prizes. In Division 1, 1st prize, prizes are thrown open for support from all America that has a good word or wish for roses.

Some fine papers will be read at the meeting. BENJAMIN HAMMOND, Secretary.

Towell's Seedling Pink Carnation Number 4

Towell's New Carnations.

Joseph Towell, Paterson, N. J., is cutting from an extensive benching of two new seedling carnations which appear to be more than ordinarily promising. A pink, known as seedling Number 4, is the result of a cross between Enchantress and Joseph H. Manley. It is very pleasing in color, somewhat lighter than Mrs. T. W. Lawson. The flowers have attained a diameter of as much as 3 1/2 inches and are well formed. The plants show unusual vigor in growth, and throw up stiff and strong flowering stems of excellent length. The variety, as a profuse bloomer, leaves little to be desired.

The other seedling is a crimson; it is known as Number 28, and is a cross between Harry Fern and J. H. Manley. It is a profuse bloomer, with a vigorous habit of growth, good stem and calyx. Both varieties will probably be disseminated.

Vase of Flowers

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYEE, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOEAL CO., 1706 Broadway, J. A. Valentine, Prest. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Dayton, O.

W. G. MATTHEWS, FLOEIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BEBTEEMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

A Seasonable Wedding Decoration.

One of the most important weddings of the season took place the day after Christmas, and in spite of the general feeling of lassitude that prevails after a big holiday rush, the decoration was a distinct success and one of the most brilliant of the season.

The usual Christmas decorations were left in place. They consisted of large spruce trees, pine roping, etc. In addition to these, either side of the chancel was banked with large palms reaching to a height of thirty feet. Poinsettias and lilies were used in large numbers, the large double flowering poinsettia being employed exclusively. We find these plants far superior in every way for decorative purposes; if they are once properly hardened up they will retain their freshness for days without wilting. The whole chancel right back to the altar was a mass of these brilliant subjects; they were arranged in groups and clusters relieved by numbers of lilies. Large vases of lilies stood on the altar, the background being formed by a mass of Adiantum Farleyense. The altar rails were draped with strings of Asparagus plumosus, relieved by

table brightened with sprays of the red-berried black alder, and poinsettia bracts. The whole room was festooned with Princess pine roping, from which were suspended large red balls made of red wood ribbon, and lighted by electricity. The guests were ushered into a perfectly dark room and seated; at a given signal the lights were turned on, and the effect was most startling and novel.

A Christmas Novelty.

One of the best novelties seen in the New York stores this Christmas were araucarias decorated and lighted ready for use as artistic Christmas trees or for table decoration. The most attractive method of doing this is to tie ribbons throughout the branches. A red and green ribbon was used in this case, tied in small bows and looped from branch to branch. A number of small red bells were also tied to the branches and the tree lighted with very small electric bulbs. The dry battery was hidden beneath the lower branches of the araucaria. They made excellent centerpieces for Christmas tables, and were also used as small Christmas trees.

A quick method for making a large cross was observed this week. The cross was to be placed on a grave as a Christmas remembrance. A large frame five feet high, with slanting arms, was mossed up. Princess pine roping was used; this was simply wound around the frame and fastened here and there with wire, enough pine being stemmed on sticks to finish off the top of the cross and the ends of the arms. The effect when finished was a massive cross of green. A large wreath of red immortelles was placed over the arms and tied on with a broad bow of ribbon of the same color. Heavy wires, about one foot in length, extended from the base of the cross for the purpose of fastening it into the soil. D. RAYBUN.

A Christmas Rhododendron.

Editor Florists' Exchange:

We send you a photograph of a rhododendron (here-with reproduced) which we had in bloom for Christmas. The plant had 50 flowers also as many buds to come in bloom. We received it from Belgium about six weeks ago, and it was the only rhododendron known to be in bloom for Christmas in our city.

M. COOK SONS.

New Orleans, La.

Carnation Lloyd.

(See page 13)

This sterling new white carnation originated five years ago at the establishment of H. A. Jahn, New Bedford, Mass. It is a pure white, very fragrant, and the beautiful flowers, which easily measure 3, 3½ and very often 4 inches across, are borne on long, stiff stems of from 18 inches to 36 inches. It is a pedigree seedling, with Lawson blood in it. It can be truthfully called the florists' flower. It will stand the most neglect, and a lower temperature than any other carnation the writer knows of. In all of the ten thousand plants grown by Mr. Jahn very few split flowers were seen; in fact, the houses have sometimes got as low as 42 degrees and once or twice down to 34. And when it is taken into consideration that the houses here are old, with very small glass, what would this variety do in a modern establishment with every advantage? To show the free-blooming qualities of the Lloyd, the introducer the first year from the original plant picked 65 blooms, again last October from 10,000 plants the cut for one day was 3,000 blooms. Mr. Jahn is now picking 1,800 blooms weekly; these are shipped to Boston where every single flower commands the fancy price of 6c.

A dozen blooms of this carnation make a handsome bunch. The florists around here are investing heavily in this novelty. Chatterton Warburton of Fall River, will grow about one thousand plants of it for next year, and S. S. Peckham, the Fairhaven carnation specialist, will grow 500 plants of it.

At the exhibitions in Boston and Newport it easily outclassed all other varieties, and was the admiration of all who saw it. The garden committee of the Massachusetts Horticultural Society, who visited Mr. Jahn's greenhouses, were much impressed with this variety. It is all the introducer claims for it; in fact, the description is too modest—a good honest free and ever-blooming clear white carnation, very easily rooted, fragrant, excellent keeper and shipper, size and stem of Enchantress, with the freedom of bloom of Lizzie McGowan, not a cropper, always in flower.

The illustrations herewith show a house of this new variety, and a vase of flowers, which does not do half justice to it. New Bedford is about 56 miles from Boston, some two hours' ride.

HORTICO.

GENEVA, N. Y.—The Chase Nurseries have been incorporated with a capital stock of \$6,000; incorporators, George M. Chase, Thomas H. Chew, and Lausing G. Hoskins, Oswego, N. Y.

Rhododendron for Christmas

Growers, M. Cook Sons, New Orleans, La.

bunches and sprays of gardenias. To each pillar of the church a large Christmas tree had been fastened; a bunch of poinsettias tied with red ribbon was added to each one of these. At every other pew up the center aisle was fastened a basket of scarlet carnations, and lily of the valley.

The house was simply decorated with palms and ferns, American Beauty roses being the only flowers used. These were employed in great profusion. The bride received under an immense specimen kentia; a huge urn of American Beauty roses standing on either side gave a very classic effect. The same rose was also used among the palms to screen the musicians, and on the buffet table.

A Christmas Table Decoration.

Among the many decorations seen this Christmas the following was one of the most attractive. A large round table was set for thirty people. In the center of the table a large pyramidal English holly was placed; five smaller bushes occupied equal spaces near the edge of the table. These hollies, which were a mass of berries, were wired and lighted with numbers of miniature electric lights. They were also connected one to the other by garlands of holly and mistletoe, made over electric wires, lighted every few inches by red and green electric bulbs. A mass of holly covered the

Growers' Problems Solved by U. G. Scollay.

I am thinking of building one or two houses to grow a good plants for the market such as carnations, chrysanthemums, violets, button chrysanthemums, etc. I intend putting up four 100 foot long by 20 feet wide. At first I will erect one house, 100 x 20 feet even span. I can get an old marine boiler that was rated at 4 or 5 horse power, a large fire box, as wood was used as fuel. Could I utilize this boiler, burning coal, for hot water and would it heat one house 100x20 feet and 10 or 14 feet to ridge? I intended putting 5 rows of 1 1/2-inch pipe, one on each side, and one flow pipe, 2-inch, on each side of the house. Would that be sufficient to keep the temperature up to 55 degrees? The climate here is not severe, the thermometer rarely going to 20, and when it does only for a night or so. I have a large horizontal boiler of under-mentioned dimensions, that is not in sufficiently good condition to use for steam, but is in good enough order for hot water. Please give an opinion on this boiler for use in greenhouses. The boiler has 10 2 1/2-inch flue tubes, and fire box, 4 feet 6 inches x 2 feet 9 inches x 3 feet high. Could this boiler be used economically for coal to heat by hot water, say three houses, 100x20 feet x 10 feet high. The boiler first mentioned is, of course, much smaller, but of the same style as the latter. The freight on boilers is very high here, but coal is high also, so unless the boilers could be used economically it would not pay to use them. Could the boilers be stoked to last say 8 or 10 hours, at night?
H. B. D.

British Columbia.
The small boiler would be crowded pretty hard to carry the house 100x20 feet to 55 degrees, but it could be done on a pinch. I would advise you to place six rows of 1 1/2-inch pipe in each side and feed the six pipe coils with one 2 1/2-inch instead of a 2-inch flow. You will get better results if you do. Even though you may not have very severe weather all the time, when you do have it you want to be prepared for it.

The large boiler mentioned has ample capacity to heat the three houses 100x20x10 feet. If you propose to use the large boiler for hot water, plug up the steam dome and have special connections put on the top of the shell for your hot water mains. The same can apply to the returns. The circulation of your boiler will be much easier if this is done. In case you use the large boiler on the three houses for a temperature of 55 degrees, I would recommend that you have 3-inch main capacity for each house at least; 3 1/2-inch would be better, and it will simplify your work, possibly, if you had the boiler so arranged that you could have three flow and return openings placed on each. You would then save the trouble of running larger pipe than the sizes mentioned.
U. G. SCOLLAY.

Moninger on Money Matters.

The John C. Moninger Company, Chicago, has issued an attractive souvenir in the form of a representation of a bank book containing a fac-simile certificate of deposit for a thousand. Within is given some pertinent and opportune advice on the subject of money. It is also stated "We honestly believe that the florist who builds for next year will make more money than he ever did before on the same amount of capital invested. Don't be scared, but be wise and get ahead of your neighbor. The pessimist never did make money, but the optimist always succeeds." The advice is also given to use the firm's material in building operations.

NEWCASTLE, PA. The death of George C. Butz, a native of this town, occurred on December 14, 1907. He was born on February 1, 1833, and was on the staff of the horticultural department of the Pennsylvania State College, which conferred the degree of M.S. upon him in 1888. Mr. Butz was the author of several horticultural books.

ST. LOUIS, MO. The executive committee of the St. Louis Horticultural Society met recently at the Missouri Athletic Club. Preparations are making for the annual meeting in January, and the question of a Spring flower show is being considered.

FOR SALE—Second-hand boilers. ASPARAGUS Plumosus, 2 1/2 in., \$2.50 per 100.
PLAINFIELD GREENHOUSES, Plainfield, Conn.

WORCESTER, MASS.—The florists report an unusually good Christmas season. There was a good demand for potted plants and all kinds of green materials. *Poinsettias* were favorites. Box-wood balls were also popular and sold well.

Azaleas had a big run, likewise *Jerusalem cherries* and *holly*. *Mistletoe* of the better quality found a ready market. Prices as a whole were about the same as last year's, excepting for *violets*; these were much higher but of fine quality. In addition to the heavy Christmas trade there was much funeral work.

Lewis reports his first Christmas in Worcester as something great. Mrs. May Fisher was rushed. H. E. Littlefield with his two stores was forced to work several times all night. C. D. Mackie says trade was 20 per cent. ahead of last year's. With him the larger plants sold better than the smaller ones, palms and ferns being in the lead. Hundreds of globe ferneries were disposed of. The Worcester Conservatories, L. C. Midgley, manager, prior to Christmas cut nearly 25,000 carnations of fine quality. Their roses are a little off crop but are beginning to come in. Mr. Midgley has lately bought the Mrs. Potter Brown place of 75 acres in Westboro. There was on this establishment about 5,000 feet of glass which Mr. Midgley has filled with carnations. In the near future he contemplates building more houses on this new acquisition.
 CAROLUS.

Christmas Trade, 1907

(continued from page 9.)

ST. LOUIS.—From reports gathered by your correspondent, it can be safely said that the Christmas business this year was fully up to that of last year and in some cases even better. Our commission men, four in number, say the rush for stock on Monday, Tuesday, and Wednesday was as large as at any previous Christmas in their experience. *Roses*, carnations, *violets* and bulbous stock sold at good prices; the only thing that seemed to be in plenty was cut *poinsettias*. All of the salesmen were loaded down with extra fine quality of these, but they would not move at \$3 to \$4 per dozen. *American Beauty roses*, choice, sold well, the top price being \$12 per dozen and not any too many at that. The \$8 to \$10 per dozen grades went better and more of them, shorts too, sold clean. *Killarney*, *Richmond*, *Bride*, *Bridesmaid* and *Mme. Abel Chateau*, in fancy grades, brought \$15 per 100 and from that down to \$6 for shorts. Everything sold out clean.

Enchantress, Mrs. T. W. Lawson, Cardinal, *White Perfection* and *Pink Enchantress* carnations, in fancy, sold fast at \$8 per 100, in lesser grades at \$5 and \$6. Nothing in carnations was sold under \$4 per 100.

California *violets* were fine and arrived in large lots; these cleaned up at \$1.50 per 100 for the best. The market was well supplied with bulbous stock of all kinds; the prices on these were not advanced.

All kinds of greens went well, with plenty of *smilax*, *asparagus*, *adiantum* and *galax*. *Holly* was a money-maker this year; many of the florists were caught napping by not ordering in advance, as the price went up as high as \$4 per case.

Among the West End florists, who expressed themselves that the Christmas trade was better than they expected, were *Waldhart*, *Ayers*, *Newman*, E. C. *Weber*, *Townsend*, F. H. *Weber*, *Ellison*, *Kalish*, *Windt*, *Sanders* and *Alex. Waldhart*. They say trade was exceptionally large in plants of all kinds. Cut flowers, though high in price, sold as well as ever. The downtown florists had all they could do with cut flower orders; and in greens and *holly*. Among those who did as rushing trade were C. Young & Sons, Miss *Baldarone*, J. J. *Beneke*, *Foster Floral Company*, *John Burke*, *The Riessen Floral Company*, *Alex. Siegel* and *Ostertag Brothers*.

The craftsmen in the southern part of the city who have greenhouses all say that the hard times occasioned by the constricted money market were not apparent with them. *Charles Beyer*, *Schray* and *Son*, *Kruse*, *Engelberg*, *Fillmore*, *Windler*, *Bergestermann* and *Meyer* all claim that trade was good in all lines. The weather too was favorable to delivery of plants.

In North St. Louis the *Bentzen Floral Company*, *Mullamphy*, *Huetteman*, *Koenig*, *Meinhardt*, *Brix*, *Schleeter* and *Rotter* say that they had all they could do with orders of all kinds.

ST. PATRICK.

KALAMAZOO, MICH.—Christmas trade here turned out to be all that was expected. A heavy fall of snow during the early hours of Monday effectively put a stop to much business for that day, consequently the trade in pot plants was affected to the extent of one day's sales. Bright cheerful weather on Tuesday and Christmas morning brought out the buyers and by noon of that day most of the cut flowers, *holly* wreaths and green were disposed of. Pot plants did not go so fast, and my impression is that it was more of a cut flower than a plant Christmas than usual. The retailers all appear well pleased with the amount of business done. Prices were well maintained as quoted last week, and these will probably rule till after New Year.

I think the florists averaged about as well as any other business during the holidays, none making any claims of increase over last year's except the 5c. and 10c. stores, which certainly were rushed.

Funeral work and a few good wedding and party orders keep the cut of flowers well used up, and at present writing there is almost a scarcity of good stock. The cuts of most growers continue light, though in a week or two there promises to be plenty, especially if the present favorable weather continues. *Holly* and greens continue to sell as well as ever, but the business in bells appears to have passed out of the hands of the florists. *Novelties* were not offered this season, as I suppose the circumstances surrounding business conditions here did not warrant more outlay than strictly necessary.
 S. B.

NEW BEDFORD, MASS.—Christmas trade was beyond all expectations and everyone was satisfied. Flowers were all cleaned up. Prices were good; carnations brought from \$1 to \$1.25 per dozen retail; roses \$3 per dozen for *Bride* and *Bridesmaid*. *Violets* were rather scarce; \$2 and \$3 per hundred was the price asked, some nice *Paper White narcissus* were seen; these sold at 60c. per dozen retail.

There was a good assortment of Christmas plants such as *azaleas*, *primroses*, *Gloire de Lorraine begonias*, *cyclamen*, etc. E. H. Chamberlin had a magnificent display of *begonias* which sold very readily; he also had some nice *Fire Fly azaleas* which were very attractive.

Win. P. Pierce had a fine window display of plants and flowers. S. S. Peckham had a very heavy cut of carnations; J. H. Cleary handled the entire cut. Mr. Cleary had some nice pans of *Roman hyacinths*. *Chatterton Warburton* of Fall River handled the entire output of H. A. Jahn's new white carnation *Lloyd* for Christmas. There was a good business done in evergreen wreaths; these sold at from 25c. up to \$2 each. Well-berried *holly* was rather scarce here; some of the florists had consignments of *Delaware holly*. R. H. Woodhouse had a grand trade and reports everything cleaned up. E. Y. Pierce reports a splendid Christmas trade in plants and flowers. A. B. Hathaway had a good cut of *violets*, and sold out of carnations. The weather was grand for delivery; the Winter so far has been very mild.

S. S. Peckham is putting in big batches of carnation cuttings in the sand which he will root for the trade. E. H. Chamberlin reports business good after the holiday.
 HORTICO.

NEWPORT, R. I.—There were fully as many plants sold this Christmas as on any previous similar occasion. Flowering plants were in far greater demand than foliage plants. The former were offered in most lines of better quality than usual, while the latter were, on the whole, very poor when considered as subjects for Christmas sales. There were a few very good *Gloire de Lorraine begonias* and they brought a good price; there were also many very poor ones that did not bring any figure. *Cyclamen* were of good quality and proved good sellers; *poinsettias* went rapidly at a very high figure considering the stock. *Ardiasis* were favorites, as usual. *Jerusalem cherries* were scarcely noticed by buyers as compared with the demand for them in years gone by. In foliage plants medium-sized *Boston ferns* of the *Whitmani* variety in particular sold fully as well as anything else. *Araucarias* went fairly well, too, but there were not as many in stock as usual. *Palms* were not in much demand.

Cut flowers were in good supply with the exception of *American Beauty roses*; the demand for the latter was unexpectedly strong and unfortunately the supply in the hands of most dealers was unusually light. Other varieties of roses were on hand in ample supply, but very little stock in that or any other line had to be carried over. *Red carnations* went well at a good price. *Violets* were not called for in such great numbers as usual.

There was as good a demand as ever for Christmas trees, but I doubt very much if on the whole this part of the Christmas business was as profitable as usual; there were far too many trees in stock. *Holly* sold very well as did roping and all sorts of made-up material such as wreaths and balls. An attempt was made at making-up plants in fancy arrangements in imitation of what is so successfully done in New York and other cities, but here with indifferent success; neither party to the transaction is, so far as Newport is concerned, ripe for that branch of the business.
 D. M.

ALLEN TOWN, PA.—Christmas trade in this vicinity was quite good and, I think, on the whole, compares favorably with that of previous years. People began to buy earlier, and the mild weather gave us a better chance to deliver plants in a more satisfactory way. *Horn Brothers* handled a great many bells and had some very fine *holly* wreaths. *Ernest Ashley* was on the market with a fine lot of cut *poinsettias* and white *chrysanthemums*. *Sawyer*, being near the *Union Cemetery*, commanded a good trade. E. N. *Kroninger*, as usual, had some very fine carnations, but, I understand, he ships most of them to New York and Philadelphia. *Andrew Yeager* seemed to do a good quiet trade at his greenhouse.

Grosch Brothers brought to town some very fine pink *chrysanthemums* and Mrs. *Thomas W. Lawson* carnations. A. B. *Ellsworth* had a fine lot of *Gloire de Lorraine begonias*, red *azaleas*, *Nephrolepis Whitmani* and *poinsettias* in pots, and a nice lot of *mistletoe*.

(continued on page 22.)

Always in Demand **ARAUCARIA ROBUSTA**
COMPACTA and **GLAUCA**

JUST LOOK! An **ARAUCARIA ROBUSTA COMPACTA** OR **EXCELSA GLAUCA**, worth a ten dollar bill, perfect shape and color, 6-7 in. pots, 6-year-old, 4-5-6 tiers, 28 to 40 in. in height, the same in width, only \$3.00; 6-7 in. pots, 6-year-old, 4-5-6 tiers, 25 to 28 in. height, \$2.00 and \$2.50, 6-7 in. pots, 5-year-old, 3-4 tiers, 18 to 25 in. high, \$1.50 to \$1.75. **Excelsa**, 6-7 in. pots, 5-6 tiers, 25 to 30 in. high, \$1.50; 6 in. pots, 5-year-old, 5 tiers, 22 to 25 in. high, \$1.00 to \$1.25; 6 in. pots, 4-5 tiers, 4-5-year-old, 18-20-22 in. high, 75c.; 2-year-old, 2-3 tiers, nice little plants, 6-8 in. high, 40c.

WHITMANI, larger than 8 in. pot, planted in 7 in. pots, made up in June, three plants in a 7 in. pot, now as large as a bushel basket, price, \$1.25 to \$1.50 per pot; middle size, 75c.; very heavy specimens, \$1.00 per pot, 6 in. pots 60c. to 75c.

PIERSONI FERNS 4 in., 25c.; 5-5½-6 in. pots, 35c.-40c.-50c.

PTERIS WILSONI, 5¼ in. pots, very handsome, much admired ferns, 20c.

AZALEA INDICA, Have an immense stock now planted in 6 in. and 7 in. pots, were grown for us under contract by an Azalea Specialist in Ghent, Belgium. Have only the leading varieties such as, *Mme. Van der Cruyssen*, (2500 of this well known variety of the finest shape, full of buds), *Niobe*, *Bernard Andrew Allen*, *Deutsche Perle*, *Simon Mardner*, *Empress of India*, *Prof. Wolters*, *Apollo*, and by doz. more popular sorts, price 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75, \$2.00, \$2.50 each.

BOSTON FERNS, Have about 2,500 of this variety, 8 in. pots, made up as big as a wash-tub, worth \$3.00, \$1.25 \$1.50 each; 7 in. pots, as large as abushel basket, worth \$2.00, cut down to 75c. and \$1.00 each; 6 in. pots, very large, worth \$1.00, only 50c.; 5½ in. pots, 35c. and 40c. each.

KENTIA Forsteriana and **Belmoreana**, 4 in. pots, 8 to 20 in. high 35c. 5½ in., 5½ in., and 6 in. pots, bushy stocky plants, 50c., 60c., and 75c.

LATANIA Borbonica, 4 in., strong, 25c. each.

COCOS Weddelliana, 3 in. pots, 10-12-15 in. high, 15c.

ARECA Lutescens, 4 in. pots, made up three plants in a pot, 18-20-22 inches high, 20c. each.

FICUS ELASTICA or **RUBBER PLANTS**, home grown and Belgium stock, 18-20 to 40 in., 5-5½ to 6 in. pots, 25c.-35c.-40c.-50c. and 60c. each; 7 in. pots, 75c.

ASPARAGUS plumosus nanus, 3 in. pots, \$7.00 per 100; 4 in. \$10.00 per 100; all bushy plants.

HYDRANGEA OTAKSA, Now is the time to force *Hydrangea Otaksa* for Easter blooming. Remember only pot grown will form successful for Easter; we grow ours in pots in the summer and plant them in cold frames (grow inside), have about 500 to spare, 6 in. and 7 in. pots 25c., 35c., 50c., and 75c. each.

HEGONIA, new improved *Erffordi*, 4 in., strong, 20c.; 5¼ in., 25c. each.

Please mention if plants are to be shipped with or without pots. All goods must travel at purchaser's risk. Cash with order, please.

GODFREY ASCHMANN, Importer, Wholesale Grower and Shipper of Pot Plants
1012 West Ontario Street, PHILADELPHIA, PA.

ORCHIDS

It is with pleasure that we inform our many friends we shall receive this coming Spring large quantities of imported Orchids, namely: **Cattleyas, Dendrobiums, Oncidiums, Laelias, Vandas, Etc.**

Our facilities for handling large consignments are second to none. We have now in our employ four excellent collectors, including our Mr. Carrillo, who collect exclusively for us. We try to give our customers the best that can be got, sparing no expense whatever.

Our quality and price are now too well known to need further comment—a trial order will prove it.

We carry all the requisites for Orchids, such as **ORCHID PEAT, SPHAGNUM MOSS, BASKETS, ETC.**

TARRYTOWN, N. Y.—The regular monthly meeting of the Horticultural Society was held Thursday evening, December 25, Frank R. Pierson presiding. James Bell and Hector McDonald of Garrison, N. Y., were elected active members. The following officers were elected for the coming year: President, Robert Angus; vice-president, Abel Weeks; secretary, E. W. Neubrand; treasurer, James T. Lawrie; corresponding secretary, L. A. Martin.

James Ballantyne very ably opened a discussion on "Roses Under Glass," after which many of the members took an active part.

The annual dinner will be held at the Florence Hotel on the evening of January 15, 1908. D. McF.

NATICK, MASS.—Percy F. Williams, a graduate of the local high school and of Amherst agricultural college, has left Natick, for Auburn, Ala., where he has secured a position as assistant state horticulturist at the Alabama polytechnic institute. Since graduating from Amherst three years ago he has been in the employ of the State. He enters upon his new duties January 1.

News Notes.

Erhart & Schwarz, in the North Side market, had some good late chrysanthemums for the holiday trade. This firm opened up a store room near the market to accommodate their trade in the evening after the market was closed.

P. J. Demas spent a few days in Chicago last week looking around for stock.

W. Kroeck of the Pittsburg Market had a sad Christmas; his mother died on Christmas day.

The first meeting of the Florists' Club in the new year takes place January 7. Nominations of officers will be held and an exhibit of roses, some of the new sorts, is expected.

E. C. REINEMAN.

Detroit.

News Notes.

John Breitmeyer's Sons decorated Strassburg's Hall on December 26 for a ball given by Secretary of the Navy Truman H. Newberry, in honor of his debutante daughter. The arrangements for this affair surpassed anything previously attempted. All the walls were masked in white marble, also the stairway railings and marble arches were imitated to cover the gallery. Large tubs of artificial poinsettias were on the galleries. At each end of the hall were 5 to 20 foot high white marble columns. Twenty-five cases of smilax were skillfully entwined to relieve the white, while 1500 artificial poinsettias, judiciously distributed, heightened the effect and produced a truly tropical picture. The background represented a view in an old Italian garden, about 10 feet ahead of which stood an antique Roman well which served as a mask for the punch bowl.

President E. A. Scribner has designated three growers and three retailers to grapple with the question as to whether a Spring or a Fall flower show or both should be held. The names of these members are: E. S. Beard, Thomas Brown, Robert Klage, Albert Pochelen, Bruno Schroeder and J. E. Sullivan.

Mr. Scribner is the only one who keeps his faith in automobiles for delivery purposes and has demonstrated that faith by acquiring a new \$1,000 machine.

Wm. Hielscher, the wire worker, is distributing a very handsome calendar.

The Michigan Cut Flower Exchange has started to use its cold storage ferns, and so far every case opened has contained 26 good leaves to every bunch.

FRANK DANZER.

Boston.

News Notes.

Christmas trade generally has been very satisfactory; the amount of business done was considerably over last year's. Azaleas and Gloire de Lorraine begonias were the best sellers among plants, cyclamen sold well as did ardisias. Plants which happened to be a little out of the ordinary sold like hot cakes in many instances.

Business generally was good last week, a great deal of funeral work having kept many of the retailers busy since Christmas.

The sad death of John Clark and his entire family by burning in their home has been the general topic the past few days. Mr. Clark was well known and popular with the trade in general. President Westwood of the Gardeners and Florists' Club has appointed H. E. Fiske, T. J. Grey, and Peter Miller a committee on resolutions on the death of Mr. Clark.

Robert T. McGorum has his roses in excellent shape at present. He had a heavy cut of extra fine blooms of Bride and Bridesmaid for Christmas and continues to send a daily supply of high class flowers to Welch Brothers.

The first traveler for any of the Dutch firms to get around this season is Felix Bosch, representing K. Vethuys, Hillegom.

J. W. DUNCAN.

New Orleans.

News Notes.

A hailstorm of unusual severity for the South did considerable damage to the greenhouses of J. A. Newsham at Magnolia Gardens, and at the Metairie Ridge Nursery Company's plant on Sunday morning, December 22. Mr. Newsham had only just finished rebuilding two houses brought from his Nashville avenue place, and, as he said, the putty was still soft. He will have to replace about a thousand panes of glass; no insurance. The Metairie Company suffered the greatest loss, their breakage amounting to several thousand square feet, besides damage done to growing crops. These were the only florists in the line of the hailstorm within the city, although I hear that two large cucumber growing establishments situated above the city also suffered considerable damage.

In spite of the cry of hard times there was a good business done here in both plants and cut flowers at Christmas. Good flowering plants were rather scarce, but flowers shipped here were rather above the average for this season, and came in good condition. Last year there was not a Christmas tree to be bought after the first few days, but this year they were more than plentiful in all sizes.

CRESCENT CITY.

Rain and Hailstorm in New Orleans.

Sunday morning, December 22, 1907, at about 3.30 o'clock, there came from the heavens above a record-breaking storm as to rain and hail. Really the hailstones were chunks of ice, as large as hens' eggs, and rough, some weighing one-half a pound, breaking one-quarter inch thick and went through hothed sash piled up six deep. The downpour of rain was general all over and around the city, but the hail came over a narrow strip along the upper section and Metairie Ridge. The Metairie Ridge Nursery Company seems to have been in the thickest of it and suffered most. The probable damage to glass and plants at this nursery is estimated at from \$1,000 to \$5,000, with no insurance. Harry Papworth, having carried insurance since the place was established nine years ago and never having suffered any loss, had decided to discontinue the insurance in the early part of this year.

A. T. De La Mare Ptg. and Pub. Co. Ltd., N. Y.

Chicago.

News of the Week.

The cement show which was held at the Coliseum last week offered a good many happy ideas to the progressive florist, not only for outside work, but for inside bench construction. We understand that as is the case with many other commercial interests this show will now be carried out annually.

Promulgating the possibilities of their products the Scientific Special Crop Intense Culture Ranch of Elmhurst, Ill., has issued a voluminous folder with full descriptions of aster Lady Roosevelt, their improved ginseng and the poultry and pheasant department.

Richard F. Gloede of Evanston has settled with the Drainage Canal Commissioners and taken possession of the new property on which he had a previous option.

W. E. Lynch, treasurer of the E. H. Hunt Company, has been suffering from la grippe for the past week. Knud Gundestrup is also another sufferer from the same malady.

C. L. Hutchison, president of the local committee of entertainment of the annual meeting of the American Association for the Advancement of Science, is well known in horticultural circles in this city.

Vaughan's Seed Store reports one of the most successful holidays in recent years. Treasurer Carl Cropp was particularly pleased with the result.

N. J. Wieter of Wieter Brothers is

still supplying the market with chrysanthemums and has a long list of stock plants, which are being shipped to all sections of the country and across the ocean.

From present appearances it seems evident that Myron H. West, now assistant superintendent of Lincoln Park, will succeed the late Reuben H. Warner, who died on Thursday of last week. Mr. West is a young, capable, energetic and enterprising man, full of vim and vitality, and perfectly able to carry out the plans which will be of most value to the park's patrons.

There is still some question as to whether Mr. West will succeed to the secretaryship of the Park Board which Mr. Warner had also held for a number of years. That matter will be decided by the board.

W. K. WOOD

New York.

The Week's News.

The social whirl in this city during the holiday season does not seem to have been a very strenuous one, and elaborate floral decorations for either dinner parties or receptions are few and far between. The New Year did not seem to create any extra demand for either flowers or plants, but we have got accustomed to the fact that New Year's Day does not bring with it any more business than does any ordinary Saturday, so no one is disappointed.

President of the S. A. F. O. H. Frank H. Traendly was in Philadelphia on Saturday last attending a meeting of the board of directors of that society, of which he was a member at the time of his election to the office of president.

Joseph Frank, retail florist at 764 Third avenue, is in the German hospital, convalescing from a rather serious operation; his complete recovery is looked for.

John Young, the popular secretary of the New York Florists' Club, has been appointed a member of the board of directors of the S. A. F. O. H. by President Traendly. It goes without saying that Mr. Young's many friends, both in the wholesale district and elsewhere, will heartily approve of Mr. Traendly's selection.

James Dean, Freeport, L. I., and his daughter Jeanette left on Thursday for San Antonio, Tex. Miss Dean is in ill health, and it is hoped she will be benefited by a stay in the southern state. Mr. Dean himself will remain there a month.

The employees of Vaughan's Seed Store presented Romer J. Irwin an umbrella on Tuesday evening as a token of their respect to him on his leaving to join the forces of the H. H. Berger Company.

The twelfth annual smoker of the Morris County Gardeners and Florists' Society will be held on Wednesday evening, January 8, in Masonic Hall, Madison, N. J.

Daniel J. Mackintosh, florist at 1141 Broadway, has filed a petition in bankruptcy, with liabilities \$8,780 and nominal assets, \$4,406, consisting of stock, \$20, two wagons, \$500; fixtures \$150, and outstanding accounts, \$3,556 from several hundred customers which he has been unable to collect. The largest creditors are Elizabeth Mackintosh, \$3,000, and Richard Gager, \$853. John R. Mackintosh is preferred for \$798, bequest and legacy under the will of Kate Mackintosh. The petitioner has been in business since 1896.

Thomas Knight, recently with the Julius Roehrs Company, and George F. Struck, salesman for Lager & Hurrell, have formed a partnership, and will deal in decorative and flowering plants with offices in the Metropolitan Building, corner Fourth avenue and Twenty-Third street, under the firm name of Knight & Struck.

The stork visited the home of John Scott, Flatbush, N. Y., on the night of December 31 last. It's again a boy, mother and baby are doing well.

Among visitors in town this week were W. N. Rudd, Chicago, Ill.; W. F. Kasting, Buffalo, N. Y.; P. Welch, Boston, Mass.; and Carl Jurgens, Newport, R. I.

Christmas Trade, 1907.

(continued from page 16.)

CLEVELAND, O.—The open Christmas season was responsible for the large demand for cemetery wreaths, of which a great many were sold. The prices were not as high as usual, but more goods were disposed of. The prepared moss wreath has come to stay and is a greater favorite every year. In cut flowers, roses, carnations and violets sold well. Roman hyacinths and Paper White narcissus moved slowly, but were all sold. The Cleveland Cut Flower Company did a bigger business than last year and handled it easier, because of increased facilities in their new store.

The retail florists all declare that Christmas trade was better than ever before. Westman & Getz report an increase of about 50 per cent. over last year; all their cut flowers were sold, and their plant business was phenomenal, owing to the arrangement of simple little blooming plants in baskets of various shapes. Pleasing arrangements of foliage plants in baskets sold extremely well. Crotons and poinsettias in small pans were very much in favor with the buying public.

Simon Anderson, West Park, had some magnificent poinsettias. A Graham & Son report a very good business; they had a large run on red immortelle and boxwood wreaths. Gasser Company are gratified with the results of the Christmas business. C. M. Wagner expresses himself as well satisfied with trade conditions at his new store.

All are confident they will have a prosperous new year. O. G.

MILWAUKEE.—Christmas business averaged up about the same as last year. There was plenty of stock, with the exception of red, to meet all demands. Prices did not soar as high as formerly and the figures obtained were somewhat below last year's; but this may be due to the financial stringency. Retailers state they could not get the high prices even for high grade stock, but with the large variety and abundance of material the sales were heavy and receipts were above expectations. White stock went slowly, but it helped to fill in and much of it was used up in miscellaneous orders. Violets were none, but the prices were below the average for Christmas.

Plants of every description sold well and dealers were well supplied. Poinsettias were cleaned up early; these are more popular than ever. Holly was very scarce and none was obtainable the last few days. Other greens were in plenty. No complaints are heard, so it must have been a satisfactory Christmas all around. C.

DETROIT.—There never was such a variety of opinions as this season in regard to Christmas trade. From a large number of reports business was very good, while some say there was an increased number of sales, but of articles of less value than last year. Very good poinsettias, cut as well as in pots, sold well. Violets at \$4 per 100 were sold out late in the afternoon of the 24th. Carnations retailing at \$1.50 and \$2 per dozen were away behind the demand, while roses ranging from \$4 to \$20 per dozen for best American Beauty were just about in supply to go around.

Flowering plants and palms had a brisk call, and made-up baskets at from \$5 to \$20 also sold very readily. Prices all around were the same as last year, with a better demand for roses than one year ago.

Business since Christmas has been good, with a very limited supply of stock. F. D.

WASHINGTON, D. C.—No more favorable weather conditions could have existed than those prevailing during the holiday season in Washington this year. There was ample stock of good quality to meet all demands and though prices were about 25 per cent. lower than usual at this season, all stock was pretty well disposed of. In plants, baskets, etc. the chief demand was for small and medium grades; where \$15 and \$20 baskets sold readily a year ago, the demand this year was for those ranging from \$5 to \$15. Large azaleas proved undesirable, as a rule, but 500 plants of all descriptions sold readily. Among cut flowers carnations, violets, Richmond and American Beauty roses constituted the chief demand.

The season is averaging up very well, and promises to continue good on into the new year.

JAS. L. CARRERY

COVINGTON, KY.—R. D. Ruttle says: I can report my Christmas trade larger than last year's in spite of the scarcity of holly of which I was only able to get about one-third of my usual supply. Ferns and blooming plants sold better this year than last. Cut flowers held their own; not enough roses were to be had in the Cincinnati market for local trade, though the stock was good and fresh. Carnations were in fine condition and not pickled; I got all I needed. There were too many poinsettias, and few chrysanthemums; lilies were scarce; violets in fair supply.

One novelty we had was glass berry bowls—a live plant with red berries in a closed globe. This was much admired, but the price was too high. Small birch bark canoes filled with dyed green sea moss and red berries sold well. Paper bells were not in demand this year.

ST. PAUL, MINN.—While I have not seen all of the trade, still I think it is safe to say that everyone was well pleased with Christmas trade. The weather conditions were perfect, bringing out the shoppers and materially assisting in making deliveries. Stocks, as a rule, were of good quality and, except in red, equal to the demands. Plants, both foliage and flowering, sold well. Poinsettias, on account of their true Christmas color, were the best sellers both in the cut state and as plants. We did not hear of any made-up plants this year of poinsettias. Last year some were made up by cutting the short stem blooms, sticking them in pans of soil and disposing of them as plants. This is certainly bad practice.

Visitors: J. J. Karins, Philadelphia; C. W. Scott, Chicago; Charles Schwabe, New York. VERITAS.

BROCKTON, MASS.—Wm. W. Hathaway says: As to the Christmas trade this year, I can proudly say that it was on the right side of the ledger this season, as it ran a little ahead of last year's which, I think, is remarkable in view of the conditions of the money market and the short hours the shops are running. Plants sold nicely, azaleas, begonias, cyclamen and Whitman fern taking the lead, with prices about the same as those of last year. Cut flowers also sold well, carnations, roses, violets and Paper White narcissus being in the lead. Not enough carnations were available. Sweet peas and bulbous flowers generally held their own with last year's sales, and prices were about the same as then.

ASHLAND, VA.—J. Palmer Gordon reports his Christmas trade very good; carnations were in greatest demand among cut flowers, ferns leading in the plant line.

CHRISTMAS TRADE IN CANADA

TORONTO, ONT.—Business at Christmas was far better than in any previous year. Early last week trade started in lively and by Tuesday night both cut flowers and plants fit for sale were about cleaned up. Prices for fancy stock were perhaps not quite so high as in some previous seasons, but practically everything went. Flowers appeared to be plentiful, but on Tuesday afternoon some good orders from outside points were received, and then there was considerable hustling to get goods to fill them, and I heard of several that were not filled. The demand for flowering plants was very good, azaleas and poinsettias being the favorites. There was but little call for very cheap flowering plants, most of the retailers feeling that time was too valuable to handle them. There was a fine demand for holly and good holly wreaths, but the quality offered was generally poor. Mistletoe was first class and sold well. Moss wreathing was in over-supply, and at the last could be bought at any price. Some very fine European-grown holly trees were around; they were finely berried, but the price asked for them, and the fact that they cannot stand our winter, was against their being good sellers. The demand for made-up baskets of plants was brisk, and the same may be said of well-filled fern pans; there was also a good call for well-grown ferns, particularly of the Nephrolepis varieties. Clerodendron fallax, grown here for the first time, did not find favor, and very few berried plants were offered. A few small orange trees sold well, as did a few imported cicas. There were a few orchid blooms offered—Cattleya labiata, C. Triane, C. Percivaliana, Laelia anceps, L. albida, L. autumnalis, Cypripedium spectabile and Calanthe Veitchii. Several good vases of them were seen, and all sold. Since Christmas trade has been dull.

T. MANTON

OTTAWA. Christmas trade and weather were right up to the mark. Good sleighing and quite moderately cold weather made delivery of plants comparatively easy. The amount of stock was ahead of other years and with few exceptions was cleaned out. Scrim had a plant amon, the others, with large staves and conservatories attached to stores, did not need one. As everything sold it is difficult to pick out leaders, but perhaps azaleas, Boston ferns, Jerusalem cherries took the lead. It's wonderful how the Boston fern keeps ahead. From \$1 to \$1.50 was the popular price with the customers. The great number of plant baskets now filled take away from the sale of high-priced individual plants. There was a great rush for good solanums; Scrim had about 500 good ones, and they were all gone by Monday. Graham Brothers had a very fine lot of cyclamen which sold at from 75c. to \$2. Azaleas were a source of worry until the last. A big proportion were in, but some of the late shipments did not connect; \$1.50 was the popular price. If one plant could be said to go slower than others it was the polsetia.

The cut flower trade was very good, and the quality of stock from outside above the average. Carnations sold at from \$1 to \$3, the highest price being obtained for red. Roses were of fine quality; a large proportion had to be bought from outside, and the professional chat was, "What kind of Richmond did you get?" I took notice that the replies were "Grand from Boston, Chicago and Toronto." Not the old cry of poor, fair, passable, that we used to hear in the day of Meteor and Liberty. Prices were \$3 to \$4. Violets were good and sold well. Scrim and Graham Brothers had some fine W. H. Chadwick chrysanthemums, which came in very useful, as there was a big call for funeral flowers during holiday week.

So, although many had prophesied a poor Christmas owing to the financial disturbances, yet the trade was right up to the mark, and showed that in spite of the hard time cry the country is yet seemingly prosperous. E.

FREDERICTON, N. B.—Christmas trade far exceeded our expectations. We had predicted an exceptionally dull Christmas from our experience of the several weeks preceding, but our trade was equal to last year's, if not better. We had an exceptionally fine lot of cyclamen, poinsettias, azaleas, primroses and begonias, a few Gloire de Lorraine begonias, Pierson and Boston ferns. Holly all sold out. Several funerals, which called for designs, used up some pickled white flowers. The larger demand was, as usual, for carnations; next roses, violets and lily of the valley. Prices were better than usual, although stock in cut flowers was not quite so good. We were just able to supply the demand and thus pronounce the Christmas of 1907 as good as that of any of the preceding ones.

J. BEBBINGTON & SON.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business suffered a decided setback immediately after Christmas, and prices on all lines went down again. American Beauty roses, on account of their not being so plentiful, held to their values much better than did other varieties. The supplies of Richmond, Bride, Bridesmaid and Mme. Abel Chatenay seem ample for all demands.

Carnations are very plentiful and satisfactory clearances are impossible, even at the moderate prices ruling. Violets, like everything else, are not bringing the usual January prices. Sweet peas are coming in in increased quantities, and fetch about \$1 to \$1.50 per dozen bunches.

Yellow tulips and yellow trumpet narcissus have appeared and no doubt will be regular arrivals in the market from now on. Gardenias are quite plentiful and it is difficult to realize satisfactory returns upon the short-stemmed blooms. Lilies not being so abundant and good keeping stock as a rule, continue to bring fairly good prices. Lily of the valley does not clear out well and there is a plentiful supply all the time. Cattleyas were never before so numerous and prices are down.

Chrysanthemums are over; they have had a long season, if not a satisfactory one.

CHICAGO.—As usual the aftermath has knocked prices down to the level of pre-holiday figures. Though New Year's Day is a legal holiday in this as well as most of the states that this market supplies, there seems to be little advance demand and most assuredly there will be ample stock to fill all requirements.

W. K. W.

PHILADELPHIA.—For New Year's the cut flower business showed an improvement; stocks were plentiful, but moved more freely. American Beauty roses were going slowly on Monday, but by 5 p. m. on Tuesday the price was up to \$9 per dozen with flowers scarce. Tea roses were selling well; \$12 to \$15 per 100 was the average price for general stock. The Pennock-Meehan Company, who are handling the new rose Mrs. Jardine from Robert Scott & Son, obtained \$4 per dozen for all the choice blooms sent in.

Carnations are selling well; \$10 per 100 was obtained for some choice red; general stock went at from \$4 to \$6 per 100. Violets went at \$1 to \$1.50 per 100. Lily of the valley is still very plentiful, selling at \$3 to \$5 per 100. Gardenias are in good demand at \$4 to \$6 per dozen. Japanese lilies have sold very well at from \$1.50 to \$2 per dozen flowers. Paper White narcissus bring \$2 to \$4 per dozen. Bouvardia is now very good and is selling at \$3 to \$5 per 100. Cattleya are still plentiful at from \$50 to \$60 per 100. DAVID RUST.

CATALOGUES RECEIVED.

W. W. BARNARD COMPANY, Chicago.—Illustrated List of Flower and Vegetable Seeds for Early Sowing.

SAMSON & FILLON, Angers, France.—General Catalogue of Seeds, Bulbs, etc., printed in the French language.

SLUIS & GOOT, Enkhuizen, Holland.—General Price List of Vegetable, Flower and Agricultural Seeds, including Novelties.

WILLIAM BULL & SONS, Chelsea, London, Eng.—Illustrated Catalogue of Vegetable and Flower Seeds, Bulbs, Tubers, etc.

JOHN FEED & SON, West Norwood, London, S. E., Eng.—Catalogue of Vegetable and Flower Seeds, Plants, Roses, Fruit Trees, Supplies, etc., illustrated.

DAVID HERBERT & SON, Atco, N. J.—Descriptive Catalogue of Dahlias. A very complete collection containing lists of novelties in all classes. Handsomely illustrated.

CHARLES H. TOTTY, Madison, N. J.—Catalogue of Chrysanthemums, Roses, Carnations, Geraniums, including all the best Novelties and Standard Varieties. The Chrysanthemum has been Mr. Totty's specialty for years, and he furnishes a long list of these plants to select from. He says stock of some varieties is, as usual, limited, and advises early orders. The catalogue is illustrated.

VICK'S GARDEN AND FLORAL GUIDE (James Vick's Sons), Rochester, N. Y.—A well illustrated and comprehensive Catalogue of Vegetable and Flower Seeds, Plants, Bulbs, Supplies, etc. Asters form a specialty of this firm, and on the front cover design are beautifully portrayed, in color, the varieties Early Branching Aster Rose, a novelty, Violet King and Mikado. The Big Boston Lettuce, Swastika Pea, and Vick's Scarlet Globe Radish, in color, have been selected for the back cover. The catalogue, as usual, is embracing in all its departments.

EVERYTHING FOR THE GARDEN (Peter Henderson & Company, New York). This, the sixty-second consecutive annual catalogue of this well known house is the handsomest issued by the firm, which is saying a good deal. Its beautifully embossed cover designs, in white and gold, with representations of "The Garden Beautiful," and "The Lawn Beautiful," in colors, render it at once attractive. The offerings in the many departments are, as usual, most complete and interesting; and the numerous and varied illustrations enhance the book to a marked degree. Among the colored plates shown this year are those of Henderson's Ponderosa Tomato, Henderson's Invincible Asters, which were awarded a gold medal at the Jamestown Exposition, a charming plate of the new Rose Cardinal, and groups of Chrysanthemums and dahlias.

CHANGES IN BUSINESS.

WOONSOCKET, R. I.—Vose, the florist, has opened a new store in the American block.

VINCENNES, IND.—Albert Zepf will erect on North First street a greenhouse and engage in the florist business. He was formerly employed with W. A. Heiman and at Joliet, Ill.

JACKSONVILLE, FLA.—A new floral firm has been established here by Herbert L. Sawyer and James H. Payne under the style of Sawyer & Payne, at 27 West Bay street. Mr. Sawyer for the past two years has been the manager for C. D. Mills, florist. James H. Payne is a popular stock broker, whose offices are in the Baldwin block.

New Violet Boston

IN introducing this new variety to the public I wish to state that I have been growing it in quantity for the past two years and do not hesitate to say that it is *entirely distinct*, a *strong grower*, a *free bloomer* and the *finest single violet in cultivation*.

Ready for distribution in April and May. Orders booked now.

\$12.00 per 100. \$100 per 1,000

THE WEEK'S WORK Timme's Timely Teachings.

Starting Anew.

Propagation to the fullest extent from now on and for months to come will hold the grower's interest and claim his undivided attention. Very much of what makes his prosperous line of business depends on the exercise of sound judgment in providing stock for the future. Deliberate forethought should govern his efforts in this direction and clearly defined purpose must point the way. Without this the greatest success in the rooting of cuttings, the starting of bulbs and the raising of seedlings may possibly turn out to be only so much more added to the burdens to be lugged through a wearisome path of profitless endeavor. Every one who is engaged in the production of plants and flowers for profit should from his own individual viewpoint and for the future welfare of his own particular business first find the right answer to the pertinent question of what to grow for the coming season's trade before he goes headlong into propagating anything and everything that bids fair to develop into full-sized plants.

This admonition is by no means a needless one, although it may appear so to the cautious, thoughtful grower at the head of a flourishing and wisely conducted establishment. Aimless mass-propagation of florists' stock is practiced to so great an extent that a word of warning in good season should not be looked upon as being superfluous or out of place. It is safe to say that thousands of plants, acres of indoor and outdoor flowering crops are raised every year that never yield a cent of clear profit; not referring at all to the vast quantities of stock perishing in consequence of unavoidable neglect or improper treatment.

The mere fact of having right and left throughout our houses an abundance of the finest, sturdiest material for propagation very often furnishes the only reason for putting into the sand thousands of quickly rooting cuttings of kinds that for years past are known never to have done any more than just bring back a new dollar for every old one expended in their culture, with a trailing of others which fall short of even that much in point of evening value. The propagation of still other kinds of stock, good though they are, knows no limitation, is continued as long as cuttings can be had, in spite of being already over-multiplied. The temptation to the sanest of propagators to avail himself

of what he has in such abundance and perfect condition right at home instead of risking cold cash for untried new stock, alleged to be better, or to put a halt to working up supplies of such of which he has already more than enough, is great and hard to resist, as everybody will admit. Then there is the hope, always uppermost in the mind of a good grower, that perhaps by giving this or that variety another good trial he might improve on it, make a profitable thing out of one barely worth raising so far. And another season's vain attempt will oftentimes not shake his conviction that good culture and change in methods are all that is required in overcoming its defects the next season.

Such persistent effort is laudable, sometimes highly fruitful in its final results, but not often, and at all times involving an amount of expense out of all proportion to the real returns. Cases of this kind assume an extremely grave appearance when it is known that one or several varieties, better in every respect than the one would ever be likely to be after years of painstaking effort, already existed and could easily be obtained right at the beginning at reasonable cost. While it would, indeed, be an unwise proceeding to discard any fairly well-paying variety or kind of stock for one possibly just as good and probably better, it is certainly folly to keep in stock any longer anything plainly not finding favor with buyers or proving doubtless unprofitable to the grower, when better things in his line of trade are begging at his door to be let in. There is not even need in every such instance to go into something entirely new, untried or high-priced, if there is anything of unquestioned merit commercially on the place deserving of more space and more extensive propagation to take up all the room vacated by discarded stock.

An immense number of stock plants are housed every Fall, which for want of light and room in starting furnish poor cuttings, and these after being rooted and potted up are suffered, for the same combination of reasons, to grow into stock of decidedly low grade, most of it destined to enlarge the dump pile. But that is not all. Some very antiquated varieties of cannas, fuchsias, geraniums, dahlias, chrysanthemums, salvias, etc., hard to dispose of even if ever so well grown, and long since displaced by others that sell at sight, are still grown extensively, undergoing mass-multiplication year after year, and all because it is there and believed to cost nothing.

The very best of florists and plants-

CHRYSANTHEMUM STOCK PLANTS

PAUL MADER, East Stroudsburg, Pa.

men are not immune from falling into errors when stocking up anew and not exempt from penalty due to faulty judgment in seizing future possibilities and trend of trade, but they very seldom make the mistake of under-estimating the price of time and labor and the earning value of available garden, field and glasshouse space, and always find sufficient spare time to consider fully their future course of action before entering upon it.

GARDENIA PLANTS SCOTTII FERNS

AND A GENERAL LINE OF

Decorative Stock

JOHN SCOTT

Ruiland Rd. and E. 45th St., Brooklyn, N. Y.

Rooted cuttings of all soft-wooded plants are in demand at this time by florists who do not propagate their own stock. Growers making a specialty of the rooted cutting business will find an advertisement placed in *THE FLORISTS' EXCHANGE* a very profitable investment.

New Carnation DEFIANCE

Mr. W. N. Rudd, Morgan Park, Ill.

Dear Sir: I wish to congratulate you on your splendid red carnation Defiance. I have for three seasons been using part of the cut at my two retail stores and it has made for me customers and money. Its keeping qualities are wonderful, its color pleasing and its form and fragrance are in keeping with its other good merits; its only drawback being the inability to secure enough blooms, as the local retailers all seem to want this particular variety.

Yours truly, GEORGE ASMUS.

\$12.00 per 100, \$100.00 per 1000.

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.)

We can supply them at \$2.50 per 1000, or \$50 for \$1.50, and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet.

Try a thousand and see what a help they are in selling goods.

A. T. DE LA MARE PTG. & PUB. CO., Ltd.

P. O. Box 1697 - NEW YORK

Introducers and growers of carnations who supply the trade with rooted cuttings will find this a very favorable time for placing an advertisement in THE FLORISTS' EXCHANGE.

VICTORIA

NEW SEEDLING, crossed by Lawson and Harry Fenn, the color of Lawson and the long stem of Harry Fenn; it is more prolific than either. Lawson is past. Victoria is better than Lawson ever was, and gave us last Winter from 20 to 95 per cent. more blooms each month. It is very healthy and a nice grower. I have two houses of it, and it is a sight to see the buds and blooms. It brings more money in the market than Lawson. Read below what J. A. Budlong & Sons Company of Auburn, R. I., say of it. They are growing it this Winter. J. A. Budlong & Sons Company are one of the largest market gardeners in New England, also the largest rose and carnation growers in Rhode Island.

December 10, 1907. Mr. J. H. Cushing, Quindnick, R. I. Dear Sir: We have 1175 plants of your new seedling Victoria carnation which we planted in house the last of July. They

	WHITE	100	1000
Queen	\$1.50	\$12.50	
Perfection	3.00	25.00

Winsor	5.00		
Aristocrat	5.00		
Enchantress	2.00	15.00	
Rose Enchantress	3.00	25.00	

QUIDNICK GREENHOUSES

have made fine plants and we think now will produce as many flowers, if not more, than any carnation we ever grew. The stems are stiff and good length. The flower is also a good keeper.

We have sold these flowers in several instances to some of our best trade in Boston, who thought they were a long-stemmed Lawson.

Up to date, we have cut 4768 flowers from the 1175 plants, and there are as many buds in sight to-day as there have been any time since we started to cut. In other words, the cut has been very uniform and looks as if it would continue so throughout the Winter.

We do not think that you will make any mistake by putting this carnation on the market. Yours truly,

THE J. A. BUDLONG & SONS CO.

Price of Victoria rooted cuttings, \$75.00 per 1000; \$8.00 per 100; 25¢ at 1000 rate

HERE IS A GREENHOUSE TRUISM

"To earn more, learn more." Perhaps this applies particularly to you, perhaps it doesn't, but most of you growers are ready to take in every extra dollar that can be turned over. The man who is drudging along with old-timey houses is to-day up against a pretty stiff proposition to make ends meet. Still there are lots of just such men who this very minute are considering putting up this Spring a wooden house with heavy wood plate. They lose sight of everything but price for the time being, and buy another three-minute house and expect to win out in a 2.08 race. The men who have learned their lesson about wood houses and wood plates, and are always ready to learn a new one, are buying our Iron Frame Houses; they are willing to spend more money to make more money—a thing every would-be-successful-florist must do. Write us.

How About It?

Are you going to put off the subject of building until next summer again? Why not talk it all over now and get the whole business all in good shape so that next spring when the first warm day shows up you can get right out and put up your greenhouse? No waiting, no worry, no loss of time and money. Mr. Florist, it is a common sense proposition—figure and order now, and build when you want to. We have time to give you careful, close attention now. You want the catalog first, so send for it today. Don't lock the door tonight unless you have written for it.

Sash opening apparatus and all kinds of greenhouse structural material

Your Money is well spent when you advertise in **THE FLORISTS' EXCHANGE**

THE "TOWER OF STRENGTH"

We are bound that you shall know exactly what we mean by our Semi-Iron House, and why the estimates we send you are apparently somewhat higher than the prices of other houses that you choose to compare them with.

Let us understand each other at the very start. Many of these estimates which you hold up to us are for **WOODEN HOUSES** with wooden eave plate, wooden purlins, wooden posts, simply the old-fashioned sash bar house. We stopped advocating that kind of a house years ago, just because the florist did not and cannot get the worth of his money out of them. Look at the illustration. That is the skeleton iron work of our Semi-Iron House. It shows the Giant Arch and purlin supports made with our Split Clamp Column Fittings; the Ice-Clearing Eave Plate; Iron Posts; Adjustable Column Foot Pieces. Now put the cypress in place and you see what an enduring rigid construction you get.

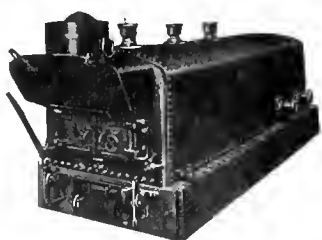

The point is this: You can't compare a wooden house estimate with one for our enduring Semi-Iron Houses, because they are not in the same class. Send for our circular which shows you the details. Lord & Burnham Co., New York Offices, 1133 Broadway, Corner 26th St. Boston Branch, 819 Tremont Bldg. Philadelphia Branch, 1235 Filbert St.

VOL. XXV. NO. 2 NEW YORK AND CHICAGO, JANUARY 11, 1908 One Dollar Per Year

Winsor and White Enchantress

Strong Rooted Cuttings
 Now Ready for Delivery

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere, and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. Order early, while we can promise immediate delivery, and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6.00 per 100, \$50.00 per 1,000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60.00 per 1,000. Strong established pot-grown plants, \$9.00 per 100, \$75.00 per 1,000.

Mushroom Spawm

the best Mushroom Spawm in the market, is sold by all leading seedsmen.

A fresh sample brick, enough for a small trial bed, together with large illustrated book on "MUSHROOM CULTURE," will be mailed postpaid on receipt of 40c. in postage stamps. Address American Spawm Company, St. Paul, Minn.

"Quality is remembered long after price is forgotten." What Quality Means.

Quality means the best and finest types procurable in their respective classes. We go to specialists for our flower seeds. Our customers, the florist, the private gardeners demand the highest grade. We have no cheap catalogue trade. "Quality" may mean a little higher in price. "Quality" in fact, means "Quality" and we know that when you buy from us you get it, and our customers know it, too. Catalogues now in press; 40 pages. Write for one; it's free. We sell bulbs too.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION

George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

"The Culture and Uses of Bromegrass," is the title of bulletin 111 of the Bureau of Plant Industry, just distributed by the Department of Agriculture, Washington, D. C.

IOWA SEED COMPANY IS OPTIMISTIC.

—Writing on November 27, 1907, to Agricultural Advertising, the Iowa Seed Company, Des Moines, says:

"Most assuredly we are optimistic. Why shouldn't we be? Our trade is as good as we can expect for this time of the year. Our mail and local sales during October of this year were 16 per cent more than sales during the same month of last season. Our mail and local sales for November up to this date are 23 per cent more than during the same time last year. It is true that the wholesale trade is not up to that of the previous year, but this is doubtless owing to the financial condition. Our experience is that no one is scared except the bankers and the speculators. Business men doing a legitimate trade have had a favorable season. The farmers are the most prosperous that they have ever been and we believe that they will spend fully as much money during the coming season as usual."

[We should be pleased to be favored with the views of other seed houses for publication.]

IMPORTS OF SEEDS, ETC.—January 1.

JAMES VICK'S SONS ROCHESTER, N. Y.

The Leading Specialists and Largest Growers of High-Grade Asters in the World.

Two New Varieties for 1908

VICK'S IMPERIAL SUNRISE

A novelty of extraordinary merit. Seedling from Vick's Daybreak, but distinct in form of flower, each petal being perfectly quilled. Color, delicate pink. Plant a robust grower, upright branches, each crowned with magnificent double flowers, three to five inches in diameter. Type securely fixed. Sure to be a winner. Packet 25c; two packets or more 20c, each.

VICK'S EARLY BRANCHING

Developed from Vick's Late Branching. Flowers of this new variety can be placed on the market ten days ahead of Late Branching sorts. Plants have few branches which are free from side buds, the whole strength of the plant being given to the development of large perfectly double flowers. Long stems. Two colors, White and Rose. Packet 25c; two packets or more 20c, each.

For prices in quantity see our "Aster Book for Florists."

OTHER FAVORITE VARIETIES

Hohenzollern Early	Hohenzollern Late
White Fleece	Early Wonder
Empress Frederick	Giant Comet
Sempie's Branching Pink	Queen of the Market

For prices see our "Aster Book for Florists."

Seed Trade Notes.

Every branch of the seed business is rapidly assuming a strong activity, which will in fewer days than many of us realize, push us, ready or not, into the rush of the selling season of 1908. As I said some weeks ago, the seed catalogues, especially of the larger houses, are coming out and being distributed into the hands of the customers much earlier than ever before. In fact, Burpee's and Henderson's superb catalogues have been out almost a month, and Thorburn's some two weeks; and all the others will now follow rapidly day by day. I will here take just a line to speak of the real elegance of the three standard American seed catalogues now mentioned. Every reader of 'The Florists' Exchange' can very profitably spend not minutes but hours in absorbing all that is grandly good in each of these magnificent seed books. The conservative conscientiousness of the Thorburn catalogue must be studied, and earnestly, to be fully appreciated; the gorgeous splendor of the Henderson book is most impressively grand; and by no means last is the Burpee personality, as stamped on one of the most elegant seed publications of the year. One can afford to study all three of these catalogues, and thereby imbibe the right doing of the seed business that is in them.

Appropos of doing our seed businesses rightly, I was very much interested and most agreeably impressed, when in Boston this week, by the extensive and thorough preparations for conducting a seed business that the Haskell Implement & Seed Company is making at 21 and 22 South Market street, in that city. This firm is not new to the trade, as it has for a great many years been conducting an extensive seed and kindred line at Lewiston, Me. In Boston, this firm has been able to secure, many will say, perhaps the best location in the whole seed section, for its new venture. A whole building will be occupied, with the retail salesroom on the street floor, where the modern and elegant plate glass windows will attract surely a good volume of Boston's ever-increasing transient counter cash business. I wish this new firm in the Boston trade every success; if it puts out only the very highest grade of seeds it will in time obtain its full share of the Boston business—and not otherwise.

The very mild weather for the season that has and still so agreeably and persistently continues, seems to have given the Holland bulb trade a new lease of life. All bulbs that do well in the window garden have during the past month or more been in very active request; in fact, hyacinths and those bulbs especially that can be grown in water, have sold very nearly as well for this purpose, some houses claim much better, than at any time during the regular bulb season. The bargain bulb hunters are still with us, but they find little to repay them for the time taken in hunting bulb surpluses; for, in fact, there are now no real surpluses in any direction. It has most certainly been a very satisfactory season for all handlers of Dutch, French and Japanese bulbs.

Some weeks ago I stated that almost all the Japanese bulbs were so late in being received in this country this past Autumn that very few shipments of them could be made until Spring again; but so comparatively mild and steady has been the prevailing temperature that many lots of Japanese bulbs and roots are being delivered every day which will relieve the always over-rushed active Spring business just so much. Of course, the most careful packing to keep the bulbs from freezing in transit has been necessary; but even the labor of this is preferable by far to adding all these orders to the unable to handle rush of the coming four months.

As regards the disclaimer of crop responsibility, as printed on seedsmen's packets and bags, and approved by the American Seed Trade Association, it is certainly a cause for satisfaction among the entire seed trade that the recent Baltimore seed house case was decided by a jury in favor of the seedsmen. But the other side to this matter is this: The seed trade as a whole should see to it that no irresponsible seller of seeds takes advantage of this protection and under cover of it distributes seeds of doubtful quality. The seed planter has just as much right to be protected as the seedsmen.

Among the ranks of our trade there have been an unusually large number of

deaths lately; but out of them all not one approaches in sadness and sorrow, the untimely death by fire of John Clark, his wife, and his three children. Mr. Clark at the time of his death was with the H. E. Fiske Seed Company, Boston, Mass. All have read the full reports of this tragedy; I wish to take just a line to speak of John Clark as I knew him in his daily life. The deceased was absolutely square and honest in all his dealings, a thorough seedsmen, and a true friend to all who knew him, no matter how slightly, and such were legion. I have nothing but good to say of my dear old friend, John Clark, and I know that the seed trade as a whole, who knew him, will grieve sincerely for his untimely death.

Another very sudden death that came last week as a great blow to the seed trade was that of Everett B. Clark, Milford, Conn. In all America no seedsmen was ever held in higher esteem than the deceased. For many decades Mr. Clark had been recognized as the highest authority on sweet corn in this country; and as president of the trusted seed growing corporation that bears his name was universally respected by all whose good fortune it was to have known him. Mr. Clark's death has come upon us so very suddenly that as yet we realize little the great loss the American Seed Trade has thereby sustained. But let us profit if we can by the splendid qualities for good that made him so well beloved by all. It makes me sad, indeed, to feel that Mr. Clark will no longer be with us; we can ill afford to lose such men.

European Notes.

The music of the Christmas bells has brought us a full week of fine dry weather, bracing both to body and mind and especially helpful to our belated seed crops. If it only lasts for one more week, the harvest of 1907 will be completed before New Year's Day and our shipments may yet arrive in good season.

Unfortunately some serious accidents have befallen some of the Atlantic cargo steamers, which cause not only loss but vexatious delays. The losses are all the more serious because many articles cannot be replaced.

The slump in the value of European onion seed continues and such varieties as White Spanish (jamne paille) are freely offered at 50 per cent. below the early November prices. The German varieties are dropping in value daily, but Italian Silver White earliest strains are advancing, owing to some heavy orders from your side. The red fleshed varieties are firm all round.

The European markets are being flooded with offers of heavy surpluses of nasturtiums from the lowland districts, but the germination is weak and will soon perish. Some firms report a great falling off in the demand from your side. There may be some truth in this, but it is not the principal cause of the heavy losses which some speculating growers of this article will sustain this season. Some greedy lunatic hears that a grower has made 25 per cent. profit on 100 pounds of seed and he forthwith grows 10,000 pounds, hoping for the same results. And then—"there comes a frost."

EUROPEAN SEEDS.

EUROPEAN CLOVER AND GRASS SEEDS.—R. Liefmann Sons, Hamburg, Germany, through their agent, J. L. Radvanyer, New York, report that the crops of red clover have now been estimated, but that the quantity in Europe does not approximate that of last year. The crop of Great Britain is a total failure, and that country will have to import its supplies—estimated at from 6,000 to 7,000 tons. The arrivals from Chili amount to about one-half of last year's. Austria-Hungary has harvested on the average less than a medium crop, a large part of which has already been consumed, principally by England and Germany. The crop in Germany has also been over-estimated; only a quarter of an average crop in that country can be calculated upon. Belgium and Holland will have to import, the crop results in both countries being rather unsatisfactory. It is expected that France will have to import seeds later on. Italy has a small medium crop. As regards the Russian supply, Central Russia has nothing to spare; the North has been compelled to buy from the South, which latter district can only dispose of seed for the export trade

and the supply of domestic wants. America and Canada have bought considerably less than last year; the demand is not now as brisk as it was at the beginning of the season, possibly owing to the precarious state of the money market. The prices have declined from about one-quarter to one-half a cent.

As regards alfalfa, a large part of the crop has been spoiled by rain, which set in just before harvest time. Prices have advanced considerably. Turkestan has also yielded a much worse result than last year, with a consequent advance in prices. Alsike has also suffered by the rain, much of the seed having a bad appearance. Germany will, therefore, have to import to a much larger extent from America and Canada. The European supply of timothy is apparently smaller than last year, and qualities in many cases are dark, only a few being silvery-colored. Large quantities were purchased from America recently. The firm's crop of cocksfoot is small, the Australian crop being also limited; prices, therefore, have advanced rapidly. There is a feeble business as yet in red-top grass, but it may become brisker

later on. Tall meadow oat grass is a small crop, and prices are the cheapest in proportion to those of other grass seeds. Of Bromus inermis there is an average crop, but the quality is inferior to that of last year.

The Bolgiano Seed Case.

J. Bolgiano & Son, seedsmen, Baltimore, Md., have favored us with copies of the ruling of Hon. Judge Harlan in the recent Chinese giant pepper seed case decided in favor of the firm named; and also of the prayers of the defendants and plaintiffs. These various documents are published herewith, as we feel sure they will be of great interest to the American seed trade generally.

Opinion as to the Admissibility of Proof on Question of Usage and Custom.

BY THE COURT: Gentlemen, I feel very much indebted to Counsel for the manner in which the case has been presented. I have not had the opportunity to make an examination of all the cases that have been cited, but I have tried, as well as I could, to follow the decisions as they have been read, and after having examined with a good deal of care some of the cases that have been cited, and, I believe, the whole run of the Maryland cases with reference to the admissibility of Usage and Custom, I feel I ought, without further delay, and in order to go on with the case, to decide now the question that has been raised, and that question is as to the Admissibility of Usage and Custom in this case, under any aspect of the case or for any purpose.

As I understand it, the offer of proof is made generally and if the evidence is admissible for any purpose in the case it would not be proper at this time for the Court to exclude it, whatever it might be proper for the Court to do hereafter in the way of limiting the effect of the evidence when it becomes necessary to give instructions to the jury.

It, according to the contention of the plaintiffs, the contract between these parties was absolutely closed as to all its terms and conditions by the letter of July 11 and if thereby there was made a contract by which the defendants agreed to ship to the plaintiffs by mail a pound and a half of Chinese Giant pepper seed, and if, as a necessary result of that contract, when the Chinese Giant pepper seed agreed upon was not shipped, the defendants would be responsible to the plaintiffs for the difference between the value of the crop, which might probably have been produced had Chinese Giant pepper seed been sent and the crop which was produced by the seed that was shipped, I would say that this evidence was not admissible. But, in my judgment, that letter does not close the contract, and is not an acceptance of the offer made by the plaintiffs to the defendants; on the contrary, the letter of July 11 from the plaintiffs was itself the offer to take a pound and a half of Chinese Giant pepper seed, and no contract was made until that offer was accepted by the defendants.

It, therefore, becomes necessary for the Court to consider what else there was as to an acceptance, and what bearing this evidence now offered, if introduced into the case, might have upon that question. I take it, to paraphrase the letter into an offer, that if the plaintiffs had written to the defendants, "we offer you two dollars and a half and the postage for a pound and a half of Chinese Giant pepper seed, to be sent to us by mail," and the defendants had written back, "we accept your offer and mail you the seed, but we cannot warrant that these seed will produce Chinese Giant peppers, or that they will fructify and produce a good crop, and if you are not willing to use the seed with that understanding you can return them, and we will return you your money," and the plaintiffs on receiving a letter of that kind had used the seed, that then although they might claim under the doctrine that there was an implied condition that the seed supplied would answer the description of the seed asked for, and that under that doctrine there was a breach of the contract, the rules of law would not allow them to recover anything more than the ordinary damages which are allowed upon the failure to deliver a thing which has been ordered, which is ordinarily the difference between the market value of the thing asked for and the market value of the thing which was supplied.

When the case of the plaintiffs was first presented and the defendants asked me to say there had been a fatal variance between the contract declared on, and the contract proven, they virtually said the acceptance was by the sending of a package marked "Chinese Giant pepper seed," and containing upon the bag or package the substance of the language which, as I have said, if put in a letter, I thought would bind the plaintiffs. I refused to so rule, and did so for this reason: of course, contracts are made by the meeting of the minds

of the parties; they must both agree to the same thing. But we gather the meaning of people from what they say, and from what they do. And if the thing which a man says, or does, ordinarily means a certain thing, that is the meaning which the law attaches to it, or the meaning, at least, which the jury is authorized to attach to it. And when the case stood only upon the facts that the parties had been dealing by letters, and that when the letter of July 11 was received there was no reply by a letter, and the defendants changed the method of communication and sent a package and put on the back of the package the alleged disclaimer in language so small that it was almost analogous to the case of the Roman Emperor who wrote his laws so fine, and put them up so high the people could not read them, there being no evidence that the defendants knew anything about such a use of the alleged disclaimer, it did not seem to me that the Court could say as matter of law that that language or that disclaimer became a necessary part of the contract, or that the plaintiffs in the case were bound to take notice of it.

But the offer of proof now is to show, according to my understanding of it, that there is a general custom among seedsmen to mark their packages in that way, that the same disclaimer appears in the catalogues of all seedsmen, and that a copy of the defendants' catalogue containing that disclaimer was sent to the plaintiffs, and not only was that the case, but at the same time the package

of seed was sent, a bill of parcels or a receipt was sent which contained upon it the same disclaimer. And it does seem to me that evidence of that kind might put an entirely different aspect upon the case. It bears upon whether the defendants' method of acceptance was ordinary or usual in the trade, and again while not equivalent to actual knowledge, it does seem to me it is admissible to go to the jury, for them to determine if the plaintiffs know of that custom, and whether when they received the seed, or when their agent received it and saw or could have seen what was on the back of the envelope or package containing the seed, it became his duty to read it.

Now, gentlemen, I have said this so the Court might appear to be no inconsistency between the Court's ruling before, and the Court's ruling now.

I think the evidence offered is admissible, but in order that I may reserve all questions, if it does not amount up to what I think it ought to be, I will admit it subject to exception. The objection, however, at this time is overruled.

Plaintiffs' 13th Prayer.

If you believe from the pleadings and the evidence in this case that the plaintiffs were trading in July, 1904, as T. A. Winfield, and wrote to the defendants the letter of July 4, 1904, and that in reply thereto the defendants wrote to the plaintiffs the letter of July 6, 1904, and that the plaintiffs received the said letter of July 6, 1904, and through T. A. Winfield, wrote the defendants the letter

of July 11, 1904, and enclosed the defendants in said letter of July 11, 1904, a check for \$10.25 and that the said defendants received the said letter and check at the same time, and deposited the said check in their bank account on the day of its receipt, in case you find it was received, and that they received the money on the said check in payment for the said seed, and that the alleged usage of which evidence was offered was not known to the plaintiffs and was not so uniform, well known and well established that the plaintiffs should be presumed to have known it, and that neither the plaintiffs nor their foreman, George B. Reed, in case you find he was their foreman, either read or was informed of the nature or terms of said disclaimer, either on the receipt mailed to the plaintiffs, if you find the mailing and receipt thereof, on the bag in which the quantity of seed was sent by the defendants to the plaintiffs, in case you find a quantity of seed was so sent in a bag by the defendants to the plaintiffs, and that the said bag there was stamped, printed or appearing thereon the said disclaimer mentioned in this case, and that the said disclaimer was not so distinctly called to the attention of the plaintiffs or their foreman by the defendants as to have made it the duty of a man of ordinary prudence and caution, under the circumstances which surrounded the plaintiffs or their foreman at the time, to read the said disclaimer before planting the said seed (in case you find the said seed was

ROSES

Propagating.

About the middle of this month or the first week or two in February, enough cuttings should be made to provide sufficient good stock for benching next June or early July. On the larger establishments, or where a plant business is carried on, thousands of cuttings are already made, and in some instances are ready to pot off; but for the majority of growers the middle of this month is early enough to start operations. Where any large number of plants are to be raised a regular house for propagating should be provided. This is the best and most economical in the end, but where this cannot be had, select a part of a bench where a goodly amount of bottom heat can be provided. Clean out the old soil and wash out clean, then apply a coating of hot lime. Some coarse cinders can then be put in the bench; on top of these about four or five inches of screened sand. This, as has been suggested before, should be clean and sharp; pack it down well with a brick, the firmer the better; then level off again, so that it is nice and even.

To strike a batch of rose cuttings well is an easy matter if the work is done with any amount of care at all; the principal thing is to keep the temperature even, say 62 to 64 degrees in the sand and, if possible, 10 degrees cooler on top. This, of course, cannot be done, unless a propagating house is used. American Beauty is perhaps the only rose that is difficult to root; this variety requires very careful handling. The wood of which the cuttings are made should be as near as possible of the same degree of hardness, thus insuring an even strike. It should never be permitted to wilt, and the cuttings must be made with a sharp knife. For this rose two-eye cuttings are the best. The lower cut should be just below the eye, the upper one above. Two leaves left on each cutting is sufficient; if more foliage is allowed to remain, the cuttings will not dry off as well after each watering. It should be borne in mind that each cutting is an embryo plant, and one cannot expect a good plant from a weak cutting, or one taken from a dis-

Grafted Roses

\$12.00 per 100; \$100 per 1000.

If you can furnish the scions, we can quote you lower prices in any quantity you wish.

Everything goes

to prove that our own root, summer grown, winter rested **ROSES** are the best for florist and nurseryman. 400 leading sorts.

eased plant. Therefore, look out for the quality of the wood used for this purpose, and let it be only from thrifty stock. Do not crowd the cuttings in the bench too much; they should have at least 1 1/2 inches between the rows and 3/4 inch in the row. After putting the cuttings in the sand, give a fair watering, using but little force, after which, if the sand and drainage are right, a light watering every morning will be required, unless the weather is warm and little bottom heat can be used; but on no account should the sand be permitted to get dry, for this would mean death to the cuttings. The foliage would get hard and dry, turn yellow and drop off, and a cutting without foliage, no matter how well rooted, will seldom make a satisfactory plant. Allow no draughts or sun to strike the cuttings at any time until roots appear, which in the case of American Beauty will be in about four to five weeks, Richmond three weeks or sometimes less, while the cuttings of nearly all other varieties will take a few days more. Richmond is the easiest and quickest to root.

The soil that will be used for potting should now be in a warm place, where it can be got at when required. It will not do to take cuttings from the warm sand and pot them in soil just above the freezing point.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSEYRMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

FRANKLIN, MASS.—The Continental Nurseries have purchased an additional 10 acre plot which will be devoted entirely to the growing of trees and evergreens, while the 28 acres contained in the home grounds will be reserved for the growing of shrubbery and hardy plants only. Plans have been completed for fitting up the interior of the large barn into an up-to-date packing shed with storage cellar underneath.

Japanese Walnut, *Juglans Sieboldiana*.

The writer has referred before to the *Juglans Sieboldiana* as producing a nut of no merit whatever. If the tree has any value at all except as an ordinary ornamental tree, it has not been claimed for it; it may be valuable for its wood, just as the black walnut is. The name Japanese walnut leads many to wish to grow the tree, thinking to get something different and better than any of the older kinds. It is different, but not better—not so good, in fact, as the well-known black walnut or the English. The fruit of *Juglans Sieboldiana* has all the appearance of a hybrid nut such as the English walnut sometimes gives rise to. In appearance there is more resemblance to the English than the black walnut. On cracking the nut the thick shell is just like that of the black and what "meat" it contains is of the same quality, or not so good, if there is a difference. The nut is smaller than the black walnut, and is in every way inferior to it. This being so, there is no use in anyone growing it for its nuts.

The English walnut, *Juglans regia*, heads the list of desirable walnuts. The large thin shelled are hard to be improved on, and as improved ones need grafting to increase them ordinary buyers take seedlings raised from large fruited sorts.

Walnuts do not always fruit satisfactorily and it is sometimes because of lack of lime in the soil, as this tree delights in soil of a carbonaceous nature. Where an absence of lime is suspected, fork in a good dressing of it early in Spring over the surface where the roots extend, and look for good results to follow.

Preserving Hollow Trees.

Florists are often asked advice by those who visit their establishments on the preservation of hollow trees. There are not only trees on their own grounds but also in public places which they take an interest in preserving. The use of cement for the purpose of filling up hollow spaces is coming to be understood. Trees are not always hollow from some outside hurt. Some become hollow that have no outside scar at all, and then it is not possible to tell easily that they are hollow. Were it otherwise it would be a good thing to doctor them for their good. Cementing the hollows until the cavities are filled up solid is the way to do it. First all decayed substances are to be scraped out, to intercept any spreading of fungus. Then the cement is filled in. Some trees that are blown down because of their hollowness could have been saved had they been cemented. The writer a few weeks ago saw a fine specimen of wild cherry, *Cerasus serotina*, blown down in a gale because of its hollow trunk. This would not have occurred had a body of cement been in its heart, for that would have been a prop that would have prevented the trunk from severing and splitting.

Cementing should be done when the weather is not freezing. The portion of the cement visible after the completion of the work may be painted the same color as the bark of the tree.

Layering Hollies.

In a private letter from a florist in North Carolina he mentions his success in propagating hollies by layering them. The plan is to cut down a strong holly to within a foot or so of the ground, in order that shoots may break forth below that for the purpose of layering them without trouble. As soon as the shoots are of proper length they are cut below a joint in an upward direction, a small stick or stone inserted to keep the cut open, and then sand is heaped around the plant, covering the

shoots all but their top. This work is done in Spring, and by Fall the layers will have made some roots, but hardly sufficient to maintain them as individual plants after they are cut off, so to be safe it is much the best way to leave them undisturbed until two Summers have passed.

This layering plan would be worth following with a fertile plant. It is well known some hollies are fertile and some not, and of the latter class seedlings can be relied on to give what may be wanted. A true fertile holly has to be increased by budding, grafting or layering. To be certain it is a fertile plant the flowers must be carefully examined as well as the noting of its bearing berries, unless the plant is entirely isolated from all others and is bearing berries, in which case its being a fertile one is to be assumed.

It would be an easy matter to sell hollies could nurserymen guarantee them to be berry-bearing, indeed as it is, a holly can always be sold by those who keep them, for there are rarely but few to be had in nurseries.

Growing the Fig Outdoors.

Considering that figs can be grown very well in our Northern gardens it is a surprise that they are

not more common. The writer has seen a few in Western Virginia, but the most common are those planted after the manner described in the article on figs and fruit at once bearing a plentiful crop every year.

The writer has two or three well built figs. They he digs up completely, takes them to a corner of his garden, and turns them under a board, sometimes with leaves, at other times with just soil, or covers. A slight covering is enough, as it does not hurt them if they freeze when covered up.

The fig will stand more cold than imagined. One Winter a plant that had but two long shoots to it had the shoots placed prostrate with the ground and a plank put over them, kept down by placing heavy stones on it. When Spring came the board it seemed had been ample protection; the shoots were uninjured. The moist ground with the shade the board afforded had been sufficient, and in sheltered places here figs have been known to live out unharmed in mild Winters.

Pinus koraiensis.

Pinus koraiensis, a Japanese pine, is a remarkably beautiful species, and one which considering its great merits is far too seldom met with in collections. There

is a beauty of outline in its growth, and its foliage is of such a pleasing character that it is entitled to first rank among ornamental pines. Allowed to grow naturally, it forms a tree of broad, pyramidal outline, such as the photograph shows. Its needles are soft, an advantage over those of a rigid character, and they are closely arranged on the short jointed shoots. But the chief beauty of the leaves, and a prominent feature, is the color of the needles. They are dark green on the back and a bluish white on the inner side, the contrast of the two colors being very pleasing. Considering it in all its characters it is one of the most beautiful of pines.

In some collections it has been met with under the name of *P. mandshurica*, but this species is thought to approach *P. cembra* closely. A great deal of the confusion in names of evergreens from Japan arises from lack of care by the shippers from that country, the same plant coming from there at different times under different names. With the better knowledge we are all gaining of Japan this confusion may be cleared up and further prevented as a more intimate knowledge of the country and its floral treasures becomes public.

The cones of this pine are borne in clusters, and those familiar with the cones of our native *P. pungens* will find a close resemblance in the two, as they are cylindrical, scales hard and with recurved points, but in length those of the *P. koraiensis* exceed the cones of *P. pungens* by an inch or two.

Seeds of the *Pinus koraiensis* are now easily obtainable from Japan, and it is to be hoped young trees of it will soon be had for sale in our leading nurseries, not by ones or twos as now, but by dozens. And when they are to be had plant them in deep, well-drained soil and they will thrive as well as they do in their home in Japan.

JOSEPH MEEHAN.

Pinus Koratensis

not oftener seen than they are, in fact, they are rarely observed. Occasionally a gardener takes hold of them, and knowing how, produces fine crops of fruit every year. Some, however, do not know how. The writer was surprised a few days ago when passing a private place to see that a fig bush he had noticed through the Summer had been fixed for the Winter and in this way: It had been cut down to three feet from the ground and what was left of it had had leaves heaped up around it and straw over that. Now all that had been done was worse than useless. All the fruiting branches had been cut away, and the time spent in protecting the roots was thrown away, as they live without protection.

In the garden of Mrs. Thomas Meehan of Germantown are some of the finest fig bushes one could wish to see and these bushes each bear hundreds of figs every year. The bushes are dug around on one side to loosen their roots, and thrown over on the other side; then root and branch are covered with leaves and other material. This is done after the first freezings come in November. The bushes

BALTIMORE, MD.—Professor T. B. Symonds, State Entomologist for Maryland, has been elected secretary of the American Association of Horticultural Inspectors, in session at Chicago, and appointed as one of a committee of three to represent the Association of Economic Entomologists at the annual meeting of the American Association of Nurserymen next June to be held in Milwaukee, Wis. The report of the joint committee on a form inspection of nursery stock, submitted by its chairman, Orlando Harrison, of Berlin, was accepted and appropriate resolutions passed urging legislation to bring about uniform inspection of nursery stock.

Fern for Name.—G. D. Mass.—One of the Aspidiums; probably tsussimense.

(1) **Thrips on Carnations.**—I send you some affected carnation foliage; please tell me what the trouble is and what will prevent it. The varieties most affected are Pink and White Lawson. Penna. J. W.

—The carnation leaves are spotted from the attacks of thrips, to keep down which frequent sprayings with some good tobacco insecticide should be given.

(2) **Brazilian Melon Fruit.** I have several plants of Brazilian melon fruit that are looking fine, about three feet high, but no sign of any fruit coming on them. I have never grown this plant before, and would be pleased to receive some information concerning its treatment. P. B. New York.

—We do not know the Brazilian melon fruit. Can any of our readers assist this inquirer?

(3) **Camphor from the Camphor Tree.**—From what part of the tree is gum camphor made—the leaves or trunk? S. S. Louisiana.

—Camphor is obtained from the roots, trunk and branches, by exposing the chips in closed vessels to the vapor of boiling water.—(The Century Dictionary and Cyclopaedia.)

(4) **American Wonder Lemon not Fruiting.**—What can I do to make an American Wonder lemon tree produce fruit? It is growing nicely and is three years old, planted in a thirteen-inch tub in the best of soil—leaf mold and sand. P. B. New York.

—As the lemon tree appears to be in perfect health, and is growing nicely, there is nothing further that can be done; the flowers and fruit will show in due time. No doubt if the plant had been kept in a smaller pot or tub, where the roots would have been confined a little closer, fruit would have been borne this year; but as the plant is now established in such a large tub, there is nothing to do but wait.

(5) **Hardiness of *Cycas revoluta*.**—I would like to know how much cold *Cycas revoluta* will stand without injury. S. S. Louisiana.

—We do not know that any tests have ever been made with respect to the cold-resisting qualities of *Cycas revoluta*. It is safe to say, however, that the dormant stems would not be injured at any temperature that is above freezing point. A well-grown plant with its leaves thoroughly ripened would not be harmed in a temperature of 40 degrees, but a plant with newly made leaves would suffer at a temperature lower than 45 degrees.

(6) **Roses for Summer Trade.**—Please give the best method of handling roses in Winter in the greenhouse for Summer cut flower trade. We intend growing a stock for Summer trade exclusively. F. R. W. New York.

—Roses for Summer flowering under glass must be kept absolutely dormant during Winter. This is easily brought about by letting the plants dry down, naturally in the Fall, not permitting any fire heat in the houses until it is desired to start the plants growing, which should be about the beginning of March.

(8) **To Prevent Wilting of Poinsettias.**—We had some fine poinsettias, growing on a bench, which we cut for Christmas. A short time after being cut and placed in a vase in water we found them wilting. We at once removed them to a water tank; they remained there until the next morning, when they were mostly revived. We read an article somewhere which recommended the dipping of the stems in boiling water for a minute or so, which we did to another dozen; this seemed to stop the wilting. Can you give us any process better than the foregoing? CANADIAN. New Brunswick.

CYCLAMEN

Splendens Giganteum Hybrids

Extra well grown plants all colors in bud and bloom from 4 in. pots \$15.00; from 5 in. pots \$20.00 per 100.

Primula Obconica

The celebrated Roundford & Lattmans Hybrids in bud and bloom from 3 in. pots \$5.00; from 4 in. pots \$10.00; from 5 in. pots \$15.00 per 100.

SWEET PEAS in 4-in. pots, 3 to 5 plants to a pot, 12 to 18 in. high, 2c. each.

Correspondence invited.

ARTHUR CORNELIS, SOMERVILLE, N. J.

Asparagus Sprengeri

3 inch pots. \$4.00 per 100

S. G. BENJAMIN, Fishkill, N. Y.

—Burning the ends of the poinsettia stems with a lighted match or candle, or dipping them in very hot water, are both equally good methods for preventing the bracts and foliage from wilting. The object in doing this is to seal the end of the stem so that the sap will not flow away.

(9) **Marketing Parsley.**—Please inform me about forming bunches of parsley leaves for market, how many leaves to the bunch, etc. Also, please give me some idea of the prices obtainable, as I have no experience in regard to the matter. A. J. B. Fla.

For the New York market, parsley is bunched by tying the stems together with enough of them to form a bulk of from one to one and a half inches in diameter at the bottom of the stems. The leaves are left in a spreading form and usually average from six to eight inches long. Prices at this time for southern grown parsley are from \$3 to \$3.50 per 100 bunches; for greenhouse grown parsley, about \$1 to \$1.50 per 100 bunches.

BARGAIN PRICES IN A NO. 1 PLANTS

VARIETIES OF ERICAS FOR EASTER GROWING

Erica Cypripedium, well budded, pink, 4 in. pots, dozen \$3.00; 100 \$20.00.
Erica Cavendishi, for growing on, yellow, 2 1/2 in. pots, dozen \$2.00.
Erica Cavendishi, well budded, 5 1/2 in. pots, doz. \$18.00; 100 \$100.00.
Erica Cavendishi, well budded, 6 in., large, doz. \$20.00; 100 \$200.00.
Erica Persoblia Rubra, well budded, light pink, doz. \$2.50; 100 \$25.00.
Erica Translucens, well budded, 4 in., pink trumpet, doz. \$3.00; 100 \$25.00.
Erica Translucens, well budded, pink trumpet, 5 1/2 in. pots, doz. \$24.00; 100 \$150.00.
Boronia Elatior, red, fine, 4 1/2 in. pots, doz. \$2.00; 100 \$15.00.
Boronia Elatior, red, fine, 5 1/2 in. and 6 in. pots, doz. \$15.00; 100 \$100.00.
Genista Racemosus, fine, globular-shaped plants, from 5 in. pots, doz. \$4.00; 100 \$30.00; larger plants, 4 in. pots, doz. \$12.00; 7 in. pots, doz. \$18.00. Specimens and Standards, \$2.00 each.

FOR EASTER BLOOMING

Azalea Princess Victoria, finest pink, new, doz. \$6.00; 100 \$40.00.
Azalea, new lavender color, 10 to 12 in. crowns, \$12.00 per doz. No other such nice color among azaleas; fine, large, bushy plants.
BLOOMING NOW!
Epacris alba, 1 in. pots, doz. \$2.00.
Primula obconica, 4 1/2 in., doz. \$2.00.
Cyclamen Persicium, 5 in. pots, doz. \$4.00; 100 \$35.00.

THE WEEK'S WORK

Timme's Timely Teachings.

The Cuttings.

For the propagation of most species of florists' stock January and February are the most favorable months. Cuttings of many kinds of greenhouse plants, slow or unwilling to form roots at any other time, can now most rapidly and with probably least expense to the grower be made to root. The item of expense in providing stock for an ensuing season's trade, though never entirely disregarded by any grower, affords many angles from which it may be viewed, some of them frequently not taken. Thus the fact is often lost sight of that in many instances, especially when "ill-luck and mishap" are harassing companions of the propagator, the home-raised stock costs really much more per every dozen or hundred plants than if it had been purchased for cash. A sturdy cutting, taken from a good variety of a carnation, for instance, represents a future flower, and if but a small percentage of these cuttings strike, the others perishing, the actual cost of plants thus obtained is easily figured.

But success in the rooting of cuttings not only means minimum cost of the stock so produced, but also highest quality. Every one cutting of the ninety-five or more of the hundred put in the sand found to be well rooted is worth twice as much, will be more apt to make a fine plant than any one rooted cutting of the few picked out from a lot of decayed matter or hopelessly worthless stumps. This, as a general rule, furnishes exceptions, but they are very few, not enough to justify any propagator in busying himself working up stock belonging to this exceptional minority, to any great extent, when his time could be occupied to better advantage.

The Cutting Bench.

Of the many factors which contribute each its share to success in the rooting of cuttings proper construction and working condition of the bench selected for the purpose is one of the first to be considered. A bench conveniently located in a house where the heating, ventilating and shading facilities are under the complete control of the grower, any bench on which it is possible to grow the very best of plants and flowers, is also the one that gives best results in the rooting of cuttings of such kinds as at this season are to be propagated in quantity by the majority of greenhouse men. Any grower has such a house and such a bench at his disposal, and there is no need of fixing up any sort of an out-of-the-way affair for propagation, a place where probably everything else refuses to do well. The propagating bench should have sufficient piping underneath, arranged so that every part of the sand in the bench is uniformly warmed from below, its incline in the runs of pipes—if it is a hot water circuit—resulting in bottom heat slightly differing in degree at one end of the staging from that of the other, a decided advantage where many kinds of stock must be propagated. In constructing the bottom of the bench openings should be left to drain off surplus moisture, not the customary wide cracks which render the holding of an even moisture in the sand a difficult task, nor widely separated, little slits, which quickly fill up and mischief is sure to follow. In the matter of shading, for which provision must be made, there is probably nothing better than movable frames on which muslin is tacked, two sets being preferable to but one, so that a heavy or a light shading may be afforded as the propagator deems best. These frames are quickly made, last long and cost little. They should be of a size easy to handle in putting them up or taking them down from places fitted up for the purpose.

The Propagating Bed.

Cuttings that should now be struck, such as are to grow into fine plants in good season, are roses, carnations, vincas, German and English ivies, pelargoniums, scented, fancy and ivy-leaved geraniums, fuchsias, heliotropes, lemon verbenas, begonias, salvias, double petunias, lantanas, snapdragons and many others of which at present good cuttings can better be had than could be found earlier or are likely to be as fine for later

NEW PINK BABY RAMBLER, ANCHEN MULLER

increase of stock. For all these the usual medium in which to root them is sand, because it is cleaner, holds the unrooted cutting better in position, drains off more readily and can generally be obtained everywhere more easily in large quantities than any of the various other substances used here and there for the same purpose and with equally fine results if properly employed. Success with cuttings of any of the above named kinds has very little to do with color, coarseness or fine texture of the sand, but very much depends on its being pure, free of all decaying or decay-inviting matter; and if it is pure it serves the purpose just as well whether it has already been used in succession for several times or has been brought in fresh from the sand pit. The first and original cause of failure with cuttings is never the sand. Where cuttings rot and die off in great numbers and the wilting and dead matter is not promptly removed as soon as espied, there and then, of course, contamination of the sand is sure to be the immediate consequence and renders it unsafe and, indeed, unfit for any further use in any sort of cultural process of whatever kind. If, therefore, there is the least doubt in the mind of the propagator as to the sand being pure or not, he had better replace it with fresh sand, renew the sand for every batch of cuttings rather than to run the risk of losing his cuttings from a cause so easily removed.

The Taking and Treatment of Cuttings.

Much more of what stands for failure in the propagation of plants by cuttings is due to hopelessly unfit condition for root formation of the cutting when taken from the stock plant than to any other cause. A cutting with a too hard butt-end may finally root, but lots of time is wasted—root, too, in waiting for it to do so—when by cutting it again and at the right joint in preparing it for the sand, it would have proved all alive to business. The prime cause, however, of all the cutting bench troubles is the cutting taken when yet too soft and sappy or cut at too high a joint. These, unless managed with unusual skill, are certain to succumb to decay either before or after they are rooted. In the case of some kinds of stock, cuttings of this character give little trouble if pulled or cut off from the plant with a heel of harder wood left on. In most cases of this kind, however, it is better to give the shoots time to ripen or to attain size and sturdiness before considering them fit cuttings, and perhaps by being too hasty lose time and cuttings both and besides infect the sand for the destruction of anything ever so promising and in the best condition inserted in place of what died right after being started.

Cuttings and sand should be well

PINK, WHITE and CRIMSON Baby Rambler Roses

We offer a very nice lot of strong two year old dormant plants, which if potted up now will make elegant Easter stock.

PINK BABY RAMBLER

(Anchen Muller). A beautiful luminous shade of pink, a color which is always admired, \$3.50 per doz.; \$25.00 per 100.

CRIMSON BABY RAMBLER

(Mme. Norbert Levassent). Fine plants of this popular variety, \$2.00 per doz.; \$15.00 per 100.

WHITE BABY RAMBLER

(Katherina Zeimet). Pure white with yellow stamens, flowers produced in large candelabra shaped trusses, \$3.50 per doz.; \$25.00 per 100.

Always in Demand ARAUCARIA ROBUSTA COMPACTA and GLAUCA

JUST LOOK! An ARAUCARIA ROBUSTA COMPACTA OR EXCELSA GLAUCA, worth a ten dollar bill, perfect shape and color, 6-7 in. pots, 6-year-old, 4-5-6 tiers, 28 to 40 in. in height, the same in width, only \$3.00; 6-7 in. pots, 6-year-old, 4-5-6 tiers, 25 to 28 in. height, \$2.00 and \$2.50; 6-7 in. pots, 5-year-old, 3-4 tiers, 18 to 25 in. high, \$1.50 to \$1.75. **Excelsa**, 6-7 in. pots, 5-6 tiers, 25 to 30 in. high, \$1.50; 6 in. pots, 5-year-old, 5 tiers, 22 to 25 in. high, \$1.00 to \$1.25; 6 in. pots, 4-5 tiers, 4-5-year-old, 18-20-22 in. high, 7-8-9-10-year-old, 2-3 tiers, nice little plants, 6-8 in. high, 40c.

WHITEMANI, larger than 8 in. pot, planted in 7 in. pots, made up in June, three plants in a 7 in. pot, now as large as a bushel basket, price, \$1.25 to \$1.50 per pot; middle size, 75c.; very heavy specimens, \$1.00 per pot, 6 in. pots 60c. to 75c.

PIERSONI FERNS 4 in., 25c.; 5-5½-6 in. pots, 35c.-40c.-50c.

PTERIS WILSONI, 5½ in. pots, very handsome, much admired ferns, 20c.

AZALEA INDICA, Have an immense stock now planted in 6 in. and 7 in. pots, were grown for us under contract by an Azalea Specialist in Ghent, Belgium. Have only the leading varieties such as, **Mme. Van der Cruyssen**, (2500 of this well known variety of the finest shape, full of buds), **Nidus**, **Bernard Andrew Allen**, **Deutsche Perle**, **Simon Gardner**, **Empress of India**, **Prof. Walters**, **Apollo**, and 12 other more popular sorts, price 20c., 75c., \$1.00, \$1.25, \$1.50, \$1.75, \$2.00, \$2.50 each.

BOSTON FERNS, Have about 2,500 of this variety, 8 in. pots, made up as big as a wash-tub, worth \$3.00, \$1.25 to \$1.50 each; 7 in. pots, as large as a bushel basket, worth \$2.00, cut down to 75c. and \$1.00 each; 6 in. pots, very large, worth \$1.00, only 50c.; 5½ in. pots, 35c. and 40c. each.

KENTIA Forsteriana and Belmoreana, 4 in. pots, 8 to 20 in. high 35c. 5½ in., 5½ in., and 6 in. pots, bushy stocky plants, 50c., 60c., and 75c.

LATANIA Borbonica, 4 in., strong, 25c. each.

COCOS Weddelliana, 3 in. pots, 10-12-15 in. high, 15c.

ARECA Lutescens, 4 in. pots, made up three plants in a pot, 18-20-22 inches high, 20c. each.

FIGUS ELASTICA or RUBBER PLANTS, home grown and Belgium stock, 18-20 to 40 in., 5-5½ to 6 in. pots, 25c.-35c.-40c.-50c. and 60c. each; 7 in. pots, 75c.

ASPARAGUS plumosus nanus, 3 in. pots, \$7.00 per 100; 4 in. \$10.00 per 100; all bushy plants.

HYDRANGEA OTAKSA, Now is the time to force **Hydrangea Otaksa** for Easter blooming. Remember only pot grown will form successful for Easter, we grow ours in pots in the summer and plant them in cold frames (row inside); have about 500 to spare, 6 in. and 7 in. pots 25c., 35c., 50c. and 75c. each.

BEGONIA, new improved **Erford**, 4 in., strong, 20c.; 5½ in., 25c. each.

Please mention if plants are to be shipped with or without pots. All goods must travel at purchaser's risk. Cash with order, please.

turned. If all else is right, a pretty close stand in the rows will not hinder roots to form, nor will it invite decay or be objectionable in any way, provided the cuttings are potted up in time to prevent needless tangling of roots. Until roots appear the bed should be kept pretty moist by frequent sprinkling; after that it is safer to practice moderation in this respect, but not to the extent of allowing the sand to become dry.

ADVERTISING RATES.

One-half inch, 75c.; 3-4-inch, \$1.00; 1-inch, \$1.25; special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c., per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Evergreens for City Gardens.

It is always of interest to a florist or a nurseryman to note the evergreens to be found in city yards. The general impression is that not many sorts will thrive in such positions—an impression fostered by ill-looking specimens often seen there. But to the close observer it will be apparent that it is not so much the atmosphere of cities that is to blame for the condition spoken of as it is the soil. Every one knows what the building of houses means to the soil that is to surround them. Oftener than not the clay and sand from a cellar are used to make level the surface, or the surface is carted away to fill up a depression, both ways resulting in having a surface of the worst kind for trees to grow in. In many cities are side or front gardens in which trees are thriving, within sight of similar gardens in which like sorts are half dead. The reason for this is, that the flourishing ones are in good soil, the poor looking trees not. There is but little doubt that this is the true reason for the difference. Those loving trees should be sure that the soil is good where trees are to go, even if it becomes necessary to cut away what is there and bring in new soil, and this should be represented to customers by their neighboring florists.

Box bushes and the evergreen euonymus, E. japonicus and its golden and its silver-leaved varieties, are known to do well in cities. Both of these evergreens are suited when in partial shade, as they are pretty sure to be when near dwellings. There are two evergreen privets, the Ligustrum lucidum and L. japonicum, which thrive well in similar positions, but these two are not as hardy as the box and the Euonymus japonicus. L. japonicum may be called hardy in Philadelphia gardens; L. lucidum needs a sheltered place there. The last named is a lovely evergreen, having large, thick, shining green leaves. It gets through our Winters when well sheltered from wind and sun. The Nordmann, Colorado, silver and other firs do very well; so do the pines; the Austrian, especially, is often observed in a thriving condition. In fact, all pines are to be recommended. Not so much can be said of the spruces—Norway hemlock, white, etc., nor of the retinisporas. Insects infest them to a great degree; still, where a line of hose is handy, as it is in city gardens, insects can be kept under control very well by frequent sprayings. J. M.

Some Evils Worth Correcting.

Having just emerged from a year that has not been without its gloomy aspects, nevertheless tinged with the proverbial silver lining, it may be well for us, at the beginning of a new year, to pause and give a little consideration to some of the most important factors that during the period of depression have to a greater or less degree helped to intensify the untoward conditions through which we are passing, and, happily, have all but left behind.

First in importance among these conditions stands the subject of credits. The exigencies of business have demanded a better regulation of this necessary concomitant in all trade dealings, and not without success, be it stated; but much along this line has yet to be accomplished before the credit system of the country is placed on its smoothest working basis.

It cannot, we think, be questioned that during the financial panic, advantage has been unduly taken of the money constriction to withhold payment of bills long past due; some of these of large amount, others smaller, yet the failure or delay to liquidate all of them has had the tendency to generalize business, making it a much harder matter for all of us to tide over the unfavorable state of affairs with which we have been confronted. As a writer in a recent issue of the Outlook correctly puts it:

"In every stringency a host of people begin by not paying their bills. It is the delay in paying small bills even more than large ones that prolongs hard times, and unjustly and unnecessarily lays the burden on the backs of some of the most prudent and honest members of the community. An honest man always pays his debts. If misfortune overtakes him, the day of the discharge of his obligation is only postponed, it comes as soon as he can make ready for it. But in a time of panic it is every man's pressing duty to pay his debts with the utmost promptness."

E. V. Hallock
Re-appointed Director S. A. F. O. H.

And a curtailment or restriction of credit privileges put in operation, enforced and adhered to as far as possible and practicable, would make the resulting burden of hard times when they do come fall less onerous upon all concerned.

We hope the credit system inaugurated last year so auspiciously and, apparently, successfully, in some quarters will become general in this business, being amended for betterment all around whenever needed improvements assert themselves.

Another evil existing in this as in other industries is unfair competition. This important subject was dealt with in a forceful manner by S. S. Skidelsky in a paper read before the Florists' Club of Philadelphia at its meeting this week. The paper appears in another column, and to it we especially direct the attention of our readers.

All of us have the greatest respect for and admiration of the man who fairly and squarely fights the business battle in which he is engaged; conversely, nothing but contempt is meted out to the individual so well described by Mr. Skidelsky who practices what he terms "foul competition," cutting prices, decriing his neighbor's wares, and generally indulging in methods that are tabooed by all business men possessed of sound principle, of the liberal spirit, and of the view that the world is big enough for all to make an honest living if permitted to do so. It is, of course, a very difficult matter to change the leopard's spots; the "foul" competitor's detested and detestable derogatory drivel is his best and some-

times only asset, and he uses it to the limit, unfortunately not without effect. But when it comes to prices, he who cuts under his neighbor is generally the fellow who is operating under the advantages which credit and delayed or non-payment of bills due and owing afford. Here is his vulnerable point and where he should be attacked. To fight him by employing tactics similar to his own would but lower the status of all business dealings and tend to general demoralization. Deprive him of the weapon where with you furnish him to harm yourself—credit—and the end of his business career will not be long in materializing.

We have referred on several previous occasions to the evil of substitution, the practice of supplying stock not ordered or wanted. It is worth while giving some consideration to this matter, which, harmful alike to buyer and seller, creates lack of confidence and consequent loss of trade, on the one hand, and disappointment and monetary loss on the other.

So in making resolutions for the new year just entered upon, include among your good intentions the helping forward of movements that will tend to regulate our much abused credit system, to ensure fair competition, and to establish within our ranks the reputation of at all times regarding as the highest and strongest promoter of business interests—the "square deal."

Society of American Florists and Ornamental Horticulturists.

Executive Board Meeting.

Pursuant to call by President Stewart, the executive committee met in special session at Horticultural Hall, Philadelphia, on December 28. There were present Messrs. Stewart, Elliott, Kasting, Westcott, Beatty, Farquhar, Traendly, Hallock and Rudd. The president appointed Messrs. Robert Craig and William F. Gude to act in the places of Messrs. Wirth and Murray, who were not present. The president announced that he had appointed W. N. Rudd as secretary of the society, in accordance with the by-laws, to fill the vacancy caused by the death of P. J. Hauswirth, which action was approved by the committee.

President Stewart prefaced his formal announcements of the business before the meeting by a few words, setting forth most felicitously the loss which had been sustained by the society and by the trade at large through the death of P. J. Hauswirth, and on motion a committee consisting of W. F. Kasting, Frank H. Traendly and William F. Gude was appointed to draw up resolutions, which committee later on presented the following report, which was adopted:

Whereas, we, the Executive Committee of the S. A. F. O. H., in special session assembled in the City of Philadelphia, Pa., this 28th day of December, have learned of the sad death of our beloved secretary, which occurred in the City of Chicago, on December 1, 1907. Therefore, be it

Resolved by the Executive Committee of the S. A. F. O. H. that in the death of Mr. Hauswirth, the society has lost a good worker and a loyal friend. His motto always was the greatest good to the greatest number, and best interests of all concerned. For time and ability freely given to the best interest of our society, he stood without a peer. With him the common good was always first; he was ever ready to sacrifice his own interests for those of others. If he had a fault, it was that in his generosity he sacrificed his own interests too much. For time freely given in the best interests of this society and for the welfare of horticulture at large, we are indebted beyond expression.

As an acknowledgment of this debt and as a token of grief we feel at his sad death, these resolutions are to be spread upon the records of this society and a copy sent to his bereaved family.

(Frank H. Traendly,
Signed, W. F. Kasting,
William F. Gude.)

The secretary stated that there was a net balance of the society's funds in the hands of the estate of the late secretary amounting to approximately \$1,500 and that the family were ready to turn this sum over, but under the advice of their attorney had asked that a complete check of all society matters, which had been in his hands, should be made and in order that there should be no uncertainty. The secretary had deemed this also an eminently proper course to pursue, so that any fears on the part of members of the society, arising through groundless rumors which always are circulated in such unfortunate cases, might be set at rest beyond peradventure.

At the afternoon session Mr. Farquhar was unable to be present and the president appointed Edwin Lonsdale to take Mr. Farquhar's place. On motion of Mr. Kasting the Flower Show Committee was authorized to use for awards at the National Flower Show, to be held in Chicago, November, 1908, ten silver gilt medals, 25 silver medals, 25 bronze medals and as many certificates of merit as would be needed for worthy subjects there shown.

The thanks of the members of the committee were then formally tendered to President Stewart for his long service as secretary and president of the Society of American Florists and Ornamental Horticulturists.

Appointment of Director.

President Traendly has appointed E. V. Hallock of Queens, N. Y., as director, to fill the vacancy on the executive board of the S. A. F. O. H., occasioned by Mr. Traendly's election as president.

W. N. Rubin, Secretary.

Registration of a Hydrangea.

Once more, in his usual vigorous style, and with his natural impulse to attempt to clear the real issue in the now well-known hydrangea registration case, the "editor of our Boston contemporary, who is also the ex-secretary of the S. A. F. O. H.," as well as the ex-registrar of the national society, responsible for the "official" publication of the name *Hydrangea arborescens alba grandiflora*, tenders an additional excuse; and, as is his wont, in doing so plunges himself deeper into the mire of condemnation, for his official act complained of, in which he has been wallowing from the time exception was first taken to the registered name in question. He now advances the innocent statement: "The truth is that nothing has appeared thus far to show that Mr. Hill's variety of *Hydrangea arborescens* has been compared with the specimens named by Torrey and Gray in 1849. This could be done next Summer when the plants are in bloom and the question of identity, at least, settled properly." And then he goes on to tell about what "may" and what "might be," etc. Facts, not speculative theories, are now demanded. It may enlighten our contemporary to state that the self-same hydrangea is being listed and sold by firms other than the one he mentions under the name given it by Torrey and Gray—*H. arborescens var. sterilis*. Evidently these concerns, at least, were convinced of the "identity" of the plant.

It is admitted by the firm registering the hydrangea that they knew plantmen who had the hydrangea in question "growing under their very noses for years and years," before the new name was sent in to the S. A. F. O. H. registration department (see letter in Horticulture, page 573, issue of November 2, 1907), thus demonstrating a prior knowledge of the plant's existence, and it requires no "distorted" imagination to assume, at least, that before registering their name, an effort should have been made to establish their right to register the appellation now called in question before submitting the same to the "Brother Registrar" of the S. A. F. O. H. for publication. This was all the more necessary in view of the fact that the national society and its official "accept without question all names submitted for registration," a condition which admits of the registration of a name for any plant, new or old, or for no plant at all so far as the society knows, and which at the same time holds the S. A. F. O. H. responsible for the registration entry, not a wise measure, to say the least.

Again, if comparison as to "identity" of the plants referred to is possible "next Summer," it is no "distorted" imagination that would conclude that a similar comparison was possible, if desired, anterior to the registration entry being made, the conditions for such comparison being available then as well as next year, both to the firm registering and the S. A. F. O. H. registrar.

The better plan for all concerned in the meantime is, as we have previously suggested (never demanded), for the Messrs. Hill to withdraw the name they have attached to the hydrangea until the "mays" and "might bes" propounded by our shifty contemporary have been indisputably settled in the most practical and convincing manner; and this course the usual good judgment of this well-known and careful firm will doubtless debate, especially in view of their statement that "had they known of the previous name they would not have suggested any other." On this latter point, it seems to us, they now have been convincingly informed.

At all events, further "excuses" tendered with the view of assisting our esteemed friend out of his "plight," though characteristic, are worse than useless; and there has, we think, been adduced evidence enough, and no doubt more can be forthcoming if wanted, to call for the necessary action in the premises on the part of the S. A. F. O. H., to the end that the work of its registration and nomenclature department shall be backed up to an authoritative and reliable, and not regarded as being a mere farce.

The matter is closed so far as we are concerned. It was referred to more to demonstrate the weakness of what should be, if properly conducted, an unassailable and reliable national registration system, than to confirm the acknowledgment of the ex-secretary of the S. A. F. O. H. that he was not "omniscient" in horticultural matters, a fact so

it would be hard to prove, at least, needed to be directed to it. The speech, just he has shown in this discussion is as much to be regretted as his attempt to gloss over something that surely demands investigation, if not condemnation, is far from creditable.

The Late A. B. Howard.

Arthur B. Howard, one of the oldest and best known florists, seedsmen and fruit growers in Massachusetts died at his home in Belchertown, Mass., December 26. He was born in Belchertown, June 1, 1838, and had lived on the place where he died nearly all his life. He leaves a son, Everett C., and a daughter, Naomi, both of whom live at home. Mr. Howard was a man of strong personality, sterling integrity and tireless energy. When in his late teens, he lived about two years at Oneida, N. Y., where he got his first training in horticulture. He was the originator of the best varieties of yerbenas and zinnias, which have been widely distributed, and his Star petunia, introduced six years ago, is now catalogued by nearly all seedsmen in this country and Europe and regarded as the best of bedding varieties. His standard of perfection was very high, and he usually worked on his new varieties many years to get them as near his ideal as possible before introducing them. It required twenty years of breeding and selection to fix the characters he desired in the Star petunia.

Mr. Howard was also a large and successful grower of the apple, pear, peach and strawberry. He grew the latter fruit for market more than fifty years, and was the first to grow it for that purpose in this section. During the past twenty-five years he raised and fruited over ten thousand seedling strawberries from crosses of the best named varie-

The Late A. B. Howard

ties, working to produce the ideal sorts and some of these proved so much better and more profitable than the best named kinds with him that he grew them almost exclusively for fruiting. None of them was disseminated, as he proposed to keep them for his own use, and his fruit usually sold for higher prices than the best from other growers. He was a frequent contributor to agricultural and horticultural papers and a regular exhibitor of his products at fairs, his exhibits having been awarded about two thousand premiums during the past thirty years.

The business will be continued by his son Everett C., who is also a capable and enthusiastic horticulturist. L. W. G.

What is the Value of a Fruit Tree Four Years in Orchard?

A few years ago I was called upon to assess the loss upon an orchard that had been burned, the tree originating from a railroad. The trees in this case were about twelve years old, and were bearing fair crops of fruit. I assessed the damage at fifty dollars a tree.

The New York Central Railroad recently called upon me to estimate the value of two trees about thirty years old that had been injured and partly torn out by having a derrick cabled to them. I examined the trees, which were in a fairly good condition, and bearing quite regularly from five to six barrels of apples some years and from three to four barrels others. The value of these trees I assessed at one hundred dollars apiece, as they pay above six per cent. annually on their value. Had they been in perfect condition, and as large as many trees are that produce from seven to ten barrels, I

should have assessed them at one hundred and fifty dollars apiece.

The value of a tree of this size, four years old, can be had not only on the four year's time, but in their development. For the four years additional required to get another lot of trees up to their value, which will make eight years. At that time many varieties will produce from \$1.75 to \$2 income per tree. I would place the damage at \$2 a tree, in this case, as they would produce an interest of six per cent. upon their value with an increase each year thereafter. GEORGE T. POWELL, in National Nurtureman.

OUR READERS' VIEWS

Salvia Zurich.

Editor Florists' Exchange:

We were much pleased with this new idea the last season and advise anyone growing salvia to try it. It has proven superior with us and other florists here to the well-known Eouire and Lord Familyroy, which we grew before, and we are now growing it exclusively. We were surprised to see our plants in bloom by the end of June, though they were much younger than the older kinds, and they kept on blooming just as long as the rest. We did not have very many plants last year and used it as far as we could with our particular trade, who must have a bed of scarlet sage every year, and they were delighted to have the plants bloom so early, where in other years the older early flowering varieties were hardly at their best by the end of August.

The growth of S. Zurich is not nearly so tall as that of the older sorts and it seems to flower much more freely, while the color is of the brightest scarlet. All who have a trade in bedding plants should grow this new kind in large quantities; it is a good thing and out of the experimental stage. S.

Ohio.

The Cost of Seed Catalogues.

Editor Florists' Exchange:

It is not often that the columns of The Florists' Exchange afford opportunity to the critics to "jump on" statements therein conveyed, but by that of your correspondent, signing himself "V.," page 8, issue of January 4, 1908, wherein he says that every seedsmen must "deplore the fact that every seed consumer in America who purchases \$1, or even less, of seeds, naturally will receive at the very least seed books whose absolute printing cost has been surely much in advance of \$2," such an opening is afforded.

The writer has never seen census or other statistics giving the number of purchasers of seeds in the United States, but a conservative estimate would be that there are at the very least 2,000,000 such. This, according to "V.," would place the total value of the seed catalogues distributed, including mailing cost, great and small, at \$1,000,000. I figure the cost of his catalogue to each dealer in the trade does not average \$2,000. If this is at all correct, "V.'s" statement would give us 2,000 seedsmen in the United States handling fairly large catalogues, but the actual fact is there are not 250 such firms. After we have listed some 50 to 75 of the largest of these, issuing all the way from 400,000 catalogues down to 25,000, the other 175 to 200 dealers will not average a circulation of 10,000 copies. There may be in addition from 500 to 5,000 small seed houses issuing catalogues whose average cost would not exceed \$250 to \$300.

How in the world "V." figures a loss of \$1 on each purchaser of seeds puzzles me! In this connection where do the seedsmen of the United States come in at the end of their financial year after pocketing a loss of a straight \$2,000,000?

A rough calculation shows about 7,500,000 seed catalogues issued annually, which at an average cost of six for one dollar, including mailing, and which I think a very fair allowance, indicates a manufacturing cost annually to the seed trade of \$1,250,000.

STATISTICIAN.

A NOVELTY IN TOMATOES. The Southern California Acclimatizing Association, Santa Barbara, Cal., draw attention to the new *Tomato Regina Sabae*, introduced by that firm from Rhodesia, South Africa, which, they say, ranks high among the best of bigonias and bromas, for many years great favorites in California gardens. It is described as being "an extra vigorous grower; foliage shining, light green, most finely cut; flowers measuring three inches across are in terminal panicles. They are of a rich, rose-garnet color, and also sweet scented, and continue to appear from the end of September until May.

It is named after the Queen of Sheba, of Biblical fame, this plant having been found rambling over the ruins of Zombazi, Rhodesia, where recent investigations have located the capital of her ancient kingdom of Ophir."

American Carnation Society.

The seventeenth annual meeting and exhibition of this society will be held in the National Rifles Hall, No. 918 G street, N. W., Washington, D. C., January 28, 29 and 30, 1908. Exhibition on the first floor, sessions on the second floor. Address all exhibits to Chas. McCauley, National Rifles Hall, No. 918 G street, N. W., Washington, D. C.

Express charges on all exhibits must be prepaid.

Special tables will be provided for exhibits not intended for competition.

For exhibits other than carnations arrangements must be made through Chas. McCauley, Washington, D. C., Eighteenth and Kearney streets, N. E.

The society provides vases of uniform size for exhibitors' use respectively for 100, 50 and 25 blooms. It is obligatory upon exhibitors to use these vases for classes A and B, and for entries for certificates of merit.

In all other classes exhibitors have the option of using the society's vases or providing their own, as they may elect.

Rules and Regulations.

1st. All entries must be forwarded so as to reach the secretary, Albert M. Herr, Lancaster, Pa., not later than Wednesday, January 15. Exhibitors from a distance will please note the date and mail accordingly, as a charge of \$1 for each variety entered will be made for those not entered as above requested.

2nd. All entries not staged by 1 p. m., January 28, will be disqualified from any and all competition excepting for "certificate of merit."

3rd. None but members of the society are eligible to compete for any prizes, medals or certificates.

4th. All exhibits for competition must have the variety correctly labeled, if a named sort, or numbered if an unnamed seedling. The society will furnish a uniform card for this purpose, and varieties not labeled or numbered with this card will not be judged in any of the classes. The secretary will typewrite these cards for exhibitors who get their entries in early enough for him to do it, and furnish them to the exhibitor in Washington any time during the morning of January 28.

5th. The same vase is not allowed to compete for more than one prize, excepting those entered for certificates and where otherwise stated.

Papers.

The following papers will be presented:

"Experiments in Carnation Growing by the Department of Agriculture," by Dr. B. T. Galloway, Washington, D. C.

"Carnation Breeding," by Prof. J. B. Norton, Washington, D. C.

"What the buyer of a New Carnation should expect from the Originator," by S. S. Skidelsky, Philadelphia, Penna.

"What the Originator of a New Carnation should expect of the buyer," by W. N. Rudd, Morgan Park, Ill.

"Special Points on Carnation Hybridizing," by Peter Fisher, Ellis, Mass.; C. W. Ward, Queens, N. Y.; Fred. Dornier, Lafayette, Ind.; and Richard Witterstaetter, Cincinnati, Ohio.

"Cultural Methods for Carnations," by Irving Gingrich, South Bend, Ind.

Question Box.

This feature of the society is always open and if members will kindly submit their questions to the secretary, Albert M. Herr, Lancaster, Pa., before January 20, their questions will be assigned some competent party to answer.

Rules Governing the Award of Certificates of Merit.

A variety must have been bloomed not less than three years; not less than fifty blooms must be shown, and an entrance fee of \$5 is charged for each variety. The variety must be properly labeled with the society's card. (See Rules and Regulations.)

Preliminary Certificate.

This can be competed for by two-year-old seedlings, twelve blooms or more to be shown, and an entrance fee of \$2 paid for each variety. The variety must be properly labeled with the society's card. (See Rules and Regulations.)

General Premiums.

Class A is open to all varieties, seedlings or standard sorts. For vases of 100 blooms the first prize is \$10; the second, \$6, the classification being as follows: White, Enchantress shade of pink, Lawson shade of pink, Winsor shade of pink, scarlet, crimson, yellow variegated, white variegated, and any other color.

Class B, vases of 50 blooms, open to all varieties disseminated prior to July 1, 1907. The prizes are, first, \$5; second, \$3, the classification being: Lady Bonnetful, White Perfection, any other white, Enchantress, any other Enchantress shade of pink, Winsor, Pink Enchantress, any other pink (this shade), Lawson, Aristocrat, Pink Imperial, any other dark pink, Robert Craig, Red Chief, Victory, Beacon, any other scarlet, Mrs. M. A. Patten, Imperial, any other white variegated, Harry Penn, Harlowarden, any other crimson, Eldorado, any other yellow variegated, Prosperity, any other color; three prizes may be awarded in the last named class.

The American Carnation Society Medals.

Gold, silver and bronze medals will be given for the best, second best and third best vase of 100 blooms, any variety, any color.

Carnation President Seelye

Grower and Introducer, H. W. Field, Northampton, Mass.

Special Medals of the Society of American Florists.

A silver medal and a bronze medal, respectively, will be awarded for the best and second best vase of 50 blooms of carnations not yet disseminated; the variety to be in all cases of American origin.

Judges are to reserve awards in this class if in their opinion the exhibits are not worthy of the medals.

Special Prizes.

The Henry E. Michell Company, Philadelphia, Pa., offer a silver vase valued at \$10 for the best 100 blooms of carnations in four varieties, twenty-five blooms to a variety. Open to private gardeners only.

Part of Bench of Carnation President Seelye

Grower and Introducer, H. W. Field, Northampton, Mass.

Photo taken after Christmas Week, 1907

Peter Bisset, Washington, D. C., offers \$10 in gold for the best display of carnations grown by a private gardener distinct from Michell's prize.

Peter Fisher, Ellis, Mass., offers three prizes for the best fifty blooms of Beacon, first, \$12; second, \$8; third, \$5.

Geo. H. Cooke, Washington, D. C., offers \$10 in gold for the best 25 blooms pink seedling or sport darker than Enchantress and lighter than Lawson, never before winning a prize or medal. Those having a preliminary certificate eligible. Entries for this prize will not be eligible to compete for any other prize.

Geo. C. Shaffer, Washington, D. C., offers \$10 in gold for the best vase of 50 blooms, not more than three varieties, open only to growers having less than 20,000 feet of glass.

S. C. Briggs, Washington, D. C., offers \$10 in gold for the best vase of white carnations, 50 blooms, distinct from other entries.

John Robertson, Washington, D. C., offers \$5 cash for best 25 blooms of Winsor, distinct from other entries.

J. J. Harty, Washington, D. C., offers a silver cup to the exhibitor making the largest display—all vases in all classes being counted as part of this display.

Z. D. Blackstone, Washington, D. C., offers \$10 in gold for the best 50 blooms of white carnations, distinct from other entries.

C. A. Goldsmith, jeweler, Washington, D. C., offers a cup or stein for the best fifty blooms of red—new or standard variety. Vases for this prize not to be entered in any other class. Red meaning Beacon, Victory or Craig shade of red.

Notice.

The one and one-third fare (railroad concession) has been again secured, and in order that we may not fall short of the required number every member is requested to use this certificate method and solicit the company of some fellow florists from his vicinity. We want not only a good show but a big meeting, and your hearty cooperation is requested. Come and meet old friends and make new ones. Come, get acquainted with the men with whom you do business.

Special.

With an attendance of almost two hundred at our last year's meeting, we had to hustle to get the required number of certificates, and could not get the agent to sign them until the last minute, causing much annoyance and delay. Even if you do not save money or do not intend to use your return certificate, kindly take a few minutes and get one to help the fellow along to whom it means dollars and cents.

Come.

With the meeting in the Capital of the United States the Breeders' Association meeting at the same time and a program such as is here offered we ought to have the largest meeting in the history of this society. To assure this we want not only our own members to come, but as many prospective members as you can persuade to accompany you.

Hotels.

The Raleigh will be headquarters. It is a first-class hotel and can accommodate all of our members who wish to stop there. The rate is from \$2 per day upward.

Special Notice.

If you wish to save yourself and the society trouble at the next meeting, kindly send check to the value of \$2 for your dues for 1907, and \$3 for new members. Make checks payable to Albert M. Herr, secretary, and mail the same to him at Lancaster, Pa.

Two Judges and One Director to Elect.

There will be two judges to elect at this meeting to replace Wm. Nicholson, whose term expires, and William Scott, who has resigned on account of ill health.

There will be one director to elect at the meeting to replace J. S. Wilson, whose term expires with this meeting.

ALBERT M. HERR,
Secretary.

FRED LEMON,
President.

Carnation President Seelye.

This carnation is a seedling from Mrs. T. W. Lawson and The Queen, and is now in its fourth year. During the past three years we have thoroughly tested it and under every condition it has proved to be a profitable variety. The condition under which it has proved to develop best is in a moderately heavy soil and in a night temperature of not more than 50 to 52 degrees. With this treatment a splendid growth is developed which produces an abundance of long-stemmed, fine-formed flowers, 3 to 3½ inches in diameter, with absolutely no split calyxes and very few second grade blooms.

The photographs herewith shown were taken Christmas week of last year and for weeks previous to this time the flowers were fully as good as those seen in the picture, which prove it to be a fine Midwinter carnation. The flower when opening is creamy white, sometimes shaded with pink; when fully open a pure white.

Northampton, Mass.

H. W. FIELD.

Competition, Fair and Foul.

Read before the Philadelphia Florists' Club by S. S. Skidelsky, January 7, 1908.

Competition, it is claimed, is the life or trade, and so perhaps it is, provided, of course, the "live and let live principle" is not lost sight of. It is an axiomatic truth—and we are beginning to realize it, to some extent

S. S. Skidelsky

at least that success in its broader sense hinges, not upon the failure of others, but upon the general welfare and prosperity of the community. The idea that one man's failures constitute another man's success, or vice versa, as we have been led to believe by those whose vision is circumscribed by the

ramifications of their pocket-books, has long since been relegated, in theory at least, to the rubbish heap of similar fallacies, having no foundation in fact.

The progressive business man of to-day is inclined to take a more rational and a broader view of business conditions and business opportunities. It begins to dawn upon him that the fundamental principle underlying the success of any enterprise, great or small, must first of all be sound in itself, else no enterprise can possibly endure.

Go where we may and look where we choose, the signs of the times point clearly to a general awakening of public conscience to a general revival of that spirit of justice which, since times immemorial and throughout the whole range of history—both ancient and modern—was never known to fail in its struggle for a worthy cause.

We seem to realize at last that the "corrupt man of business," to quote President Roosevelt, "is as great a foe to the country as the corrupt politician." We hear it also from the pulpit, at the banker's table, in the corner grocery store. We seem to realize that the time has come to call a halt to iniquities, that God Almighty had never intended to concentrate all the privileges and all the opportunities in the hands of the few, that the world is broad enough for all willing to try their chances in it.

It is claimed—and not without good reason perhaps—that the wave of materialism which has swept our country is gradually expending its force and that the succeeding generation will witness a complete transformation in our ideals and in our moral make-up. Be that as it may, the fact is patent that our tendencies and aspirations are still steeped in the mire of greed, that we are still resembling our brothers in the jungle, one arrayed against the other, the strong preying upon the weak, the mighty crushing the small.

That green monster, jealousy, prompted by the inexorable dictator, the almighty dollar, does not only rule us but it rules us with an iron rod that, at times, and to many of us, is well-nigh unbearable.

"Peace on earth and good will toward men," is a beautiful injunction, having the right ring to it—in church, but nowhere else. In our daily intercourse with our fellow men we cannot possibly be governed by such obsolete rules.

"Business is business" bears a more practical sound to our ears. It is our favorite slogan and, in our estimation, it is broad and powerful enough to cover up a multitude of sins.

It is not my object, however, to deal in platitudes, nor do I wish to assume the role of the preacher, whose business it is to exhort his audience.

The subject I have chosen for my paper need not necessarily take me into a labyrinth of figures and data in order to prove that two multiplied by two makes four. Nor need I depart far from my course in quest of examples in order to illustrate the striking contrast between the methods of fair and those of foul competition. Examples of either and both are at our very doors. We behold the one with a feeling of satisfaction and we become inspired with confidence in our fellow-man—the sight of the other fills us with disgust and suspicion.

Fair Competition.

Fair competition courts the light of day. Having nothing to fear and nothing to conceal, it stands upon a pedestal of its own creation, firm and indestructible, in full view of an exacting multitude, being eager to prove and to convince, striving to achieve its success not by the chthonian way of fraud and deception, but by the straighter path of honorable means and honest business methods. Fair competition believes in the "live and let live principle." Having learned that lesson in its own school of experience, it is eager to promulgate its truth to the world at large, causing no detriment to its own interests, no ill results to its own pocket-book. It is like an open book, accessible to all wishing to peruse its pages. Fair competition goes into the open market, firmly convinced that merit must and will win in the end, that success, if it is to be permanent, must rest not upon a quicksand of uncertainty, but upon a bed rock of stability. It makes no rash promises, it shuns reckless statements, it abhors fabrications and adulterations of all sorts, ever aiming to improve rather than to cheapen quality, ever striving to win and to hold public confidence without which success is impossible.

Fair competition does not eringe, does not fawn and does not sham, such despicable methods being foreign to its business policy. Nor does it concern itself with the affairs of its rivals for the purpose of ascertaining their methods in order to underbid and to undersell them.

ing profit. A race of people who are free from eating examples of concern that may go to the wall because of such reason, and of others that are being that way by leaps and bounds.

Having arrived at this logical conclusion, fair competition becomes conscious of its own impregnable position. It has cast its anchor, as it were, in the harbor of safety, never fearing the assaults and calumnies of the numerous "cheap Johns" who would fain see a tidal wave engulf their successful competitor.

Foul Competition.

I doubt if any of the gentlemen present here will take exception to my assertion that foul competition is a curse to the business world. Being utterly devoid of business or any other principles, foul competition works on the assumption that there are fools plenty eager to swallow the tempting bait—hook and all—called "cheap." Cheap! The very word has a sinister meaning if considered in its proper light. Cheap bulbs, like cheap clothes, yield but cheap results. Cheap plants come dear in the end, a cheap design, a floral monstrosity at so many nickels or dimes per foot, is a veritable eyesore, as well as an insult to the dead, and so all along the line.

Foul competition does not end here, however. There is a type of it, so low and degraded, so vile and treacherous, that the wonder is how any respectable and self-respecting business man can tolerate the moral stench of its very presence. Conceal-

Christmas Plant Display of John Coombs, Hartford, Conn.

If John sees fit to peddle his Finch geraniums at 60c, or 75c per dozen, heralding that fact for months in advance in the "locals," with a view of cornering the geranium market and incidentally to put his rival out of business, it is John's own affair, of course. Fair competition does not attempt to follow his methods, much less to "go him one better," knowing full well that such prices do not cover the cost of production, let alone a living profit; realizing that by attempting to corner the market John will inevitably get into a tight corner himself, and it is seldom indeed that it errs in its judgment.

Fair competition has nipped out its own way of doing things and it follows its own business methods. It reasons thus:—All things being equal, the cost of production plus the cost of marketing the product, plus a legitimate profit, the price to the consumer must be clearly defined and based upon strict business lines, that any deviation from this straight business course either one way or the other must inevitably result either in a loss of confidence and custom, if the quality of the product be cheapened, else in financial ruin to the concern itself if quality be maintained at the expense of its legiti-

ed in iniquity and fostered in an atmosphere of fraud and corruption, unscrupulous, morally distorted, suave and cunning, foul competition has but one object in view and that to attain its ignoble end regardless of means. In its anxiety to grasp everything within sight it is by no means content with the "purse" only, which the greatest poet of all times characterizes as "trash" and the slave of thousands. It goes a step or two further, considering it good business tactics to reflect upon the name and the honor and to attack the reputation of a rival in business. It never occurs to these fellows that "he who steals my purse steals trash, but he that filches from me my good name robs me of that which not enriches him and makes me poor indeed." Honor and justice mean empty sounds to their ears, and business ethics are an unknown quantity to them. They will not at all hesitate to tell you that the design or the decoration put up by Mr. Brown is not worth half the price paid for it, that the work is poor and that Mr. Brown is a foxy fellow anyway, one who will bear watching, on the road they will make it their business to sling dirt in every direction, in the hope of striking some competitor or other, leaving a trail of moral

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 23rd St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Delivers anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2310 and 4065.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Prest. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National reputation and we are prepared to execute commissions in that best style in Chicago and its environs.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

fifth behind them that, to the fair minded man, is nauseating in the extreme. They will pick up a plant of a rival concern and will pass judgment upon it there and then; in their estimation it is a very poor specimen, indeed, the price paid for it being most unreasonable, of course.

New varieties of carnations lend themselves especially to attacks and to "knock-out blows," and these are often dealt without mercy. "Don't touch it," you will hear them say, "it is a cropper, it has a weak constitution, it makes a measly growth, the calyx bursts, the blooms are ragged, the stem is short, and you had better leave it alone." And all this result without having the faintest idea of the true merits or faults of the variety in question.

If it be a bunch of lily bulbs going or gone to the bad, as often happens, here is a splendid opportunity to put in their ghastly work. As a matter of course, the concern that supplied these bulbs is to be blamed for the poor results. The concern in question, they will tell you, is a back number anyway and is losing prestige and ground every day. In fact, there are all sorts of rumors. Has not somebody told him of somebody somewhere in Missouri or Connecticut who had a similar experience with lily bulbs bought of this very unreliable concern? In fact, Mr. So and So had the same trouble during the past few seasons, "but now that he has our bulbs, you ought to see his lilies—perfect peaches and no mistake."

To be sure, men of this ilk soon show their true colors and, like all scamps, they will sooner or later defeat their own ends. Nevertheless, the mischief they create has, for the time being at least, a demoralizing effect upon an otherwise clear business horizon.

The Remedy.

How to discourage such abominable practices, how to counteract such pernicious influences upon the trade are indeed vital questions that are well worth our while to consider seriously. If it be true, as somebody has aptly put it, that "no shady transaction can stand the limelight of publicity," it may be worthy of our effort to turn on that light in its full force. Says Dr. Torrey, the evangelist, "A business man who says that every other business man is dishonest or a liar is a liar and a thief himself." An evil that affects us all alike must not be ignored. A sneak at random, to say the least, is a troublesome creature indeed.

CLUB AND SOCIETY DOINGS.

NEW JERSEY FLORICULTURAL SOCIETY.—Installation night was observed on the 3d inst. by this society when president, Malcolm MacRorie; vice-president, Henry Hallig; secretary, Orson A. Miller, and treasurer, William Reid entered upon their duties for the current year. Satisfactory reports for the past year were read by secretary and treasurer, and the winners of the prizes in the competitive monthly shows announced as follows: First, Peter Duff, gardener to Mr. J. Crosby

Brown; second, William Reid, gardener to the Colgates; third, Max Schneider, gardener to Mr. Charles Hathaway; and for the special prize for growers without glass, Arthur T. Caparn, gardener to Mr. Stewart Hartshorne. Among the awards for exhibits entered not for competition, certificates were given to E. R. Pierson Company, Lager & Hurrell, Julius Rochus Company, W. A. Manda, Robert Scott, Thomas Jones, Joseph A. Manda, J. C. Williams and Henry Hornacker. Cash prizes aggregating forty dollars were given by the following: Peter Henderson & Company, J. M. Thorburn & Company, Vaughan's Seed Store and E. R. Pierson Company.

Orchids were shown by Lager & Hurrell, Thomas Jones and Orson A. Miller, East Orange, N. J., the new secretary, who has come out as a grower for the trade. All of these men speak of a revival of interest in the cypripedium, which of late has been partially eclipsed by the more brilliant but now so common cattleya. A vase of Anthurium Andreanum giganteum was displayed by Joseph A. Manda; roses by Mr. Douglas Robinson (John Garvan, gardener) and violets by Mr. Charles Hathaway (Max Schneider, gardener). Two new members were elected—E. Dare, Maplewood; and Stewart Dickson, West Orange. It was decided to hold special carnation, rose and dahlia nights, also a Fall chrysanthemum show. An invitation to the smoker of the Morris County Gardeners' Society on the eighth was read and a committee appointed to represent the home organization. J. R. D.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

A Unique Christmas Window Display.

Our illustration herewith shows how the window of John Coombs, florist, Hartford, Conn., was decorated for Christmas. A local paper thus describes the picture:

"For the holidays a woodland scene is laid, with an old grist mill and wheel grinding away as natural as life. The scene is supposed to be laid in Scotland and a verse nearby runs as follows:—

"There was a jolly miller
Once lived on the River Dee;
He wrought and sang the hale dae lang,
Sae lark mair blithe than he."

"At other times this window is piled high with rough stones and the water comes trickling down, and the real fish swim in and out among the plants. One can almost hear the brown thrush among the blooming plants singing his roundelay."

The other illustration represents the Christmas display of Mr. Coombs.

Christmas Window Decoration of John Coombs, Hartford, Conn.

Dreer's Seventieth Anniversary.

This year the well-known house of Henry A. Dreer, Inc., Philadelphia, Pa., celebrates its seventieth anniversary, and Dreer's Garden Book for 1908 contains much information concerning the development of the concern's business in all its branches, the text being accompanied with many illustrations, one of which is a photographic reproduction of the firm's first catalogue, which consisted of but two pages, issued in 1838, listing what was then a complete assortment of vegetable, flower and agricultural seeds. It is interesting to note that this list included every kind of vegetable which the house has today, with the single exception of Brussels sprouts. One hundred and twenty-three varieties of flower seeds were then offered of which eighty are still listed. Many of the names on the list are still the favorites of professional and private planters today, but they have been greatly improved by selection. Among the varieties of vegetables offered seventy years ago were the Valentine bean, large Lima bean, Drumhead cabbage, Long Orange carrot, White Spine cucumber, large purple egg plant, white, yellow, and red onion, large sugar parsnip, scarlet turnip radish, red turnip-rooted beet, and the white flat Dutch turnip.

The firm name was at first known as Hirst & Dreer; but Mr. Hirst's connection with the concern was brief, less than two years. From the first the active management of the business was in the hands of Henry A. Dreer, then 20 years old, and after the withdrawal of his partner, Mr. Dreer continued to conduct the business with unusual industry and intelligence. Henry A. Dreer died in December, 1873, and was succeeded by his son, William F. Dreer, whom he had trained in the conscientious and earnest methods which distinguished the business from its foundation.

A fact noted by the firm is that the vast increase in production and improvements in methods have wrought an amazing reduction in the price of best seeds. Varieties which were listed in the first Dreer catalogue at 12½ cents per packet may now be had for 5 cents. Bulls that cost 85 apiece a half century ago may now be probably sold for 15 cents.

Some idea of the extent of the firm's business may be gleaned from the statement that it requires a force of not less than 175 men and women to operate the various departments at all seasons of the year, and during the busy season in Spring there are seldom less than 200 employees. Of this number fifty to sixty are engaged at the store, office and warehouse in Philadelphia, the balance at the greenhouses and nurseries at Riverton, N. J. A large number of men began their business life as boys in the establishment; several have served continuously for forty years, a score or more for over twenty years, and a very large number for ten years or more.

William F. Dreer, although active in the business for forty years, is still at the helm, in the strength and vigor of middle life. He began business with his father as soon as he left school, who gave him a thorough training in all departments of the business. At the age of eighteen he spent a season with one of the largest seed growers in Germany, and a season in a famous French seed establishment in Paris. In 1892 the business was incorporated under the name of the honored founder, with William F. Dreer as president. By this move he associated with himself as directors a number of the firm's oldest employees, men whose intelligent and faithful service has aided greatly in building up the vast industry which the corporation now represents. Jacob D. Eisele, vice-president, who has risen from the ranks, having started as a boy in 1876, is in charge of the nursery department and greenhouses at Riverton, N. J. Herbert G. Tull, treasurer, has served the house for over twenty years, and is responsible for the management of the office. J. Otto Thilow, secretary, has been connected with the firm since 1881, and is in charge of the store and sundry department. George A. Strohhlein has been connected with the nursery department for over twenty-five years, and is associated with Mr. Eisele in its management. George D. Clark, who is in charge of the flower seed and bulb department, has been with the house since 1856. C. H. MacKubbin has been in charge of the vegetable and agricultural seeds for nearly ten years.

THE PRESIDENT AND HIS STAFF

The Henry A. Dreer Inc., Philadelphia, Pa.

Courtesy of the firm.

Among the new varieties of vegetables introduced by this firm are mentioned the Hanson lettuce, Dreer's Improved Pole Lima bean and the Dreer Bush Lima bean, a dwarf growing type of the former; Golden Cluster Wax Pole bean, Dreer's Perfect Forcing carrot, Dreer's Aristocrat sugar corn, Dreer's All-Heart lettuce, Dreer's Dwarf Perfection parsnip, Dreer's Electric peas, Dreer's Standard potato, Dreer's Crystal Forcing radish, Dreer's Superb tomato and many other varieties which have become standard sorts and are now extensively grown.

The development of the flower seed department of the firm has been phenomenal.

Seventy years ago the list of flower seeds comprised less than three hundred sorts; today over twelve hundred species and varieties are offered in the thirty-six pages of the current year's catalogue. Many of the strains of flower seeds raised by Henry A. Dreer have a world-wide reputation, notably the double fringed petunias, which have been a specialty with the concern for over half a century, every seed of which is raised at the nurseries. Among other seeds which receive special attention are the mentioned asters, cinerarias, cyclamen, nasturtiums, pansies, pinks, poppies, primulas, salvias, stocks, sweet peas, verbenas, zinnias, etc. Seeds of

the various hardy perennials are, to a great extent, saved at the Riverton nurseries, over one hundred and twenty-five varieties having been saved during the season of 1907. The gathering, cleaning, etc., is done by careful men.

The growth of the bulb department of the firm has also been wonderful. Its sales of bulb stocks have increased over 300 per cent in the last ten years, over six million bulbs having been sent out in the Autumn of 1907, enough to fill a box six inches apart in a single line, to a total distance of over one hundred and fifty-eight miles, or from Philadelphia to beyond Columbus, O., or

almost from Boston to Richmond, Va. Careful tests are made annually of new varieties to ascertain whether they are worth the high price that novelties in bulbs usually command.

The best indication of the extent of the firm's trade is reflected by its catalogues. The little two-page list issued in 1878 had an edition of a few hundred; the present Garden Book contains 248 pages, replete with offerings to meet all horticultural needs. In addition there is a Midsummer list issued in June, the bulb or Autumn catalogue issued in September and various smaller lists sent to florists and market gardeners, reaching a total of nearly 300,000 copies, requiring over 150,000 pounds of paper to print them and an outlay of more than ten thousand dollars to mail them to customers in all parts of the world.

For over half a century the Dreer establishment has been foremost in the introduction of new and rare plants, either collected from their native habitats, or introductions from the world's most noted hybridizers. This branch of the business has in recent years been greatly developed and extended.

The decorative and ornamental foliage plants occupy nearly five acres of greenhouse space, and the firm has been the means of bringing many varieties of palms, araucarias, pandanus, etc., within the reach of everyone. In addition a specialty is made of stove and warm house plants, as well as of the hardier greenhouse plants, such as anthuriums, aralias, aloccasias, ardisias, crotons, caladiums, dieffenbachias, dracaenas, ixoras, marantas and hundreds of others.

Over sixty-five thousand square feet, or more than an acre and a half, with a staff of specialists in this particular line, are devoted to fern growing alone, and more than two million plants are distributed every season.

In dahlias the sales in 1895, twelve years ago, amounted to less than 8,000 roots; to-day over forty acres are devoted to their cultivation, and over 300,000 roots are grown for one season's sales.

The canna business has also increased very extensively, and nearly a quarter million of these roots are distributed annually.

As regards hardy perennials, it is interesting to note that although fifteen years ago this department was a mere side line in the firm's business, to-day over seventy acres are devoted to the cultivation of these plants. Over two millions are sent out every season of such popular varieties as phloxes, delphiniums, tritomas, hollyhocks, iris, anemones, peonies, etc., some being grown by tens of thousands. Several years ago the firm adopted a system of growing many varieties of hardy perennials in pots, especially for Spring delivery. This does not necessarily mean that the plants have been altogether pot-grown; many are field grown, but are dug and placed in pots during the Fall and Winter months, and these plants are said to be vastly superior to plants dug directly from the field, and may be transplanted with absolute safety until late in the Spring. A large section of the perennial gardens is equipped with a system of irrigation; the water is supplied from wells by steam pumps which are run day and night when occasion demands.

The rose department is made a special feature of the greenhouse and nursery establishment, and large numbers of these plants are disposed of annually, being all field-grown.

The aquatic department has also assumed large proportions. The water lily gardens now cover about eight acres, developed from a small cement basin, 10x25 feet, supplemented with a few half-barrels, which were ample to propagate and grow all the aquatics the firm required in 1884, when they first offered this class of plants.

Of equal interest has been the development of the hardy flowering shrub department, also hardy climbers and small fruits.

An interesting page of the catalogue is formed by reproduction of a few of the gold, silver and bronze medals awarded to Messrs. Dreer for their products.

The foregoing is but a brief summary of the absorbing story concerning the growth of this long established firm.

SEND FOR SAMPLES OF OUR

"Cultural Directions"

Specially prepared for the use of your customers. These Leaflets are just the neat little factor to promote business and establish better relations between the dealer and his customer. They have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Hand one out with each sale. It will save your time, quicken and increase business, and aid you please your customer.

HARDY PLANT NOTES

Some 1908 Novelties.

Real true novelties in hardy plants have been very scarce of late years and, seemingly, appear more so this year. Thrice during the past Summer I had the privilege of seeing a few that will no doubt be found in this season's lists. In looking over European lists of the past few years, varieties of hardy asters have there appeared galore; but our landscapers and roadsides in the late Summer and Fall season give us such an endless variety of these charming starworts that it must indeed be something very startling or wonderful before anyone but an eminently hardy aster enthusiast would even deign to notice here. A foreign correspondent commented on a few remarks I recently made in these columns upon some of the larger flowering types, and while admitting their good qualities said they were not as useful for cutting as some of the smaller types. There is truth in this, but if the same correspondent could only once get out on Long Island in the eastern part of New York, in New Jersey and Pennsylvania, and see the numberless shades, varieties, natural hybrids, or variations growing wild, he would better understand why our enthusiasts here lag in regard to these small-flowered sorts. I admit all are worthy of culture where space and room permit, but American taste for the cultivation of these numberless though beautiful objects in our gardens has not yet been fostered, much less developed. Then again, one of our most prominent and popular garden writers is loudly decrying their use, saying they are too small and miffy. This, I think, is very much to be regretted. Any improvement, such as is to be found in that beautifully improved form of our New England aster, Lil Fardel, will at present be appreciated, and the greater the range of color and the size of the flower, coupled with late flowering qualities—say, October and November—the greater will be the appreciation. Aster n. a. Lil Fardel gives a very large rose-colored flower; is a good bloomer and a strong grower. Perhaps the most conspicuous and best of all this year's introductions will be Lupinus polyphyllus Moerheimi. This is, indeed, as regards uniqueness and combination of color, considered a charming introduction, for a more lovely thing in bloom I never saw in this useful class of plants. The plants were large, well grown, beautifully branched specimens; each branch was carrying a spike of bloom, as near as I could judge, about one foot in length, and the color seemed to be one of those pretty combination shades of light and dark pink, softening to white, that tax the imagination to describe accurately. The whole plant was about 2½ feet in height, and for symmetry and neatness in foliage, habit and bloom I consider it a sterling novelty. The plants were beautifully clothed with abundant foliage and in the zenith of their perfection during the middle of June when I saw them, and were an acquisition of which any one would feel justly proud. For those who can successfully cultivate lupinus this is a gem of high mark, but I am doubtful if it can be really considered a hardy perennial. I always think these plants do better treated as hardy annuals or biennials, for if sown very early in the season, in a good sandy soil, around Philadelphia they have invariably flowered with me the first season, with the exception of L. perennis. This latter seems to grow abundantly as a wildling in the lightest and poorest of soils. I have seen it both in New York and in New Jersey, growing and flowering on sandy knolls by the roadsides, while in our rich, moist garden soils it invariably suffers from moisture. L. Moerheimi was introduced to cultivation by R. Ruys of Moerheim, Dedemsvaart, Holland, to whom we are indebted for so many beautiful things in hardy plants of late years, as for instance, Campanula per. Moerheimi, Arabis Moerheimi, etc., the former of which has had such a tremendous sale here, thus proving its sterling worth. Kniphofia or Tritoma erecta, the erect flowering torch lily or flame flower, is a peculiarly interesting plant, quite a complete reversal of natural methods of placing the flower tubes on the stem having taken place in some wonderful, un-

countable, freakish way; nature instead of gracefully placing the blooms on the flowering stems in the usual drooping manner has, curiously enough, placed them erect, or upright, giving the whole plant a very distinct, odd and curious appearance, thereby enabling one to see right into the flower. The flower stems are strong, erect, and the color a deep orange scarlet. The plant seemed to be very free and had all the appearance of being a continuous bloomer. In habit and growth it seemed to me to be stronger than that old, ever popular favorite, Tritoma Pfitzeri, which is a very creditable recommendation. I also saw an improved form of Rudbeckia laciniata fl. pl. called Rays of Gold. To a casual observer this would almost appear to be identical with the very widely distributed R. Golden Glow. Well, in habit and form of growth it is, and in apparently every other detail even to the color of the flowers; but it is in this last detail where the difference exists. In R. Golden Glow the petalage

we have indeed a conspicuous plant. The latter is a little more tender and in hot situations is somewhat apt to burn, but both are neat, distinct plants and worthy of any care. I see Aquilegia Helene is still held as a novelty, and to lovers of choice varieties who find it tedious to grow. A Stuarti or A. glandulosa will be found a gem, as the plants from the first are more vigorous, free and easy in their habit of growth. The flowers also show the same vigor, but not to coarseness. It is very free flowering and seemingly so far adapts itself much better to our climate and methods of cultivation than any other varieties throwing the same colored flowers. Phlox amena variegata is also out as a novelty. I had the pleasure of seeing this sport some eight or nine years ago as a small carpet plant of slow growth, with golden and green foliage. It is somewhat attractive, but apt to run out in our climate. Where room can be spared Senecio

A FEW GOOD THINGS YOU WANT

TIMELY SUGGESTIONS

We offer a nice lot of Van der Crayssen Azaleas at 75c, \$1.00 and \$1.25 each. Simon Mardner and Verycemona at \$1.00, \$1.25 and \$1.50. HYDRANGEAS, for late flowering January delivery fine plants 7 in. in pots and \$1.25, 8 in. in pots and \$1.50, 9 in. in pots and \$2.75, February delivery 50c higher. CUTTINGS and 2 in. pots of soft wooded stock at exceptional prices for quality. Write for our circular. We grow 75,000 FERNS annually and become ROSES. Ask for our lists, we can interest you. GEORGE A. KUHL Wholesale Grower PEKIN, ILL.

CARNATION GROWERS

OUR issue for Saturday, February 1, 1908, will contain a full report of the meeting of The American Carnation Society, which is to be held in Washington, D. C., on January 28, 29 and 30, and carnation growers will find in that issue a most timely opportunity to place advertisements of either novelties or standard varieties that they may have to offer. Advertising copy should reach us not later than noon on Wednesday, January 29, or as much earlier as possible. THE FLORISTS' EXCHANGE, 2-8 Duane St., N. Y.

of the flowers is broad, flat, wavy, loose and somewhat open, and it is not what is regarded as a very large double flower. In the new variety, however, the bloom is distinctly filled with narrow petalage, rounded and full to the center, assuming a globular or spherical form which, on the whole, makes it a very chaste, refined flower—a superior and very decided improvement on the old existing form. But, I think, without a doubt, a more beautiful thing, if such is possible, will be found in the improved form of Rudbeckia nitida, called Autumn Sun. We have had Autumn Glory and several others, but nothing that can compare with this last comer. I always had a great leaning toward R. nitida and its progeny, with their dark shining green and glaucous foliage and their numerous pale, abundantly produced lemon-colored flowers in early Fall. By late division and late transplanting I was able to secure larger, later and better flowers. To some it is a rather coarse plant, but by practicing the above methods this drawback is somewhat obviated, and the plants do not grow quite so tall. This fact will be more appreciated in this new improved form and the apparently more numerous, broader and deeper ray petals of the flowers, which are produced in such abundance. Altogether this is a very striking plant and an admirable acquisition to any collection. There are also several new rises of various types. I have heard of one with broad foliage, said to be a cross between Iris pallida dalmatica and Iris ger. Maori King, containing the most excellent qualities of both parent varieties. There is novelty and much variety in both the new variegated forms of I. pallida fol. var. and Iris pallida fol. argentea var. The former is one of the most conspicuous of the variegated plants I know of, and when we add to the symmetry and neatness of its foliage and combine with its very beautiful variegation the soft large pale lavender flowers

divorina will be found a useful and interesting plant, with enormous round leaves, almost subtropical in effect, and producing dense panicles of small, golden yellow flowers. The white Stokes' aster, Stokesia cyanca alba, is not yet over-abundant, but is well worth a trial. No doubt many other new things will come forward as the season opens. HERBERT GREENSMITH, Syracuse, N. Y. Henry Morris is about to make a complete change from hot water to steam in his greenhouses at Elmwood. A powerful steam boiler was in position and almost ready for the change. Mr. Morris will have a few good hot water boilers to dispose of. The two Quinlan stores did a splendid Christmas trade. A large amount of reasonable stock was on hand. English holly, well buried in tubs, Gloire de Lorraine begonias, poinsettias, cacti, as well as decorative plants and bulbous stock. Mr. Quinlan was on a business trip to Oklahoma. L. E. Marquisse had a fine display of carnations for the holidays. Two large houses are devoted to his new white, the Marchioness. The beds were literally covered with handsome flowers. L. Mcneilly & Sons report a satisfactory Christmas business. They grow violets successfully. G. Bartholome has a handsome new range near his old stand in front of Woodlawn Cemetery. Peter Kay, the cemetery superintendent, has erected a few nice houses for cut flower growing in front of the cemetery. Bard & Davis report a good Christmas trade. Quite a fine display of holiday plants made their greenhouses attractive. J. M.

GROWERS

Start the New Year with Clean Stock, Free from Insect Pests

TO-BAK-INE PRODUCTS kill insects, do not harm or discolor the most delicate bloom and give more insect destroying value than all others. Let us tell you how to "Kill the Bugs" and do it effectively and economically.

WITTBOLD WATERING SYSTEM. If you knew what it was, what a time saver, and how much more efficiently and evenly you can water your stock, you would investigate its merits and be as quick to install it as you would be slow in going back to the old watering-can method of thirty years ago. It is as far in advance of the hose as that is in advance of the watering-can. We should be glad to send you a booklet on the system and give you information that will be of value.

CEMENT BENCH CONSTRUCTION. We have the only practical device for Cement Bench Construction ever invented. By the use of our device and directions, an everlasting bench can be constructed at a saving of 25% over wood. It will pay you to send for full description and information regarding this construction, and to make your plans to install permanent benches in your houses.

Write to-day for these booklets and our complete catalogue of growers' supplies.

Washington, D. C.

Club Meeting.

The Florists' Club met on the night of January 8. President Peter Bisset occupied the chair and during the course of the evening gave the members an interesting talk on his recent trip to Porto Rico. Mr. Bisset's health is greatly improved. Suitable resolutions were drawn and unanimously adopted on the sad death of John Clark and family in Boston.

January 29 was appointed carnation day and it is planned to give away 25,000 of these flowers that day. Much interest was manifested in the coming meeting of the Carnation Society and it was agreed to make an effort to have the cavalry at Fort Myer give a special exhibition of their far famed horsemanship to help the cause, and help entertain the visitors. There will also be a banquet in their honor on January 30. All carnation growers are urged to contribute flowers to this show.

Mr. Byrnes, superintendent of the Department of Agriculture greenhouses, had on exhibition two dozen very promising seedling carnations, which attracted much attention. J. L. C.

American Carnation Society.

Variety Registered.

PRESIDENT SELWY, H. W. Field, Northampton, Mass., registers President Selwye, a pure white seedling from Mrs. Thos. W. Lawson and Queen. AMBRI, M. Herr, Lancaster, Pa.

BOSTON, MASS. The meeting of the Gardeners and Florists' Club on Tuesday the 21st inst. promises to be of unusual interest. It will be ladies' night, and a very attractive program has been gotten up for the occasion. J. W. D.

New Carnation

DEFIANCE

Brilliant Scarlet

There are seven reasons why you should grow DEFIANCE and they are:

- 1st. It is by far the best color ever seen in a scarlet Carnation; it is the true velvety scarlet and not red; it will average 3 inches in diameter throughout the season.
- 2nd. It is unexcelled for productiveness by any Carnation in commerce to-day.
- 3rd. It is a clean and upright grower, producing an abundance of high grade flowers without any special treatment.
- 4th. It is in perfect health, and not subject to rust or any other disease, which is very prevalent among scarlet varieties.

- 5th. It is of perfect form; blooms are very symmetrical, center nicely built up and very full, but not so as to appear crowded; stems are very stiff and wiry, holding the flowers perfectly erect.
- 6th. It is a scarlet for the entire season; it comes into crop in October and continues through the entire season; it does not lose its color in bright sunlight, in fact, it improves in bright sun when other reds fade.
- 7th. It is the only scarlet to-day, and by growing DEFIANCE you will be satisfied, as it has no faults, is full of vigor and will do the work where other scarlets fail.

Strong, well-rooted cuttings, every one guaranteed, \$12.00 per 100, \$100.00 per 1,000

VICTORIA

NEW SEEDLING, crossed by Lawson and Harry Fenn, the color of Lawson and the long stem of Harry Fenn; it is more prolific than either. Lawson is past. Victoria is better than Lawson ever was, and gave us last winter from 20 to 25 per cent. more blooms each month. It is very healthy and a nice grower. I have two houses of it, and it is a sight to see the buds and blooms. It brings more money in the market than Lawson. Read below what J. A. Buddlong & Sons Company of Auburn, R. I., say of it. They are growing it this winter. J. A. Buddlong & Sons Company are one of the largest market gardeners in New England, also the largest rose and carnation growers in Rhode Island.

have made fine plants and we think now will produce as many flowers, if not more, than any carnation we ever grew. The stems are stiff and good length. The flower is also a good keeper.
We have sold these flowers in several instances to some of our best trade in Boston, who thought they were a long-stemmed Lawson.

December 19, 1907.
Mr. J. H. Cushing, Quindnick, R. I.

Up to date, we have cut 4768 flowers from the 1175 plants, and there are as many buds in sight to-day as there have been any time since we started to cut. In other words, the cut has been very uniform and looks as if it would continue so throughout the winter.
We do not think that you will make any mistake by putting this carnation on the market.
Yours truly,
THE J. A. BUDDLONG & SONS CO.

Dear Sir: We have 1175 plants of your new seedling Victoria carnation which we planted in house the last of July. They

Price of Victoria rooted cuttings, \$75.00 per 1000; \$8.00 per 100; 250 at 1000 rate.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business this week held up fairly well until Tuesday morning; on that day there seemed to be lessening of the demand, and prices had to be made somewhat easier in order to make sales. Compared with other years the prices do not look very well; still the business cannot be said to be quite as bad as it was for a few weeks immediately preceding the holidays. Roses of all kinds are not what might be termed plentiful; and the shorter grades are much easier to dispose of than are the special and fancy flowers. Carnations are holding considerably; still the quantities coming in are not such as to make necessary any very severe cuts in values. Orchids, particularly cattleyas and cypripediums, are quite plentiful, and as regards the latter decided reductions have had to be made in order to effect clearances.

Lily of the valley is extremely plentiful just now, as also is Paper White narcissus, and no fixed prices obtain for either of these. Some yellow Trumpet narcissus are coming in for which \$3 per 100 seems to be about the ruling figure. Gardenias are seen in every store almost, and it is only the long-stemmed blooms that are bringing satisfactory figures. Violets are selling at anywhere from 50c. to 75c. per 100, and there are always plenty of them to meet all demands. Callas do not seem to get plentiful this Winter; consequently they hold fairly firm at \$1.50 per dozen. Tulips, in both red and yellow, are coming in, and bring anywhere from \$2 to \$3 per 100. Roman hyacinths are not nearly so abundant as are Paper White narcissus; consequently they are bringing fairly good prices. Sweet peas are not very plentiful as yet, though there is a regular supply.

CHICAGO.—The market in this city has as usual taken on an after holiday aspect, and though the shipping has been fairly good the local demand has been very close to the dormant line, with the exception of several heavy funeral orders caused by the recent unseasonable weather.

BOSTON.—Business has been changeable this week and many days flowers have been hard to move. Prices accordingly have dropped. American Beauty roses still maintain good values, the highest grades bring \$6 per dozen, while other fine grades fetch \$1.50 and \$3 per dozen. Roses generally bring from \$5 to \$10 per 100, while fancy grades of Richmond, Killarney, etc., realize \$2 and \$3 per dozen. Carnations are plentiful at \$2 and \$3 for ordinary and \$4 and \$5 for the best grades. Lilies are very abundant at from \$2 to \$4. Lily of the valley brings from \$2 to \$4. Violets are druggary at from 35c. up to 75c. Sweet peas are good at \$1 and \$1.50. Paper White and yellow narcissus sell slowly at \$1 and \$1.50.

ST. LOUIS.—There was quite a little activity displayed in retail circles the past week—quite a few large weddings and many social affairs which used up a considerable quantity of stock in almost everything in the market. A fairly good New Year's business is reported about town, in some cases quite large. Nearly all the up-to-date clubs and hotels had decorations of plants and cut flowers for this occasion. There has been a generally increasing cut in all lines, and prices since the holidays are almost cut in half. The demand, the wholesalers say, has been very good, but the supply is greater than the call. We notice the stock at the four wholesale houses is large, and quality of the best.

Carnations are down to \$3 and \$4 per 100 for fancy grades; \$1.50 to \$2 for next choice. Extra fine Enchantress, Mrs. T. W. Lawson, White Perfection and Cardinal are among the best. American Beauty, in long, fancy grades, bring \$1 to \$1 per dozen; others according to length of stem. Most of the short ones

are bull-headed. California violets are very plentiful, and are selling at 50c. per 100 for the best. Bulbous stock, as is usual at this time of the year, is very plentiful and down in price on Roman hyacinths and Paper White narcissus. All greens are in good demand, especially smilax and galax leaves.

INDIANAPOLIS.—January, last season, embodied a vast amount of business. To equal that volume or surpass it will take greater strides than those of the past week. Funeral work has been plentiful, but decorations and counter trade do not materialize in quantities. The quotations on all lines of flowers are lower than at the same period last year. This is partly attributable to mild weather and much sunshine. Select roses, such as Bride, Bridesmaid and Richmond, are wholesaling at \$8 to \$10 per 100. The best American Beauty, stems 26 to 42 inches, at \$3.50 to \$4 per dozen, are certainly an innovation; short stem stock sells as low as \$5 per 100. Killarney is going well at \$10 to \$12 per 100. Fancy carnations have declined to \$3 and \$4 per 100; medium grades are not plentiful at \$2 to \$2.50 per 100; 75c. and \$1 per dozen is the storemen's price for them. Home-grown and Eastern violets are more abundant than necessary at 75c. to \$1 per 100. Well-grown sweet peas always find ready buyers at \$1.50 per 100.

Late poinsettias keep better and are more satisfactory than the earlier ones. Prices remain about the same—\$2 to \$3 per dozen. Bulbous stock, such as jonquils, Paper White narcissus, Lily of the valley and Roman hyacinths, are moved with difficulty at \$3.50 to \$4 per 100.

Patrons are always alert for well-grown pot plants. Top notch prices are obtainable by the retailers, but the supply of stock is limited.

Tomlinson Hall market reports a brisk business, both in the wholesale and retail departments; those wishing to do so have little difficulty in wholesaling their entire output.

GRAND RAPIDS, MICH.—Christmas trade, contrary to predictions based on the financial flurry, the quietness preceding the holidays and the gradual accumulation of stocks, was of old-time extent, most satisfactory to all concerned. The weather was bright, and just cold enough, with snow on the ground to make it ideal Christmas weather. Carnations, except red, were plentiful, but cleaned up close. Roses were just equal to demand except, of course, red and American Beauty. It must be remembered that roses were in full crop; this is the first holiday season in years when the supply equalled the demand. There was a large call for flowering plants, palms and ferns. Large numbers of made-up baskets were readily disposed of and more could have been sold. The sizes most popular were priced at \$2 and \$3 each, that being what most people wanted to pay, although lots of plants were sold for \$5 and over. On the other hand, cheap plants were not much in favor. The only feature about the plant trade was the return of palms and ferns to popular favor; contrary to previous seasons they were eagerly sought after this year. Poinsettias were too plentiful, did not take as well as in former years, and lots of them were left over; but the latter were of the poorer, cheaper sizes.

Paper White narcissus and Roman hyacinths sold well, both as cut flowers and in pans.

The Christmas shipping trade was good; although the individual orders were not as large as last year there were more of them. Good prices, easily obtainable, were asked for all flowers, with hardly a complaint. Roses realize \$2 to \$4; carnations, \$1 to \$1.25; American Beauty, \$2.50 to \$3; violets, 25c.; Roman hyacinths and Paper White narcissus, 75c.; lilies, \$2.00 per dozen. It is predicted that 1908 will be the

banner year in the trade, in spite of the money panic, although it cannot be said but that the financial trouble up to Christmas caused considerable loss.

KALAMAZOO, MICH.—Business during the interval between Christmas and New Year's held up exceedingly well and much satisfaction is expressed by the retail as well as wholesale trade. Prices were shaded somewhat for New Year's, but as the stock on hand did not exceed the demand, satisfactory figures were realized. The outlook for a fairly good trade for the next week or two is said to be very favorable by the retailers generally, and as the shops and factories here are commencing to resume operations, things certainly ought to continue to show improvement.

The past year's business on the whole may be said to be good notwithstanding the panicky times experienced the last two months. What the present year will bring to the trade is hard to say, and while we hope to continue to improve business conditions it must be remembered this next presidential election will exercise considerable influence in many ways and have a potent effect on the next few years' business. It will be advisable, said a successful man of business the other day, to exercise caution in buying and extending operations, and to be "extremely cautious concerning the giving of credits without proper investigation." The opinion seems to me to be worthy of the consideration of florists as well as others, so I pass it on hoping your readers will give it consideration.

I trust The Florists' Exchange and its readers will enjoy a prosperous New Year.

DETROIT, MICH.—The way the old year wound up was truly a great finish and most of us awaited the New Year in the shop. At present we find plenty of time to make out bills and post up the books, silently but not less fervently wishing that collections may be as easy as the booking of orders was.

Our Christmas experiences should awaken an especial amount of gratitude in every honest merchant's, and more so in every honest florist's heart, for we all know that a financial flurry of no mean proportion swept over the Eastern and Middle States, and we also know that our product is not an article of necessity but of luxury. As producers of articles of luxury we must expect a falling off in consumption at the least unbusiness in business and financial circles. That no such curtailment has taken place proves clearly that the steady advancement in civilization is slowly but surely bringing our products into the list of necessities. That the florists themselves, by introducing new varieties and new ways of using them have done the lion's share in bringing about this condition is unquestionable. To receive such a strong proof of success should create special reflection and encouragement to still further progress.

FRANK DANZER.

PROVIDENCE, R. I.—The Christmas trade was all that could be desired; everything sold out clean, except evergreen roping, wreaths, crosses, and trees. This was owing to the extra supply. There was just double the quantity in the market here. Boxwood is certainly the leading article to make an evergreen design. All kinds of flowers and flowering plants sold well. There was a good demand for foliage plants also, such as Boston fern of the different varieties, rubbers, palms, etc. Bride, Bridesmaid, Golden Gate and Killarney roses, first class stock, brought \$15 to \$20 per 100 wholesale; violets, \$1 to \$1.25 per 100; carnations, \$5 to \$10 per 100 according to variety and quality. Paper White narcissus and jonquils, \$1; lily of the valley, \$4 to \$5 per 100. Holly sold well, also mistletoe.

ST. JOSEPH, MO.—With ideal weather trade moved pleasantly and with comparatively little labor. There was a brisk demand for plants, especially azaleas, poinsettias, begonias, etc., several days before Christmas. In cut flowers Richmond appeared to take the lead in regard, with Killarney a close second; other kinds also sold well. In carnations

Victory, White Perfection and Enchantress were most called for. Holly was pretty well cleaned up by Tuesday evening. Altogether the volume of trade was increased fully twenty-five per cent. over that of any former year, with a brisker New Year trade than we have had for some years.

TOLEDO, O.—The holiday business here was up to the average; some say it was better and others it was not so good as last year. Many working hands had been without work for several weeks and the florists in their locality felt it, while those in the better sections of the city fared better. Flowers and flowering plants available were well cleaned up except poinsettias which did not move till after Christmas. Carnations and roses are now becoming more plentiful and the quality is better. The only bulbous stock so far on the market is Paper White narcissus and white Roman hyacinths; while the first move well, the latter got slowly.

NEW BEDFORD, MASS.—The cut flower trade is rather dull at present. The supply of flowers is about equal to the demand. Carnations are now selling for 60c. and 75c. per dozen retail. Violets are going a little slow; they retail at \$1.50 per hundred. Roses of good quality can be had for \$1.50 and \$2 per dozen retail. Some tulips are coming in; they sell at 60c. per dozen. A good supply of Paper White narcissus is arriving; these sell for 50c. per dozen. Funeral work is using up lots of stock.

H. A. Jahn had an enormous supply of carnations for the holidays, his cut for one day being 5,000 blooms. He has got a good thing in his new white, The Lloyd, and is making heavy shipments of cuttings of this variety.

White Brothers, florists near Lynn, were so impressed with this variety on seeing it that they ordered 750 cuttings. Mr. Jahn has a crimson which he will put on the market next year; this is a beauty. He has quite a novel way of advertising the variety; with each large order for Lloyd, he is sending free a dozen cuttings of this crimson.

FIRMS WHO ARE BUILDING.

WINONA, ILL.—Metzgar has just completed a new greenhouse.

RUTLAND, VT.—The Baker Seed House is erecting a new greenhouse.

SOUTH PORTLAND, ME.—J. W. Minott & Son will erect a new greenhouse, 150x45 feet.

WOBURN, MASS.—Adam Foster is building two large greenhouses on the property he purchased a short time ago.

PORT ATCHISON, WIS.—A. L. Merriam is adding to the greenhouse plant he purchased last Fall from M. C. Prochaska.

CHANGES IN BUSINESS.

RED DEER, ALBERTA.—J. Slade has taken over the greenhouses and conservatory from A. B. Nash.

RICHMOND, VA.—Post Brothers, bulb growers, formerly of Ettricks, W. Va., are now located at North Side, Highland Park, this city.

WASHINGTON, C. H., OHIO.—The address of Poole & Parliant is now 270 Washington avenue, this town. The firm is desirous of receiving trade catalogues, which should be sent to the address given.

NEW YORK.—Mackintosh has been incorporated to do a nursery business, capital, \$2,500. Directors: Elizabeth Mackintosh, 11 Perry street; Joseph Malone, 531 East Forty-second street; C. A. Flynn, 63 West Ninety-sixth street, New York.

BUFFALO, N. Y.—The Buffalo Cut Flower Company has been incorporated to deal in cut flowers and potted plants; capital, \$25,000. The incorporators are J. H. Gould, L. H. Gould and G. R. Sheldon, Middleport, N. Y.

ADRIAN, MICH.—The firm of Elmer D. Smith & Company has succeeded Nathan Smith & Son. The new firm will discontinue many lines formerly handled, and will devote their entire time and energy to the development and improvement of asters and chrysanthemums.

Trade Notes.
Always a calm after a storm, and while there is, here and there, a breeze that ruffles the general run of business, on the whole since January 1 "quiet" would but express the situation. When Mayor Mackbreit, the Board of Public Service, Council and other dignitaries took their seats at the City Hall on New Year's day, one could easily imagine that he was visiting a flower show. Horse shoes, scrolls, baskets, American Beauty bunches, Loyal Legion designs and all other conceivable forms were there. Tables and desks, as well as the floors, were piled high with beautiful flowers, and the work was very evenly divided, so that all got their share.
J. W. Rodgers was the only Democrat that held over, and he retains his place as superintendent of parks.
Walter Mott was a caller Thursday, representing A. T. Boddington of New York.
Several of our retail florists were in the police court January 3 to prosecute a young fellow who would order a ten or fifteen dollar design or bunch of flowers, then get the florists to make up a box of flowers for a dollar or so, and when he got his hands on the flowers, would tell the florists he would pay them in the morning when he paid for the design. The case was postponed for ten days.
Wm. D. Gear, florist at Fifteenth and Vine streets, has been laid up with a carbuncle on his back, since December 16; his suffering has been very severe. He expects to get back to business in a few days.
O. E. Critchell has also been nursing a couple of Job's comfortors.
Paul and Henry Daillodonze of Flatbush, Brooklyn, N. Y., were callers January 6. E. G. GILLET.

Washington, D. C.
Trade Notes.
The holiday rush is over and so far as can be learned there is no dissatisfaction as to results. New Year's Day trade was up to the average, and more pleasing still is the fact that the usual cessation of business after a holiday has not occurred; every one is busy, more so than usual at this season. The only hindrance is the scarcity of flowers; home grown stock is at a premium, a rather strange condition, considering the unusually fine weather. The demand for shipped flowers has been heavy. The scarcity has kept prices equal to those of the holidays, except values on violets, which have dropped.
Gude Brothers Company had several large decorations during the week, one of which required 250 American Beauty roses. The death of Rev. Dr. Stafford created a large demand for funeral work from the various stores.
Peter Bisset has returned from his trip to Porto Rico much improved in health, the news of which will be very gratifying to his many friends.

News Notes.
 A recent call at Richard F. Gloede's farm, where he always has surprises, we found one last week in the form of a boy, born the 8th day of November last.
 Among the beautiful and sentimental offerings which accompanied the body of the late R. H. Warder to Cincinnati was a handsome design from J. C. Vaughan.
 A. B. Cutting, Toronto, Canada, who was married on January 1 in this city to Miss Kitajevett, is well known and popular in the profession. He is editor of the Canadian Florist, editor of the Canadian Horticulturist, agricultural editor of the Toronto Mail and Empire, horticultural editor of the Canadian Dairyman, and secretary-treasurer of the Co-operative Fruit Growers of Ontario. His friends in this section, as elsewhere, wish Mr. and Mrs. Cutting much happiness.
 The friends of George Asmus in this city are much pleased to hear of his appointment by President Traendly as a director of the S. A. F. O. H.
 Fritz Bahr, Highland Park, is on a visit to Cuba for the benefit of his health.
 With the closing of the books of the J. B. Deamud Company in 1907, the business was found to be far in advance of any previous years, with satisfactory prospects for the ensuing year.
 The E. F. Winterston Company has added to its stock a fine line of cattleyas. The glut of Christmas trees has been

The Week's News.
 The first meeting of the Chicago Club, the New York Florists' Club, will be held on Monday evening, January 13, in the club's rooms in the Murray Hill Hotel, Thirty-fourth street, near Third avenue. The installation of the newly elected officers will take place, and there will be some further discussion on the club's closer relations with the Horticultural Society of New York. These two matters should be of sufficient interest to bring out every member of the club. Among exhibits of flowers that will be shown on that night will be one of the new rose, Mrs. Jardine. This rose has been previously exhibited before the club, and has been certified by the award committee, scoring 92 points. Members who have not seen this rose should avail themselves of this opportunity.
 Charles Dards, the retail florist at Forty-fourth street and Fifth avenue, had a very elaborate floral decoration in the Madison Square concert room on Saturday, January 4.
 A. H. Langjahr, wholesale florist at 55 West Twenty-eighth street, has been confined to his home several days with a severe cold, but is again well enough to attend to business daily.
 Isaac Hendrickson of the staff of John Lewis Childs, Floral Park, N. Y., who is well known to the trade in this city, is in the Nassau Hospital, Mineola, L. I., recuperating from an operation for appendicitis, which he underwent the day after Christmas. His many friends will be glad to hear that he is well on the road to recovery.
 An important meeting of the New York and New Jersey Plant Growers' Association was held on Tuesday evening, this week.
 Alfred Tharp, son of A. J. Tharp, florist at Bedford Station, N. Y., was married at his home there on Wednesday, the 8th inst.

Alfred Zeller, florist at Flatbush, had the misfortune to lose a valuable horse a day or two after Christmas. The animal was stricken with spinal meningitis at the corner of Forty-second street and Fifth avenue and had to be shot.
 George Nicodemus, florist at Flushing avenue, Astoria, L. I., dropped dead in a saloon near his home on December 31. He was taking a farewell drink to the old year with some friends and exclaimed: "Good-bye to the old; success to the new," and suddenly faltered, his face turned pale and he staggered and fell. A doctor said later that his death was due to heart disease.
 On Wednesday, January 8, George T. Powell gave a lecture on "Agriculture as a Business and a Profession" before the American Institute, 19 and 21 West Forty-fourth street. This was one of the free lecture course.
 W. H. Lutton has completed a range of glass covering 35,000 square feet on Linden avenue, Irvington, N. J., for E. W. Pengar. The range is of iron frame construction throughout with all modern features, and represents a total investment of about \$50,000.
 The ninth annual dinner of the Tarrytown Horticultural Society will be held on Wednesday evening, January 15, at the Florence Hotel, Tarrytown, N. Y.
 The seed business with Arthur T. Roddington, 342 West Fourteenth street, is opening up very favorably. In addition to H. A. Bunyard and staff of drummers at present on the road, Mr. Roddington himself is taking a short trip in the interest of his house.
 Wm. P. Craig of Philadelphia has been in town showing the new rose Mrs. Jardine to retail dealers.
 C. W. Ward left this week for Detroit on business.

so heavy that it is reported that there are several carloads still on the track consigned to merchants who will not pay the freight.
 The mother of John Degnan, manager of the Winterston Seed Store, who has been quite ill with the grippe, is improving, though not out of danger.
 J. S. Wilson, manager of Vaughan's Western Springs greenhouses and nursery, is well pleased with the success of his holiday trade, and is now preparing to accommodate his city trade with their Easter requirements.
 W. K. W.
BLOOMINGTON, ILL.—The Phoenix Nursery Company has increased its capital stock from \$200,000 to \$300,000.
COVINGTON, KY.—The Covington Fair Association has been incorporated with a capital of \$5,000, to establish and maintain an association for horticultural and agricultural purposes.
FIRES.
BRIDGETON, N. J.—On New Year's Day a fire, the origin of which is unknown, caused a loss of \$1,000 in the greenhouses of James Dennington.
COUNCIL BLUFFS, IA.—On the morning of December 31 last, fire in the establishment of the F. W. Meneray Crescent Nursery Company started in a pile of excelsior used for packing plants, causing \$25 damage.

LONDON, ONT. Christmas trade was far ahead of what we expected; the sales were better than in previous years and higher prices were obtained. Carnations sold at \$1 to \$2; roses, \$2 to \$1; Roman hyacinths and Paper White narcissus, 50c. to 75c. per dozen; violets and sweet peas, 75c. per 25. Since the holiday trade has been very good, there being quite a number of wedding orders and several for balls and parties.

News Notes.

The inaugural meeting of the Massachusetts Horticultural Society was held on Saturday and was fairly well attended. President Weld in his address strongly advocated the planting of timber trees in the waste lands of the State. Reports from the various committees of the society showed that everything was in a flourishing condition; especially was this shown in the report of J. K. M. L. Farquhar, chairman of the exhibition committee, when he said that the exhibitions during the year had been a long way ahead of any year since the society had been in its present location. He advocated the weekly Summer shows, mentioning the high standard of the exhibits the past season. The society has lost twenty-five members through death during the past year, some of the best known having been Geo. F. Fabyan, O. B. Hadwen, Edgar Sanders, George E. Davenport, W. W. Edgar and John Clark.

W. A. Riggs exhibited a fine plant of *Mochlosma riparia* at Horticultural Hall on Saturday and was awarded a first-class certificate for the same.

Eber Holmes of the Montrose Greenhouses has been quite sick with the gripe, as well as other members of his family, but we are glad to hear that latest reports indicate a speedy recovery. James Evans, porter in the Park street flower market, was remembered on Christmas by the members of the craft by a collection amounting to \$10.

Peire Brothers of Waltham expect to have their new auto-truck, which they have had built especially to carry plants and flowers into the city, in operation in a few days.

Among visitors the past week were Messrs. Sanders and Melstrom of St. Albans and J. H. Rockman, representing several Holland firms.

W. H. Elliott has now over 1,000 feet of his bigger greenhouse at his New Hampshire place completed, and is still busy at work on the other section.

J. W. DUNCAN.

St. Louis.

Trade Notes.

D. Augspurger of the firm of D. W. Augspurger, Peoria, Ill., is in the city interesting the local trade in ferns and other decorative plants.

John Mather, a Corleua (Texas) florist, has been in the city since New Year. Mr. Mather is of the firm of Jacoby & Mather, and reports that his firm will build a new range of houses this coming Summer.

J. E. O'Neil, who represents Vaughan's Seed Store, Chicago, has been here the past ten days. He reports a good run of trade. He left Friday night for the West.

Park Commissioner Philip Scanlon was out of the city the past week on a vacation after a hard season's work for the Park Department. In his absence Superintendent George Ostertag looked after the duties of the commissioner. The new Yeatman Park and the French

Market square are progressing nicely. The department has planted 22,000 bulbs in the different parks this Fall.

President W. C. Young was laid up with a bad case of gripe the past week, but reports that he will be on hand to preside at the Florists' Club meeting this week, Thursday afternoon.

There were quite a few large New Year's decorations. Among the largest were those at the Marquette Hotel and Faust's Cafe by Ostertag Brothers, and the new Raquet Club on King's Highway by the Ellison Floral Company. Those at the Jefferson, Planters and Southern Hotels were also very large and attractive.

Arthur Ellison returned to Chicago Saturday night to report at Vaughan's Western Springs greenhouses Monday morning, where he is employed. He was home to spend the holidays with his parents.

The St. Louis Seed Company report that they disposed of a great deal of extra fine holly and green this year. Goldfish and birds also had a good sale with them. They are making big preparations for a large Spring trade in seeds.

The St. Louis florists sent a large wreath in token of sympathy to the funeral of the late Alfred Plant, which took place Tuesday morning, December 31, at 10 o'clock, from his residence at Webster Groves. There was a large attendance of seedsmen and florists, and many beautiful floral designs were sent by them.

J. F. Ammann of Edwardsville, Ill., and E. W. Guy of Belleville, Ill., were in the city Tuesday attending the pottery committee meeting at Kuehn's that afternoon. The other members of this committee who also attended were W. C. Young, C. C. Sanders and Emil Schray. S. L. Bray, a practical potter, was also in attendance. This committee has prepared a report which will be read before the Florists' Club meeting Thursday afternoon, January 9, at 2 o'clock. After the meeting Mr. Bray invited the members to inspect certain sites for the location of the proposed pottery.

ST. PATRICK.

New Orleans.

News Items.

The German Gardeners' Club of New Orleans celebrated its eighteenth anniversary with a dinner at Vonderbank's on Saturday night, December 28. After dinner an enjoyable time was spent with singing and speech making.

The M. Cook's Sons have recently completed a forcing house, 48x16 feet. This firm reports doing an extra heavy business during the holidays; their stock at the present time is in fine condition.

Charles Eble makes a specialty of handling the Richmond rose, of which he is a great admirer.

Paper White narcissus and Roman hyacinths are very abundant at the present time.

The fine range of glass built by the Commissioners of City Park is completed and ready to receive plants. A recent visit to this park showed great improvements; the plantings of palms, camphors and pines are all doing well. CRESCENT CITY.

Poor Richard's Philosophy.

Poor Richard said, "When 'tis fair, be sure and take your great coat with you." Harry Papworth failed to heed the philosopher's saying, and is now wishing he had not shed his hail insurance so soon. JOHN G. ESLER.

ROSLINDALE, MASS.—The Oakdale Nursery Company has purchased a 75-acre farm at Wadsworth, Mass., where they intend to grow their stock, but will retain their present farm as headquarters. They will add to the stock at their new location iris, phlox, dahlias, and a general collection of perennials and flowering shrubs. They expect to set out from 25 to 30 acres of peaches this Spring. I. P. H.

January 11, 1908

Philadelphia.

The Week's News.

Nothing of great moment has transpired this week. Business lacks snap; there is an abundant supply of flowers of all kinds and prices are uncertain.

The Florists' Club meeting on Tuesday evening was very well attended, in spite of a pouring rain. S. S. Skidel-sky's paper on "Competition Fair and Foul" was listened to with marked attention. The committee on exhibits was very successful in bringing out many of the new roses and carnations of this year. The exhibits staged were as follows: Rose Killarney, large flowers with 40-inch stems, from Waban Rose Conservatories, Natick, Mass.

Rhea Reid, three vases of first-class flowers from E. G. Hill Company, Richmond, Ind.

Mrs. Potter Palmer, very good flowers, on 3-foot stems, from Poehmann Brothers Company, Chicago, Ill.

Wyndmoor, pink hybrid tea, from Myers & Samtman, Wyndmoor, Philadelphia.

Aurora (Souvenir du President Carnot X Bon Silence), new pink, a good commercial flower; Killarney and Miss Kate Moulton, from Adolph Farenwald, Hillside, Pa.

Mrs. Jardine from Robert Scott & Son, Sharon Hill, Pa. This was a grand vase of this popular new rose; stems 3 feet, with flowers in all stages. All showed good culture.

Of carnations Afterglow, bright pink, from R. Witterstaetter, Cincinnati, O. Winona light pink, from Fred. Dornier & Sons Company, Lafayette, Ind. Imperial, Pink Imperial, and vase of seedlings from John E. Haines, South Bethlehem, Pa. Dark pink seedling from John Kuhn, Philadelphia; a good commercial variety. White Enchantress, very good flowers on good, stiff, long stems from B. Schroeter, Detroit, Mich. This same grower also sent some blooms of a new antirrhinum, which were very good—a creamy white on long stem. These exhibits from Detroit arrived at the close of the meeting.

H. Bayersdorfer & Company continue to be very busy on orders; their customers are now replacing stocks cleaned out by holiday trade. This firm has Easter goods coming in now on steamers Marquette, Macedonia and Ethiopia, and wax goods on steamer Hamburg.

N. Neff, a retailer on Fifty-second street, was sold out by the sheriff on Saturday. He also had greenhouses at Swathmore; but these were closed out last Fall.

Benjamin Dorrance, Wilkesbarre, Pa., was a visitor on Tuesday.

DAVID RUST.

Newport, R. I.

News Notes.

Among the visitors here last week were John Beaton, representing R. & J. Farquhar & Company, Boston; and Rickards Brothers, New York. The latter gentlemen combined business with pleasure for themselves and others while here. At the annual dinner of a local club the Rickards Brothers were present on special invitation; during the evening they contributed not a little to the enjoyment of all present.

It so happens that this Winter, when we are having unusually open weather, there is not much new work outdoors to be done, but there seems to be reason for expecting good business in trees and shrubs early in the Spring. There was such a demand for large trees here for a few years that now those in search of such can find what they want only with great difficulty, if at all. Norway maples are extremely scarce and so are English lindens. There seems to have been a special run on these two kinds. The latter part of last Summer and Fall was so dry that young nursery stock did not make much more than half the growth usually made. That means that a great deal of what was expected to be marketable this Spring will not be in that condition. This is especially the case with privet running from one to two years old.

FOXBORO, MASS.—Mr. Baldwin, who went to Brockton, Mass., several years ago, has returned to his old stand here, where he has a house, 98x22 feet, devoted mostly to Cyperus alternifolius and Asparagus Sprengeri for the wholesale trade.

PHILADELPHIA, PA. LONG ISLAND CITY, N. Y. JERSEY CITY, N. J.

Bowling at Flatbush, N. Y.

Although little has been heard lately regarding the doings of the Flatbush Florists' Bowling Club, that organization is still just as alive as ever. Meeting every Thursday evening, as they have been doing for a number of years, not only for the sake of knocking down ten pins, but also for the friendly interchange of opinions and ideas, this coterie of bowlers has outlasted all other organized bowling clubs among the trade in Greater New York.

On Thursday evening, January 2, the members held their annual roll for prizes, and many handsome things were brought to light, after the games were over and the mysterious packages opened. The prize that went to E. L. Enggren, for making the highest score, was, we were given to understand by the donor, Phil. Kessler, too bulky to be brought to the meeting and would be sent by express or freight to the winner's home. It is safe to say that it was either a jar, keg or barrel of some liquid not used for spraying carnations. Paul Dailledouze captured a box of Perfectos; Henry Dailledouze, two silk scarfs; Clemens Wocker, a budding and propagating knife; Louis Schmutz, a bottle of corn juice; Alfred Zeller, a silver mounted leather cigar case; P. Riley, silk suspenders, and Phil. Kessler a silk scarf.

The scores made during the evening were as under, those of the last game being taken as the finals for the prizes.

A WORD ON COST OF GREENHOUSES

How much time do you lose, how much needless material is consequently cut up because of the inaccurate measurements of your men in erecting your wooden houses?

Did you ever stop to figure out, right down to dollars and cents, just how cheap the H. & Co. Iron Frame House is? Take the erection costs, for instance. All parts are cut and fitted at the factory and made ready to go together with practically no additional labor of fitting and fussing on the job. The frame work can be pushed along at good speed. The rafters with the purlins spacing them eight feet four inches apart, form a complete framing unit that in no way relies on any cypress member for its support—these framing units in turn support all the cypress members used.

Some of the cypress members of your house may require replacing after many years, but that iron frame will stand rigid and unaffected for generations. It then gets right down to the question of—not whether you can afford to build our Iron Frame House, but CAN YOU AFFORD NOT TO? Write us.

New York

Providence, R. I.

Trade Notes.

Monday, January 6, was inauguration day for all our City Fathers. An unusual number of floral tokens graced the occasion; over one hundred in all including an automobile of flowers, a fire engine, large standing horseshoe, immense baskets and bouquets of roses, violets, carnations. It was a very busy day for the florists here.

The many friends of James B. Canning were after him to run for the office of police commissioner, and undoubtedly Mr. Canning would have got the appointment had he allowed his name to be used. Mr. Canning had two reasons for declining; first, his florist business occupies all his time; second, a very dear friend of his was aspiring to the office and Mr. Canning was working for him. His man was appointed.

Charles Johnston is about to start for Sulphur Springs in West Virginia to spend the Winter.

The many friends of A. M. Rennie are pleased to see him about again. After being so seriously ill for the past three months Mr. Rennie has fully recovered and expects to move to New York City very soon.

John F. Wood is looking for a new location, as his lease of the present one has expired.

John Hart is now permanently employed by Johnston Brothers.

Mrs. T. J. Johnston has been dangerously ill the past three weeks from the grippe. She is improving.

Edward Brooks, manager for Mrs. T. J. Johnston, has been very ill with the grippe for the past ten days, but has stuck to business all the time.

George A. Johnston has been confined to the house for the past month with rheumatism. G. A. J.

Utica, N. Y.

The firm of Spencer & Martin has been dissolved, Mr. Spencer retiring. Henry G. Martin will conduct the business as before. At the time of your correspondent's visit Mr. Spencer was in New York City.

A. & J. Williams have a nice business on Mohawk street, close to the cemetery. Besides growing a general line of plants and cut flowers, these young men operate a small factory for wire designs for florists' use. They issue a neat catalogue and have a good business in this line in the city as well as nearby towns.

Wm. Herment & Son have just completed a new house, 40x75 feet for carnations. For the present season considerable quantities of sweet peas are grown. The place is at Doerfield only a few minutes' ride from Utica. Mr. Herment has been on the same place for the past fifty years, first starting as a market gardener. By years of industry he has now built up a fine trade and combines the growth of plants and cut flowers with the original business.

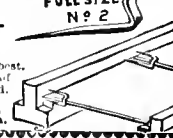

F. J. Baker was recently elected president of the City Council. Mr. Baker wears his honors well. Christmas trade was at its height and lots of desirable stock was on hand.

Wm. Matthews has added a new house

GIBLIN & CO., Utica, N. Y.

for orchids to his already well appointed range. This house is devoted mainly to cattleyas. Mr. Mathews has a piece of property that contains a bed of fibrous peat. This comes in quite handy for his own use in the growth of orchids. In addition to this, however, he ships large quantities of it to various growers not so fortunately situated as himself. The beds are of great depth and the peat can be cut in blocks or squares any desired size. It is so fibrous that each piece will retain its shape as cut no matter how much it is tossed or thrown around. Mr. Mathews says the material is formed of the roots of the *Osmunda regalis*.

Mr. Bigelow had just put in a handsome icebox. It is quite an ornament to his store. No ice will be used before Summer. A zinc pipe 8 inches in diameter enters the box at the bottom and passes through the outer walls of the store. This brings the cold air from the outside right into the icebox. The current of air can be regulated by slides to suit the temperature outdoors, so as to secure the necessary low temperature desired in the box. J. M.

BERKELEY, CAL. — Through the efforts of H. A. Lilienthal, a second branch of the Juvenile Horticultural Society has been organized here.

MANSFIELD, MASS. — William Brown is confined to the house suffering from an attack of pneumonia, from which he is improving. H.

THE NEW DUNNING BOILER

The simplest, most easily cared for, most economical, most reliable and satisfactory, that was ever made for use
IN GREENHOUSES.

With the "New Dunning" you can regulate the heat in any part of the Greenhouse, and keep an even temperature all through the season, with perfect accuracy, and with the least fuel and work.

It is made of fine steel (not cast iron) and will never crack.

It has no packed, screwed or pushed connections. All joints are plate to plate, with hot driven rivets, and absolutely tight. It has no tubes, horizontal or vertical. The cre surfaces are vertical. No oooks or firebricks for soot.

Inside boiler surface perfectly smooth. No lodgment of mud, sediment or scale.

Two fire-boxes, and thin water chamber between them. Two shells, and thin water chamber between them. Fire travels twice the length of boiler, and is all used in heating the water.

Water drains off to last drop. The "New Dunning" burns hard coal, soft coal or wood.

It lasts longer, and costs less to maintain, and does better work, than any other boiler.

It is used by U. S. Government in many departments.

How About It?

Are you going to put off the subject of building until next summer again? Why not talk it all over now and get the whole business all in good shape so that next spring when the first warm day shows up you can get right out and put up your greenhouse? No waiting, no worry, no loss of time and money. Mr. Florist, it is a common sense proposition—figure and order now, and build when you want to. We have time to give you careful, close attention now. You want the catalog first, so send for it today. Don't lock the door tonight unless you have written for it.

 Sash opening apparatus and all kinds of greenhouse structural material

No, we are not done talking yet about that **SEMI-IRON HOUSE**. You see we are determined that you shall know its strong points.

Here is the interior of one at Hatboro, Pa., for which we furnished the materials. The view is taken looking right down the center of the **GIANT ARCH**.

Two or three weeks ago we had a full page in one of the papers, fully describing the house, and among other things what the owners, Messrs. Harry M. Weiss & Sons, think of the construction. Mr. Weiss even went so far as to say he would be only too glad to give anyone writing him, his point of view.

Here is an extract from a letter of reply to one of the inquiries:

"Your postal received, asking for information concerning iron and concrete for greenhouse construction. In regard to iron for greenhouses, would say, we find by using the L. and B. iron post set in concrete, with the galvanized iron ice-clearing eave plate and sash bar clasps, make a very neat and lasting job. The 1 1/4 inch iron pipe purlin and 1 1/2 inch pipe columns set in concrete, used as a **GIANT ARCH**, is a **TOWER OF STRENGTH** and casts very little shade.

But go and see the houses and prove it for yourself. Before you go, send for circular and in our reply we will tell you easiest way to get there. Lord & Burnham Co., New York Offices, 1133 Broadway, Corner 26th St. Boston Branch, 819 Tremont Bldg. Philadelphia Branch, 1215 Filbert St.

VOL. XXV. NO. 3

NEW YORK AND CHICAGO, JANUARY 18, 1908

One Dollar Per Year

Winsor and White Enchantress

**Strong Rooted Cuttings
Now Ready for Delivery**

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere, and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. Order early, while we can promise immediate delivery, and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6.00 per 100, \$50.00 per 1,000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60.00 per 1,000.

Strong established pot-grown plants, \$9.00 per 100, \$75.00 per 1,000.

DAGATA

IN DAGATA we have what is conceded, and that without successful contradiction, to be the highest development of the Geranium at the present time, the Premier of M. Bruant's many magnificent introductions, which is recognized as the Standard in their different classes the world over. The color is a beautiful shade of mauve rose, with large white blotches at the base of each upper petal; flowers are freely produced in enormous trusses; the habit is perfect, dwarf, robust and branching. 25c. each, \$2.00 per doz., \$15.00 per 100.

CYCLOPS. This new race of Geranium is remarkable for its distinct white center, making it strikingly attractive as a pot plant. The following varieties are all of splendid habit of growth, free blooming, etc., and we are confident they will give satisfaction in every way.

MISTRAL. (Lemoine 1905.) The brightest soft crimson shading through tender rose to distinct white center. \$1.00 per doz., \$6.00 per 100.

MALRICE POTTECHER. (Lemoine 1905.) Bright scarlet shading through tender violet to white center. \$1.00 per doz., \$6.00 per 100.

JULES VASSEUR. (Bruant 1906.) Vermilion scarlet, distinct white center, slight violet shading on upper petals. 25c. each, \$2.00 per doz.

LEON BAUDRIER. (Bruant 1906.) Beautiful soft cerise shading to white center. 25c. each, \$2.00 per doz.

LEOPOLD BOUILLE. (Bruant 1906.) Bright crimson magenta, shading through violet to white center. 25c. each, \$2.00 per doz.

DR. PHILIPPE TISSIE. (Bruant 1906.) Light crimson shading through magenta to white center. 25c. each, \$2.00 per doz.

GERANIUMS. New varieties, 100 all different, 1905 and 1906 introduction, a splendid collection, for \$10.00.

GERANIUMS. Standard varieties, \$2.00 per 100 up, 2 in. pots; 1000, our selection, in 20 varieties, for \$18.50.

GERANIUMS. Ivy-leaved, good assortment, \$3.00 per 100.

Pelargoniums. 6 good varieties, \$1.50 per doz., \$6.00 per 100.

"Quality is remembered long after price is forgotten." What Quality Means.
 Quality means the best and finest types procurable in their respective classes. We go to specialists for our flower seeds. Our customers, the florist, the private gardeners demand the highest grade. We have no cheap catalogue trade. "Quality" may mean a little higher in price. "Quality" in fact, means "Quality" and we know that when you buy from us you get it, and our customers know it, too. Catalogues now in press; 40 pages. Write for one; it's free. We sell bulbs too.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
 George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Waashington, D. C., second vice-president; C. E. Kendell, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

DES MOINES, IA. Professor Jones and Professor Bowman of the State Agricultural college at Ames are making arrangements for opening an extensive seed house in this city, which will do a commercial business in agricultural seeds grown in this locality.

MARBLEHEAD, MASS. Speaking of the 1907 crop conditions in their catalogue for the present year, Messrs. J. J. H. Gregory & Son, seedsmen, say: "As a seed year, the exceptionally late Spring, dry Summer, and a Fall excessively dry in some sections and as excessively wet in others were unfavorable to the pea crop, both early and late varieties, have made some varieties of beans short, greatly reduced the squash crop, did great injury to late varieties of sweet corn, and caused more rot than usual in the Eastern-grown crop of potatoes."

BOSTON, MASS.—Most of the stores here are busy mailing their Spring catalogues and look for an early start of business.

Maurice Fuld of W. W. Rawson & Company has returned from a two weeks' trip, having visited New York, Philadelphia and Pittsburg.

G. C. Thomson has left the H. E. Fiske Seed Company, and has gone to Milwaukee, Wis., to join the staff of the well-known firm of Currie Brothers of that city.

The Haskell Implement & Seed Company is the latest addition to the trade in this city, with a store at 22 South Market street. J. W. D.

GOVERNMENT SEED DISTRIBUTION.—The distribution of the packages of vegetable seed which have been allotted to correspondents in the Southern States will begin within a few weeks. Envelopes of seed, with blank tanks attached, will be sent, in bulk, to the State statistical agents and to county correspondents, to be addressed and distributed, by packages, to their aids and assistants. Distribution to States farther north will be made later.

NEBRASKA CO-OPERATIVE SEED-TESTING LABORATORY.—Arrangements have been made by which the Bureau of Plant Industry, co-operating with the Nebraska Agricultural Experiment Station, will, about January 20, 1908, establish a seed-testing laboratory at Lincoln, Neb. This laboratory is being started in order to give quicker reports on samples of seed submitted by farmers and seedsmen in Nebraska and adjoining States where the time required for mail to go to Washington, D. C., and return frequently causes serious delay. As the facilities for work will be limited for the present, it is suggested that only those samples be sent to the Nebraska laboratory on which quick reports are desired.

All samples of seed and correspondence intended for this laboratory should be addressed: "Co-operative Seed-Testing Laboratory, Nebraska Agricultural Experiment Station, Lincoln, Neb."
 EDGAR BROWN,
 Botanist in Charge of Seed Laboratory, Washington, D. C.

IMPORTS OF SEEDS, ETC.—January 7. —H. H. Berger & Company, five cases bulbs; Godwin's Sons, 20 bags seed.

JAMES VICK'S SONS
 ROCHESTER, N. Y.
 The Leading Specialists and Largest Growers of High-Grade Asters in the World.

Two New Varieties for 1908

VICK'S IMPERIAL SUNRISE
 A novelty of extraordinary merit. Seedling from Vick's Daybreak, but distinct in form of flower, each petal being perfectly quilled. Color, delicate pink. Plant a robust grower, upright branches, each crowned with magnificent double flowers, three to five inches in diameter. Type securely fixed. Sure to be a winner. Packet 25c; two packets or more 20c. each.

VICK'S EARLY BRANCHING
 Developed from Vick's Late Branching. Flowers of this new variety can be placed on the market ten days ahead of Late Branching sorts. Plants have few branches which are free from side buds, the whole strength of the plant being given to the development of large perfectly double flowers. Long stems. Two colors, White and Rose. Packet 25c; two packets or more 20c. each.

For prices in quantity see our "Aster Book for Florists."

Thorburn & Company, 153 packages seed; F. B. Vandegriff & Company, 210 packages plants, etc. January 11 and 12.—Peter Henderson & Company, 16 bags seed; H. Frank Barrow, 24 packages seed; McHutchison & Company, 67 cases plants.

Seed Trade Notes.

Seedsmen generally are, now that the year has turned, most actively and with a very serious feeling that they may not at any reasonable rates be able to procure a stock of seeds for the coming season's requirements, taking a very close account of what seeds remain on hand from last year that are of high germination, and in perfect salable condition otherwise. Of course our largest wholesale seedsmen have the seed stock yields of their own planted acreages, and the results of their contracts with seed growing specialists as a foundation to work upon in supplying their agents, so to speak; but even those seed firms will be obliged to use the most extreme diplomacy to divide fairly with their regular customers the small seed returns from the 1907 crops that have just been harvested. To sum up in a few words the feeling of the best informed members of the seed trade, I think the following from the wholesale catalogues of one of our most conservative and reliable firms expresses very clearly how matters stand regarding the short crop items (sweet corn, etc.): "We quote tentative prices only on sweet corn. It is impossible to fix quotations firmly at present owing to lack of explicit information as to crops. We solicit orders for limited quantities only, in connection with other seeds." It may seem very strange to many seed dealers who are not always closely in touch with the actual seed growers, that even now many seed crop deliveries have not been made or even reported exactly upon by the growers. Take for example the late sorts of sweet corn; in many cases the corn itself has not yet become dry enough to shell and deliver, even under a long period of artificial heat; and to be plain, I do not think that much of it ever will dry sufficiently to sell, as it did not ripen sufficiently in the field. My earnest advice to those who need such varieties of sweet corn as Stowell's Evergreen, Country Gentleman, Burr's Mammoth, etc., is to secure their needs now; as the time will come, and in comparatively few weeks, when the present market rates of say \$6 to \$7 per bushel for the above mentioned varieties of sweet corn will have forever passed, so far as 1908 sales are concerned; and one of two things will happen—either late sorts of sweet corn will be unobtainable, or will be held at practically prohibitive values, as regards handling the same at a profit. The time to buy all needed seeds is now—not to-morrow; for when the real rush does set in steady and strong, you will see some values placed on certain popular seed stocks that will astound even the best informed seedsmen.

My unknown friend who signs himself "Statistician" has got together some very interesting matter regarding the "Cost of Seed Catalogues," but unfortunately these estimates are not as they seem. The real facts are substantially as I stated, that many small purchasers of seeds send yearly for every seed catalogue published and then buy anywhere from 50c to say \$2 worth. To prove my contention, I only yesterday asked an acquaintance, who I know uses not over \$1.50 worth of seeds a season, how many seed catalogues he had already sent for this year. He answered, "Why, all of them, of course"; and

I noticed that on those seed catalogues he already had on his desk the postage alone amounted to over thirty cents—a good beginning surely. I fully understand that one case in point proves no contention, not even mine; but all "Statistician" need do to satisfy himself that he is wrong is to ask some veteran mail order seedsmen his experience in this matter.

Allow me to say here that The Florists' Exchange very seldom "paves the way" for anyone to "jump on" any statement it may publish and it certainly does not expect "V" to make very many misstatements; but will my good readers all remember this one fact—space in The Florists' Exchange is so valuable that very often I cannot be as explicitly lengthy with my subject as would be my personal wish. You must always read between my lines, and I give even "Statistician" credit for knowing certain fundamental seed business facts.

Speaking of seed catalogues, every year the question comes up as to when is the very best date at which to distribute these catalogues to prospective customers. To my mind there can be no question regarding the policy of the largest firms in sending out their seed books as nearly as possible on January first of each year. But for those seedsmen who do purely a local business (as against a general mail order, express, and freight business done by many large firms, all over America and the world in fact), there is a very substantial argument in favor of sending out their seed lists just before their customers are ready to place their orders, which would be from one to two months after the large firms have sent out their seed books. But this is one of those broad and general questions that each one in his own individual business must decide for himself.

It is certainly a cause for joy in a year of such extreme seed crop shortages as we are now facing to have even one popular seed seller of fine quality, and low in price. I refer to nasturtiums, both in the dwarf and climbing varieties. Both these fast-selling flower seeds are very low in price this season, for the very finest mixtures. Nothing you could push as a specialty in seeds would or could give your customers more real satisfaction than some fine nasturtiums, at a low price. You can purchase the very finest mixtures of either dwarf or tall nasturtiums for not exceeding say forty cents a pound; and much less in good round lots. This matter is well worth due consideration.

I do not at all like the continued comparatively mild weather, and without snow; it has every indication of another open Winter, like last year, with the snow all falling in the month of March, a resulting late Spring, followed by another indifferent growing season. But let us hope that real snowy Winter will very soon be with us.

European Notes.

The dry spell persists and while the biting east winds are playing havoc with our help, it is all in favor of threshing operations, and growers are falling over each other to deliver their crops. The Christmas rush on railways and steamboats being over, such insignificant merchandise as seeds is at last receiving attention. Consignments that were despatched by the growers fully six weeks ago have only come to hand. In some cases the carriers have delivered goods previously reported lost, and for which they have been prepared to pay compensation. The mishap to the S. S. Cambrian has deranged all shipments now ready, as it is proposed to transfer her cargo to the succeeding steamer and leave the goods now lying at the wharf for a later date. The expense of towing this steamer back to port will doubtless involve importers in a heavy claim for general average. The value of full insurance on all goods has been amply demonstrated this season. *Verb. sap. sat.*

How far the present spell of Winter will affect our unprotected plants for 1908 crops it is not possible to say at present, but as they were all in a sapty condition, owing to the Autumn floods, they are not likely to benefit with the thermometer registering from 10 to 15 degrees of frost and a 15-mile wind direct from Siberia. There is one comfort for us and that is, we are all in the same boat; Paris, London and Vienna are equally frozen up, with no indications of a change.

Thanks to the Cunard record breaker we are now receiving on Friday afternoon the mail which formerly reached us on the Monday following, thus saving nearly a week in reply. If the American office boy could only understand that the postage fee to Europe is 5c, for letters under one ounce in weight he would save us much money and some temper. As it is reported that we are soon to have a daily service between England and America, it is to be hoped that the rates will be reduced to a two-cent basis.

EUROPEAN SEEDS.

CATALOGUES RECEIVED.

JOHANNES RAFFEN, Copenhagen, Denmark.—Price List of Seeds of Composites, Deciduous Trees and Shrubs

WILLIAM ELLIOTT & SONS, New York.—Trade Catalogue of Flower, Vegetable and Agricultural Seeds, Implements, Tools, Fertilizers, etc.

J. STECKLER SEED COMPANY, Ltd., New Orleans, La.—Illustrated Catalogue of Seeds, Plants, Supplies, etc., with an interesting list of Novelties and Specialties

HASKELL AVENUE FLORAL COMPANY, Dallas, Tex.—Illustrated Catalogue of Roses, Geraniums, Carnations, Cannas, etc., for the South. A colored representation of a plant of Meteor Rose in a pot makes an attractive cover design.

JAMES J. H. GREGORY & SON, Marblehead, Mass.—The fifty-second annual catalogue of Vegetable and Flower Seeds, Plants, etc., illustrated. As usual an interesting and instructive catalogue, replete with offerings of the newest and best.

T. R. WATSON, Plymouth, Mass.—Trade List of Deciduous Trees and Shrubs, Wild and Climbing Roses, Vines and Climbers, Evergreens, Herbaceous Perennials, Fruit Trees, Small Fruits, etc. An interesting and comprehensive catalogue.

THE GEORGE H. MELLE COMPANY, Springfield, O.—Catalogue of Seeds, Bulbs, Plants, Fruit Trees, etc. Roses form one of this firm's specialties and a large list, including novelties, is enumerated. The catalogue is profusely illustrated, colored plates of Peonies and Nasturtiums being also provided.

WEBBER & DON, New York—Catalogue of Seeds, Bulbs, Plants, Fruit Trees, Shrubs, Supplies, etc. Profusely illustrated and neatly printed. Some of this well-known firm's specialties are Cauliflower First and Best, Corn The Don, Mushroom Spawn, Tomatoes The Don and Stirling Castle, Mignonette New York Market and Leviathan, the latter figuring as the front cover illustrations. Giant-flowering Nasturtiums, etc. Also Wholesale Catalogue of Garden and Flower Seeds, Bulbs, Tools, Fertilizers and Sundries.

ST. LOUIS SEED COMPANY, St. Louis, Mo.—Illustrated Catalogue of Flower, Farm, and Garden Seeds, Bulbs, Plants, Supplies, etc. This firm is now well established in its new building where it has greater facilities for the conduct of its increasing trade. A framed portrait of each customer is presented free. Among the novelties figured as cover designs are the new Wonder Magnas Tomato and Nichols' Greenback Cucumber. "The earth owes you a living; Pure and sure seeds will make it pay you," is the firm's motto.

BRIDGEMAN'S SEED WAREHOUSE (Rickards Brothers, Proprietors), New York City.—Illustrated Catalogue of Vegetable and Flower Seeds, Bulbs, Chrysanthemums, Carnations, Roses, Hardy Perennial Plants, Supplies, etc., with a judiciously selected list of Novelties and Specialties, including Eschscholtzia Dainty Queen, tender blush or coral pink, shading deeper toward the edges, with a groundwork of delicate cream; Petunia King Alfonso, dark crimson; Cosmos Lady Lenox; Aster Giant Comet Triumph of Paris, etc. A well-printed and interesting catalogue.

JOHNSON'S GARDEN AND FARM MANUAL (Johnson Seed Company, Philadelphia).—Catalogue of Vegetable, Flower and Grass Seeds, Plants, Bulbs, Implements, Supplies, etc. The list of Novelties and Specialties, especially in the vegetable department, is particularly interesting, and includes several new Beans, Johnson's Ever-Ready Cabbage seed of which is now offered for sale for the first time; Northmount Egg Plant, Muskmelon Van Buskirk's "Scorched Rock," Onions The Ebenezer and Dark Red Beauty, and new things in Peas and Tomatoes. The catalogue is profusely illustrated.

NEW FLORAL GUIDE, 1908. (Conard & Jones Company, West Grove, Pa.)—An illustrated Catalogue of Roses and other Plants, Seeds, Bulbs, etc.

Roses and Cannas are among the principal specialties of this house, and large and exhaustive lists of these are furnished. An instructive feature of the catalogue is formed by the lists of Roses enumerated for specified purposes such as for cold and warm climates archways, arbors, trellises, clematises, etc. The new red rose Mme. Eugene Marlitt, beautifully printed in natural color, has been selected for the front cover design, and Roses Killarney and Magniferno, also in color, for the back cover. Colored plates of selections of Roses and Cannas are also provided.

J. BOLDIGIANO & SON, Baltimore, Md. Seed Catalogue for 1908. This is one of the oldest seed establishments in the United States. It has remained in the same family for 90 years, having been established by the great-grandfather of the present head of the firm in 1818. The originator of the business was an Englishman who having learned his trade in England came to this country and started in business in the city of Baltimore, when he died John Boldigiano, Sr., became head of the firm and besides conducting for many years a profitable seed business he was also treasurer of the principal stock exchange of Baltimore, a director in a number of the financial institutions, and a member of the Baltimore City Council. On the retirement from active business of John Boldigiano, Sr., Joseph A. Boldigiano, his son, became head of the concern and

20,000 Privets

Two year old, strong growing, 3 1/2 to 4 feet high, cut back once, \$25.00 per 1000. Cash.

M. H. KRUSCHKA, - ASBURY PARK, N. J.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Magnolias From Seed.

The failure to get magnolia seeds to grow, which is reported by so many nurserymen and florists, results from improper treatment of the seeds by them or by those who collect the seeds. It is sometimes the result of collectors picking the pods before they are ripe; then there may be some error in cleaning the seeds. Or it may be that after gathering the seeds are allowed to become too dry before they are sown. With purchased seeds there is something wrong often, as is proved by such seeds failing to grow when some of the same kind of magnolia gathered from home collected seeds grow very well. As magnolia seeds are purchased they are usually dried with pulp on, just as they come from the tree. If kept in a dry place so that mould does not start, such seeds will keep good for two or three months, at least. But it is better to get the pulp off very soon after the seeds are gathered. Some place them in a heap, pouring water over them to rot the pulp, but this is not a good way, as it encourages fungus, which is very apt to destroy the seeds. It is much better to get sifted sand and mix the seeds with this, in a box, the sand to be damp, so that the pulp will soften. In a week or two the seeds can be washed free of sand and pulp, and then if there is an opportunity to sow it outdoors this can be done at once. If frozen up outside, get more sifted sand and mix the clean seed with it again, and keep it in a cool place until the weather permits of sowing it outside.

It is not too late to prepare such seeds now. The writer had some Magnolia grandiflora seeds which he fixed in this way in January last, and which resulted in almost every seed growing. After preparing it as herein recommended the seed was sown in a pot, in a greenhouse, in March—a good way to sow all kinds of magnolia seeds when but a few are in question.

Seeds of the hybrid magnolias, Soulangiana, Linnei and others, are sometimes produced and these if sown will give seedlings which will not differ greatly from the parent plants. They may vary a little in the color of the flower and leaf. Many of the named ones that come from Europe are evidently of this class, and numbers are sold as Soulangiana which are seedlings from it. But hybrid magnolias do not seed freely, and their propagation has to be effected from layers rather than from seeds. Strong plants are cut down in Spring, to afford strong shoots for layering later on, in early Summer, and this gives strong plants for selling in two to three years.

Stocks for Cherries.

A correspondent in California writes to ask if any experiments have been made with the common wild cherry, *Cerasus serotina*, as a stock for budding common cherries on, and if so what have been the results. This cherry has been used as a stock, or tried as one, several times, but it is no good for the purpose. Although classed as a cherry it has not much affinity to garden cherries. None of the sorts that bear their flowers and fruit in slender racemes is of any use as a stock for the others.

Our nurserymen use the Mazzard cherry principally. This is the wild form from the cultivated garden forms of *Cerasus avium*, which are found wild along fence rows, where the seeds have been dropped by birds. The Mazzard makes a strong stock, giving a tree of large size in time.

The Mahaleb cherry is also used a great deal. It is a congenial stock for all the commercial sorts of cherries, but not being a large tree like the Mazzard it causes smaller and less tall trees than those worked on the Mazzard. Either of these would make a good stock for the correspondent, better by far than the wild serotina.

What we know as pie, or Morello cherries, are in another class, supposed to have originated from one of Europe called *Cerasus capriana*. The trees are hardy, perhaps more so than the Mazzard, hence its stocks are favorites in the colder States where other kinds of stocks suffer from the cold of Winter. In fact, the common sweet cherries are sometimes worked on this stock to advantage in States when the freezings are very severe.

Our California correspondent had better keep to the Mazzard stock and to the Mahaleb, for these, especially the former, have proved their worth across his State line in Oregon and Washington. The one he mentions, *C. serotina*, is of no use for stocks. It is a useful shade tree and a nice ornamental subject; further, it is a good timber tree, and experiments with it have proved it one of the hardiest of our wild trees. Foresters might

do worse than set out groves of this tree for its future value.

Variegated-Leaved Vitis.

A good vine to list for selling the coming Spring is the *Vitis heterophylla variegata*, a Japanese species, often found in catalogue lists under the name of variegated grape. Its appearance and growth are more allied to those of ampelopsis, as this is recognized in collections. But by whatever name called it is a good thing. A strong plant in good soil will make a growth of six to eight feet in a season. The leaves will be nicely variegated and to add to its attractiveness its leaf stalks and often the shoots themselves are of a light pink tint. The flowers make no display, being of a light green, as are those of all other species, but the berries that follow are of great beauty as they ripen, changing from green to pink and from pink to an indigo blue.

This vine is well used in large vases, its foliage

and it would pay no one to plant the tree for profit.

A nurseryman near Lancaster, Pa., started to raise seedlings from these Philadelphia trees a few years ago, thinking to gain a hardier race than common there by, as no doubt he would. But although this can be done, it takes so many years to accomplish it that as a matter of profit it would come to another generation. Trees change their character slowly.

It is quite likely that if proper efforts were made seedlings could be had from colder parts of Europe than ordinarily, which would prove harder than those now imported, and in this way its extension in our Northern States could be advanced.

Beauty of Retinisporas.

Landscape gardeners find the various species of retinisporas among the most useful of the evergreens their plantings call for. Pines, firs and spruces must be had, there are positions no other evergreens could fill as well. This is equally true of retinisporas. Their appearance and growth are unlike those of any other hardy evergreen, so that in a way they must be secured.

The kinds most often called for are obtusa, pisifera, plumosa and their golden varieties; but their dwarf forms are also in great demand.

To meet the tastes of customers the nurseryman has to grow some sheared and some allowed to grow naturally. As a rule, the latter kind are far more pleasing to look upon, but it is a case of filling orders and not of taste, therefore the sheared ones have to be provided as well as the others. But such a one as *R. squarrosa* needs no pruning, it only calls for the shortening in of some of its shoots that are far out of line of symmetry. Its growth is exceedingly close, and when sheared it becomes more dense than ever, so very thick in fact that the foliage, much of it, is smothered and killed; and this is why this one is so often disfigured by dead twigs. This disfigurement is not met with, or but rarely, on unpruned trees. These remarks apply to all retinisporas to some extent, but more particularly to *R. squarrosa*.

These evergreens are most useful for screening purposes, more so than Arbor vitas, having prettier foliage and a bushier growth. Like the Arbor vite they transplant very well, especially when care is taken to lift them with a ball of earth attached to the roots.

January is a good time to make cuttings of retinisporas. Taken from outdoor plants and made into lengths of four inches, they nearly all root when placed in sand, in boxes, in a warm greenhouse. When Spring comes they can be potted or transplanted into frames for a year. They are rather small to be set out in nursery rows until a year has passed.

JOSEPH MEEHAN.

Retinispora Obtusa Nana Gracilis

Photo by John F. Johnston

blending well with such other plants as are employed for that purpose, and its habit of growth suiting the position.

If a plant can be secured in a pot and it is placed in a greenhouse where an early growth is made, its young shoots afford cuttings which root freely. Green wood cuttings can be had from outdoor plants in Summer, or hard wood can be made into cuttings in Winter and these planted outdoors in early Spring.

Seedling English Walnuts.

Among the many industries in the line of fruit growing now receiving attention inquiries are being made as to the profitableness of attempting a grove of English walnuts. Such an inquiry comes to us from New York State. This walnut is quite hardy in Southern Pennsylvania, and is found in isolated cases growing well in New York State. But it is the same with this as with all fruit and other trees, viz., that when they approach the boundary line of their hardiness they do not thrive as well as they do when in more congenial climes; and this suggests the inadvisability of attempting a grove of them under such conditions. In the neighborhood of Philadelphia there are quite a number of these walnut trees, quite hardy and bearing good crops of nuts every year. But with the ships of all nations coming to the city's wharves this walnut is to be had easily at all times from the Mediterranean coun-

NEBRASKA NURSERYMEN WANT RAILROAD RATES CHANGED. On January 3, 1908, at Lincoln, Neb., nurserymen Peter Youngers of Geneva, W. A. Harrison of York and Harvey Marshall of Arlington, obtained a hearing from the state railway commission on a protest. The commission promised to take up the matter with the railroads and try to secure a satisfactory settlement by correspondence. The protest involved the following points:

First. We respectfully request that a 20 per cent. reduction be made in joint rates where goods are shipped over two or more lines, the same as now in effect in the State of Iowa.

Second. We request that the following items on page 118, at No. 50, (orange seed, worth about \$3.50 per bushel, now in first class, should be placed in third class, along with alfalfa and seeds not otherwise specified, (see No. 50 on Page 118.)

Third. On page 96, Nos. 49, 50 and 51, places buckeyes and butternuts, worth about \$1 per one hundred pounds, and walnuts, worth about 60 cents per one hundred pounds, as second class, which should read fourth class, the same as peach stones. (Page 113, No. 57.)

We further request that your honorable body eliminate the words "or in No. 55 on page 95 "invoice value, not exceeding \$5 per one hundred pounds" and items No. 25 to 45 inclusive, on page 96, which is eliminated by the railroads in their official classification.

THE FLORISTS' EXCHANGE

Flower for Name.—H. H., New Jersey. —The name of the flower is Impatiens Sultanii.

(10) **Stag Horn Fern.**—What is the botanical name of the stag horn fern? A. READER.

—Platycerium; there are several varieties.

(11) **Red Spider on Carnations.**—I would be glad to know the best way to destroy red spider on carnations. I notice in your issue of December 21 J. F. M. is asking for advice for thrips on carnations. I thought he might have made a mistake. Has he thrips or red spider? G. G.

New York.
—The best remedy for red spider is a good strong force of water direct from the hose pipe, applied on all favorable occasions. The ravages of thrips are easily distinguished from those of red spider. Thrips leave white spots on the leaves by sucking out the juices; red spider leaves the foliage brown and dry, and with a tendency to curl under at the edges of the leaves.

(12) **Trouble with Plants in Store Window.**—We send sample of fern leaves cut from a batch of plants in our store window, where the temperature is about 60 to 70 degrees. The plants are kept moderately wet. We have a variety of stock in the same window, but none of it is affected as those sent. Can you give us a reason or remedy? We cannot understand why a few plants are affected in a batch of fifty or more. A. A. H.

New York.
—There are few ferns that make satisfactory window plants for a retail store, where the temperature is so variable as in this instance. Keep the temperature at about 60 degrees all the time and the plants carefully watered and both the nephrolepis and pteris will keep for a number of days without being injured in any way.

(13) **Rose Leaves Affected by Gas.**—We send you sample of rose leaves, and would like to have you tell us what is the matter with them. As soon as the rose bushes make new leaves, they wither and die, like the sample enclosed. We grow Bride and Bridesmaid together. Are they affected by gas, or is the soil too wet? Did smoking the house injure them, or red spider? We keep the house at 60 degrees, and it is near the boiler. SUBSCRIBERS.

—The rose leaves reached me in a rather dry condition, but from their appearance I should say the reason they drop is that gas from the boiler pit has reached them. The only remedy is to prevent the gas from entering the greenhouse. If the plants had been kept too wet the foliage would have much the same appearance, but would not drop off so readily. In either case allow the bench to get fairly dry, give a light coating of lime (air slacked), scratch it in, then water thoroughly, after which allow the bench to dry out again before giving more water. Syringe well on clear days, being careful not to get too much water on the soil. As the days are getting longer the plants, if not too far gone, should soon recover. PENN.

(14) **Shipping Boxes for Sweet Peas, etc.** I wish to make some boxes for shipping asters, sweet peas, etc., to market. Kindly give me size of box for 100 blooms, four to pack, etc., to reach the market in good condition. Can reach market in about twelve hours. New York. L. L. C.

The boxes to hold 100 sweet peas should be 20x5x3 inches. These flowers, when twenty-five in a bunch, and damp sphagnum moss put over the stems, will travel over 1000 miles safely. I do not grow asters, but think a box 24x10x5 inches will hold one hundred of the largest flowers. To ship them twelve hours distant, they should be covered with damp sphagnum moss to keep them fresh. A. C. Z.

(15) **Cockroaches.** I am herewith enclosing a bug which can be found by

FERNS LATANIAS

MY SPECIALTY

150,000 assorted ferns for jardinières, excellent stock, in 15 of the best market varieties, including Cyrtomium Fatatum, Aspidium Tsusemense, Pteris Wimsettii and Mnyli, in good proportion, from 2 1/4 in. pots, \$3.00 per 100; \$25.00 per 1000; 600 at 1000 rate.

CENTER PLANTS (Exact Size)

Kentia Belmoreana, 2 1/4 in., \$1.30 per doz., \$10.00 per 100.
Assorted Ferns, 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
Adiantum Cucullatum, fine stock, 2 1/4 in., \$3.50 per 100, \$30.00 per 1000; 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
Adiantum Farleyense, 4 in., \$4.76 per doz., \$35.00 per 100; 6 in., \$8.60 per doz., \$65.00 per 100, \$12.00 per doz.
Adiantum Rholophyllum, 4 in., \$2.60 per doz., \$20.00 per 100; 5 in., \$8.50 per doz., \$40.00 per 100.
Adiantum Graecillum, 2 1/4 in., \$3.60 per 100, \$30.00 per 1000.
Adiantum Regina, 4 in., \$3.00 per doz., \$22.00 per 100; 5 in., \$6.00 per doz., \$45.00 per 100.
Cibotium Schiedel, 4 in., \$3.50 per doz., \$25.00 per 100.
Nephrolepis Scottii, 6 in., \$7.00 per doz., \$60.00 per 100; 8 in., \$16.00 per doz., worth the double.
Elegantissima and Pieroni, 5 in., \$6.50 per doz.
Fern Spores, gathered from my own stock, guaranteed fresh, 1907 crop, good, commercial varieties, 30c. per trade pkt.; \$3.00 per dozen.

J. F. ANDERSON, Short Hills, N. J.

Bushy Ferns

Unusually fine stock of the Holly Fern (Cyrtomium fatatum), Pteris cretica albo, Pteris Wimsettii etc. 3 in. pots, 6c.; 2 in. pots, 3c. We have never had better plants and will give you very liberal count on January orders.

Cibotium Schiedel, 3 in. pots for growing on, 20c.
ASPARAGUS Plumosus, extra strong 2 in. stock but with some of the foliage slightly disfigured. (Give them a small shift and they will make fine plants) \$2.00 per 100.
PRIMULA Obconica Grand. In full bloom. 3 in. pots, 5c.; 1/2 in. pots, 6c.; 4 in. pots, 8c.

R. G. HANFORD, NORWALK, CONN.

FERNS For Jardinières

Best varieties, strong, healthy plants from 2 1/4-inch pots, \$3.00 per 100; \$25.00 per 1000, 600 at 1000 rate. 2-inch, \$6.00 per 100.
CIBOTIUM Schiedel, 6-in. pots, \$1.00 each. Nephrolepis Scottii, 7-in. 75c. and \$1.00 each; 9-in. \$1.50 and \$2.00 each.
FRANK N. ESKESEN, Main Street, Madison, N. J.

FERNS

BOSTON per 100, \$10.00 } Fine plants.
SCOTTII per 100, 10.00 }
WHITMANI FERNs, fine bushy plants, 5 inch, \$6.00 per dozen.

PAUL J. BURGEVIN, Port Chester, N. Y.

FERNs, FERNs, FERNs

Fine stock of assorted ferns in best market varieties from 2 1/4 in. pots, at \$3.00 per 100 plants, or \$25.00 per 1000.
Cibotium Schiedel from 4 in. pots, at \$30.00 per 100 plants.

THOMAS P. CHRISTENSEN, Short Hills, N. J.

FERNs For Dishes

Fine strong plants from 2 1/2 in. pots, all leading varieties, \$3.00 per 100, \$25.00 per 1000. Cash with order.

EMIL LEULY, Summit Ave., West Hoboken, N. J.

the hundreds on my palms, roses and carnations in the greenhouses and which are ruining the plants. Will you kindly inform me of the name of same and what I can do to get rid of it? New York. J. M. J.

—The bug sent is the common cockroach found in dwelling houses; we would advise an application of Slug Shot to eradicate the pest.

Fine strong plants, 2 in., \$3.00 per 100, \$26.00 per 1000; 3 in., \$6.00 per 100, \$50.00 per 1000; 4 in., \$16.00 per 100.
KENTIAS, Belmoreana and Forsterhann, 4 in. 25c., 36c.; 6 in. 60c., 76c.; 6 in. \$1.25, \$1.60; large plants, \$2.00 to \$35.00 each.
PHOENIX, large, from \$2.00 to \$40.00 each.
PANDANUS Urtilis, strong 2 in. \$3.60 per 100; \$30.00 per 1000.
AZALEAS INDICA, fine plants, 16c. to \$2.00 each.

FERNs

Boston and Pieroni, 4 in. 15c., 6 in. 25c., 6 in. 50c., 7 in. 76c.

Price, postpaid, \$2.50
A. T. De La Mare Ptg. & Pub. Co., Ltd., 2 to 8 Duane St., New York

ORCHIDS

We are now booking orders for freshly imported orchids of all leading kinds to arrive during 1908, at greatly reduced prices. Write us for information as to kinds and prices.

We have just received the following orchids: Oncidium Tigrinum, O. Sarcodeus, O. Forbesii, Sophronitis grandiflora and cocinena.
LAGER & HURRELL, Summit, N. J.

ORCHIDS

Largest Importers, Exporters, Growers and Hybridists in the world.
Sander, St. Albans, England
and
235 Broadway, Room 1, New York City.

ORCHIDS

We shall receive this Spring large quantities of imported ORCHIDS, namely: Cattleyas, Dendrobiums, Oncidiums, Laelias, Vandas, etc. Our facilities for handling large consignments are second to none. We have four collectors, including our Mr. Carrillo, who collect exclusively for us. Our quality and price are too well known to need further comment—a trial order will prove it.
CARRILLO & BALDWIN, Secaucus, N. J.

Thousands of Orchids

In Sheath, Bud and Flower.

THE GROWERS' OPPORTUNITY

Rooted cuttings of all soft-wooded plants are in demand at this time by florists who do not propagate their own stock. Growers making a specialty of the rooted cutting business will find an advertisement placed in THE FLORISTS' EXCHANGE a very profitable investment.

LIST OF ADVERTISERS

Table listing various florists and their addresses, including Akers H. R., Allen J. H., Amherst J., and many others.

Table listing florists and their addresses, including Weber C. S. & Co., White E. F. & Co., and others.

INDEX TO STOCK ADVERTISED

Table listing various types of plants and seeds, such as Abutilum, Ageratum, and others, with corresponding page numbers.

A Bulletin on Dodder.

PODDER IN RELATION TO FARM SEED. This is the subject dealt with by T. H. Hillman, Assistant Botanist, Seed Laboratory, Bureau of Plant Industry, Department of Agriculture, Washington, D. C., in Farmers' Bulletin 306, just issued.

Dr. Galloway, chief of the Bureau, says in his letter of transmittal that "dodder, on account of its parasitic nature, is the most dangerous weed in alfalfa and clover fields, and also often infests flax. On account of the large quantity of low grade seed containing dodder imported from Europe and the prevalence of dodder in the alfalfa growing regions of the West, its seed is becoming more and more common in commercial seeds. In this paper an attempt has been made to point out the dangerous character of the various kinds of dodder and to give practical suggestions for the eradication of dodder from infested areas."

Mr. Hillman has produced a very instructive document. As showing the sentiment regarding this pest in Europe, he says: "Reports upon seed tests at the European seed-control stations usually make particular reference to the presence or absence of dodder. As a result of its unpopularity seed containing it is practically unsalable in the domestic trade of most of the European countries. It is owing to this adverse sentiment in Europe regarding dodder-infested seed, and the absence in this country of a national law prohibiting the importation and sale of such seed, that so much dodder is annually distributed throughout the United States."

After describing the various kinds of dodder, also those infesting farm seed, and telling of the preference of the dodders for certain host plants, also of the kinds of seeds infested with the parasite, which in this country are restricted to seeds of flax, the red clovers, alsike clover, white clover and alfalfa, to which may be added yellow trefoil, which "as an adulterant frequently used may introduce dodder to otherwise dodder-free clover or alfalfa, the bulletin discusses the relation of dodder to the seed trade, as follows:

"The most direct relation between dodder seed and the business of seed buying and selling is based upon the regions of growth of the dodder and the size of its seed as compared with that of the commercial seeds handled. The kind of dodder is largely influenced by the place of seed production, while the size of the dodder seed, which is dependent chiefly on the kind, has much to do with the result of efforts at cleaning and the consequent condition of the seed when it reaches the consumer. Large quantities of the flax, clover, and alfalfa seeds on the American market are imported, often from regions where certain kinds of dodder are abundant.

"The regions of seed production are then given. With regard to flax seed little is to be said of the relation of the place of production and flax dodder. This dodder is so widely prevalent in flax regions that its presence in flax seed is always possible.

"Red clover seed is imported largely from Germany and to some extent from France, England and Canada. Chilean red clover seed grown in South America is being imported in considerable quantity. There is also an active domestic traffic in red clover.

"Alsike clover seed when imported comes chiefly from Ontario, very little being imported from Europe. It is also produced in the northern United States. White clover is often imported from Europe, but is also produced in this country.

"Crimson clover, which figures largely in the import as well as the domestic trade, bears practically no relation to dodder dissemination when not adulterated, owing to its early seedling period which precedes that of the dodders by a month or more. Dodder seed, therefore, practically never appears in pure crimson clover seed.

"Alfalfa seed is imported from Germany, southern France, Italy, Turkey and Argentina. Much of the seed used in this country is produced in the Western States, particularly Utah, Wyoming and Colorado. Seed reaching the consumer may be freed from any one of the regions just mentioned, or if mixing the seed is practiced by the dealer, more than one region of production may be represented by the seed purchased.

Contents

Table listing various articles and their page numbers, including American Breeders' Association, American Rose Society, and others.

Chilean dodder is common in red clover and alfalfa seeds from Chile and Argentina. It is not known that its seeds occur in domestic grown seed.

Illustrations showing most of the different dodders are presented; and methods of cleaning the seeds suggested. It is doubtful if alsike and white clovers can be cleaned of dodder, although the amount of clover dodder can be reduced somewhat by the use of proper sieves, which, however, necessitate the loss of considerable clover seed. Red clover and alfalfa seeds can be cleaned of clover dodder and small-seeded alfalfa dodder by the use of a sieve having 20 meshes to the linear inch and tangle of wire ranging from No. 20 to No. 34 of Washburn & Moen gauge. It is believed that the most effective work will result from using first a No. 34 sieve and then passing the siftings thus obtained over a sieve of No. 50 wire.

"With respect to the other kinds of dodder discussed in the bulletin and found in clover and alfalfa seeds, it may be said that none of the sieves mentioned will remove all the seed, even with repeated sifting. Much of the dodder seed will be removed, especially if a sieve having No. 24 wire is used. The farm owners of wholly grown, these large-seeded kinds, as flax, may..."

"Deep sowing of the crop appears to be the most promising course for the farmer to follow in using seed known to contain seeds of the large-seeded dodders. By this means many seeds of dodder seeds will be buried so deep that their plants, reaching the surface, will be killed by frost. Sifting the seed, by which it is possible of the dodder is removed, is therefore, most advisable. Flax dodder or be removed from flax seed by very little loss by the use of a sieve of 14 meshes to the linear inch and tangle of No. 29 wire, Washburn & Moen gauge.

"It often happens that seed is received by an unscrupulous dodder capitalist, who purports to be genuine with the usual 'if you can't beat 'em, join 'em' motto."

"The bulletin closes with chapters on detecting the dodder plant in the field and destroying the plants by burning etc.

BARGAIN PRICES IN A NO. 1 PLANTS

VARIETIES OF ERICAS FOR EASTER GROWING

Erica Cupressina, well budded, pink, 4 in. pots, doz. \$2.00; 100 \$20.00.
 Erica Cavendishi, for growing on, yellow, 3 1/2 in. pots, dozen \$2.00.
 Erica Cavendishi, well budded, 5 1/2 in. pots, doz. \$18.00; 100 \$100.00.
 Erica Cavendishi, well budded, 6 in., large, doz. \$20.00; 100 \$200.00.
 Erica Persolota Rubra, well budded, light pink, doz. \$2.50; 100 \$25.00.
 Erica Transluens, well budded, 4 in., pink trumpet, doz. \$3.00; 100 \$30.00.
 Erica Transluens, well budded, pink trumpet, 5 1/2 in. pots, doz. \$24.00; 100 \$150.00.
 Boronia Elatior, red, fine, 4 1/2 in. pots, doz. \$2.00; 100 \$15.00.
 Boronia Elatior, red, fine, 5 1/2 in. and 6 in. pots, doz. \$15.00; 100 \$100.00.
 Genista Raremosa, fine, globular-shaped plants, from 5 in. pots, doz. \$4.00, 100 \$30.00; larger plants, 6 in. pots, doz. \$12.00; 7 in. pots, doz. \$18.00.
 Specimens and Standards, \$2.00 each.

FOR EASTER BLOOMING

Azalea, Princess Victoria, finest pink, new, doz. \$6.00; 100 \$60.00.
 Azalea, new lavender color, 10 to 12 in. crowns, \$12.00 per doz. No other such nice color among azaleas; fine, large, bushy plants.

BLOOMING NOW!

Epacris alba, 4 in. pots, doz. \$2.00.
 Primula obconica, 4 1/2 in., doz. \$2.00.
 Cyclamen Persicum, 5 in. pots, doz. \$4.00. 100 \$35.00.
 Daisy Plants, well budded, 7 in. pots, doz. \$9.00; 100 \$50.00.
 Daisy Plants, 3 in. pots, 75c. doz.; \$5.90 per 100.
 Boston Ferns, 2 1/2 in. pots, doz. \$1.00; 100 \$6.00.
 Boston Ferns, 4 in. pots, doz. \$2.00; 100 \$15.00.
 Whitmani Ferns, 2 1/2 in. pots, doz. \$1.00; 100 \$8.00.

ANTON SCHULTHEIS, 316 19th St., P. O. Box 78, COLLEGE POINT, L. I., N. Y.
 Telephone: 1682 Flushing

Whitmani Ferns, 2 1/2 in. pots, doz. \$2.00; 100 \$15.00.
 Whitmani Ferns, 5 1/2 in. pots, doz. \$9.00; 100 \$60.00.
 Whitmani Ferns, large, \$1.50 each.
 Scottii Ferns, 2 1/2 in. pots, doz. \$1.00; 100 \$5.00.
 Scottii Ferns, 6 in. pots, doz. \$6.00; 100 \$50.00.
 Cibotium Schmidtii, 6 in. pots, doz. \$18.00.
 Cibotium Schmidtii, 7 and 8 in. pots, doz. \$24.00.

FOR GROWING ON!

Erica Fragrans, the great Christmas variety, 4 1/2 in. pots, 100 \$15.00.
 Erica Regemimans, white Christmas variety, 4 1/2 in. pots, doz. \$2.00.
 Erica Arborea, new, 4 1/2 in. pots, doz. \$2.00.
 Baby Rambler Roses, 5 in. pots, in growing condition, doz. \$6.00; 100 \$45.00.
 Baby Rambler Roses, 5 and 5 1/2 in. pots, dormant, doz. \$5.00, 100 \$35.00.
 Baby Rambler Roses, Annie Muller, 6 in. pots, started, doz. \$9.00; 100 \$60.00.
 Baby Rambler Roses, Annie Muller, 6 in., dormant, doz. \$6.00; 100 \$45.00.
 Hiawatha, started, 6 in. pots, doz. \$9.00, not started, doz. \$7.00.
 Asparagus Plumosus, 3 1/2 in. pots, doz. \$1.00, 100 \$10.00.
 Asparagus Plumosus, 4 1/2 in. pots, doz. \$3.00; 100 \$20.00.
 Aspidistra, green, low and bushy, 5 in. pots, doz. \$9.00.
 Aspidistra, green, taller, 6 in. pots, doz. \$12.00.
 Gardenias, 3 1/2 in. pots, doz. \$2.00.
 Oranges, well fruited, 5 1/2 in. pots, doz. \$18.00; 6 in. pots, doz. \$24.00; 7 and 8 in. pots, specimens, \$5.00 and \$6.00 each.
 Araucaria Excelsa, 5 1/2 in. pots, doz. \$6.00, 6 in. pots, \$9.00 and \$12.00 per doz.
 Kentia Belmoreana, from \$1.00, \$1.50, \$2.00, \$2.50 to \$3.00 each; fine and perfectly shaped plants.
 Rubbers, \$6.00 and \$9.00 per doz.; 3 in. a pot, \$2.50 each.

Above prices are net. Cash with order. No charges for cases or packing.

THE WEEK'S WORK

Timme's Timely Teachings.

Order Now!

This is the ripening season of the catalogue crop, a bounteous harvest by no means to be valued lightly because it drops into our laps without the least exertion on our part. If half the people who receive one or more of these business letters with every mail only knew what an amount of expense and painstaking labor is required in the compilation and making up of the up-to-date kind of catalogue, these same people would linger them with more respect, probably be highly flattered by being placed in line with a live firm's best patrons. The great majority of hard working florists appreciate the value of a complete and accurately gotten up catalogue, many of them waiting its arrival with some degree of anxiety. Any one of these, the enterprising retail grower in particular, never considers his preparations or his stock for a coming season's business so fully complete as he would wish. There is always yet something in the seed, bulb, or plant line, something not to be found in the advertisements of his paper, that must be obtained and when this is the case the list of all that is needed is made up from the catalogue of a reliable firm, and the sooner this is done and the order forwarded the better it is.

A Suggestion.

In looking over what is offered in our catalogues in seeds and plants it is found that many of the varieties and sub-varieties listed are such that no true gardener or up-to-date florist would ever touch, no matter how low the price. Some of the things thus needlessly encumbering an already long enough list, have outlived their value long ago, are not worth growing any more, a fact not denied by anybody. Why not stop handling seeds of avowedly worthless things? Why not cut them out forever and thereby effect the abridgement of lists truly bewildering in their pedantic super-completeness? It is no joke for the lay gardener or newly initiated florist to grope his way through a perplexing jungle of sub-varieties under the belief that all are good or they would not be there, and then yield to persuasion of low price and select such as are found eventually to cool his ardor and upset his ideas as to floriculture advancement told about in his catalogue. The great improvement over old varieties is undeniably there, but it does not require a long train of these old ones to be constantly trailed along to prove it. Some few of the seed firms seem already to have come to the same conclusion and deserve thanks for having at least confined themselves in their trade lists to what are known to be the best varieties only. To make up an order from these is rather a pleasant than a perplexing task. And, after all, why should the dealers in bulbs, seeds, plants and rooted cuttings be exempt from weeding out and discarding worthless stock? We growers have to do it right along.

Novelties.

To every progressive florist the list of new and rare things in the catalogue is always of greatest interest. In selecting from this list, though it is never over-long, his trustworthy adviser, experience, is of little avail, and his chances for making a hit are not very bright. The descriptions are those of the originators and introducers, and if anything chosen proves different from what it is represented to be, the sender of the catalogue is not to blame. This leaves us at sea without our rudder, depending for chance direction entirely on wind. A new plant or a new variety is not always a good one, it must be remembered, and the originator, as is well known, is only too apt to see more in it than anybody else would. A novelty which has nothing to recommend it but its newness is of doubtful value, but there are plenty of such sent out every year, and somehow it seems it is more difficult to miss these than to hit an exceedingly good one occasionally. Then too, we must not overlook the fact that a novelty may actually have proved an excellent acquisition where it originated, may behave splendidly and develop all those fine qualities it was claimed to possess in one quarter of the globe, while in another it refuses to do so. On the other hand,

there are cases, though not so numerous, where doubtful mind and honest intent on the part of the originator caused him to use the utmost moderation in the description of his novelty, which, after being taken in hand by some good grower in another locality, turned out to be a splendid thing. To rely, in choosing a new variety or plant, on an outcome of this kind by queer twist of fate is not advisable. To sum up, there seems to be no other way in finding out what a novelty is to be like than to grow it on one's own place. The retail grower, whose best customers every Spring open the plant season with the question, "What have you new in the plant line this year?" must be prepared for this sort of trade. If he attempts to do too much in this direction he will likely enjoy it less than by buying and trying a few of the most promising and desirable novelties every Spring. The direct and ultimate gain in business and pleasure is always greater than the occasional disappointment or actual expense. It is well to subject everything new to a thorough test first, before placing it on sale, and never to condemn a new thing until it is thoroughly tested.

Now to be Started.

The seeds of most kinds of bedding stock handled in quantity by florists will grow into finer plants for the purpose if sown later than this; the fastest growing kinds need not be sown before the beginning or middle of March. But there are some, if to be included in the stock for Spring sales and to be in presentable condition at that time, that must now be started. Such are the varieties of Begonia semperflorens, the trailing and upright kinds of annual lobelias, all kinds of salvias, torenias, centaureas, tuberosus begonias, Vinca rosea, impatiens, snapdragons for bedding and some hardy herbaceous species, that, if sown now, will flower the first season.

It is not too soon to start a couple of boxes of verbenas, another sowing to follow in two or three weeks from now; nor is it too late for the last sowing of myosotis, pansies or daisies, which will grow into good stock for late sales. Four-inch potted plants, shapely bushes in full bloom of single and double petunias, Marguerite carnations, snapdragons, salvia Bonfire, Phlox nana compacta, mignonette and similar plants always sell well throughout Spring and it pays to raise some of each for the trade in moderately priced greenhouse plants, since they yield a higher profit with less effort than the regular greenhouse stock. Of all these to be right in good season the seeds must be started now. Though some of them may be grown into fairly good stock from cuttings, it will be found that seedlings, even if somewhat later in coming into bloom, invariably make the finest plants for this line of trade.

Seeds of glloxinia, primula, smilax, asparagus, caninus, Musa ensete, Dracena indivisa, grevillea, Astilbe Davidii, Phlox decussata, Clematis paniculata, Stokesia cyana and Ampelopsis Veitchii should also now be sown in order to obtain strong plants and to have the first transplanting over with before the busiest time in the handling of young stock begins. Where a suitable bench for the raising of sweet peas can be spared a sowing now—right into the soil of the bench—would result in a well paying crop of flowers at a time when sweet peas are never in over-abundance.

Boxes and Soil.

The best plan, where much of the stock must be raised from seeds, is to select for this particular purpose a bench with bottom heat, spread over the bottom an inch of coarse sand, soil or ashes and have the seed boxes of a size to fit the width of the bench, leaving a space at each end of the box for convenience in lifting out any one from the rest of them. A narrow bench, just affording room for boxes two feet long by fifteen inches wide, placed side by side, their ends not entirely touching either side of the bench, will answer the purpose best. Such a bench need not be a well-lighted one if the boxes are removed to a lighter and also better aired place as soon as the seeds are up, which is necessary in such a case, but a thing savoring of waste-fulness and therefore to be avoided by choosing as light a bench in the first place and one as near to the glass as possible. Much time and work in the handling of boxes are thus saved and sometimes also the contents of a box, all of which counts when several scores of boxes at a time constantly need watching. The boxes in which the seeds are

Stock You Will Need

- MARGUERITE, QUEEN ALEXANDRA. \$3.00 per 100.
- SPIRAEA CLUMPS. Large field clumps full of eyes.
- ASTILBOIDES FLORIBUNDA. \$4.25 per 100, \$40.00 per 1000.
- ASTILBOIDES SUPERBA. \$6.00 per 100.
- NANA COMPACTA. \$4.50 per 100, \$40.00 per 1000.
- JAPONICA. \$4.00 per 100, \$35.00 per 1000.
- BOXWOOD. Fine bush shape plants, 30-36 in. high, 18-20 in. through, \$2.00 each. Pyramid shape, 30-36 in. high, 15 in. through, \$1.75 each.
- RHODODENDRON. Short well formed plants for pots, full of buds, 18 in. size, \$9.00 per dozen, 24 in. size, \$12.00 per dozen.
- AZALEA MOLLIS. Bushy plants, full of buds, force very easily, 12-15 in. high, \$25.00 per 100, 15-18 in. high, \$35.00 per 100.
- AZALEA INDICA. Some especially fine plants in Mad. Van der Cruyssen, Niobe, 16-18 in. crowns, \$1.00 each, 18-20 in. crown, \$2.00 each.
- BOUGAINVILLEA GLABRA SANDERIANA. Short well trimmed plants that will bloom full for Easter 4 in. pot plants, 6-8 in. crowns, \$20.00 per 100, \$2.75 per 12.
- CANNAS. One of the best collections of market varieties including Beauite Potveino, Crimson Bedder, Charles Henderson, Florence Vaughn, etc., strong 2-ey divisions, \$3.00 per 100, \$25.00 per 1000.
- BOSTON FERN. 2 1/2 in. well established, \$4.00 per 100, \$35.00 per 1000.

 Wm. J. CHINNICK, Trenton, N. J.

sown are a trifle over two inches deep; those for the seedlings, after being prick-

ed off, are an inch deeper. These will do for nearly all kinds of seeds with few exceptions, when earthenware pans are preferred. As to soil, we use well-decomposed soil, prepared as is all the rest of potting soil in the Summer by being broken up with a shovel, run through a sieve for the sowing of seeds and the potting into small pots and intermixed to about one-fourth of the entire mass with thoroughly rotted and sifted manure. This mixture is thrown over once more before hard freezing sets in and brought into the potting shed as needed, being used as it is after it has lost its chill for nearly everything requiring sifted soil, forming the main bulk should an admixture of more sand, manure, bone meal or leaf mold be deemed of advantage for the few things that are an exception in the general class of plants that all need but one kind of soil in starting. From the three-inch size up it is better not to sift potting soil, and a layer of unsifted soil in the seed box, on which to spread the finer, will be found to serve the good purpose of keeping the soil pure and sweet by its aid in draining off surplus moisture. Stake soil, or that already used once or taken from weedy gardens, is not fit for the starting of seeds, otherwise there is nothing arbitrary as respects the kind or composition of the soil used for the purpose, and any good mixture, whether a little more enriched or sandy or containing less, may confidently be used in the filling of boxes in which seeds of all the more common kinds are to be started. Neither is the size of the boxes of importance, especially not when but a few kinds of stock are raised from seeds on a place where this feature forms merely a by-play of the business.

Care of Seeds and Seedlings.

When seeds germinate readily and uniformly it is to be regarded a testimonial to the seed firm's rectitude rather than to the skill of the grower. All good seeds, if conditions of moisture and temperature are right, will sprout anywhere, however placed. But when these sprouts are destined to develop into good plants more is required for the attainment of success with seeds. If the firming of soil in the potting of plants is considered essential for the promotion of a vigorous normal growth, it is a point of still greater importance in the starting of seeds. After the boxes are filled with the soil and this is leveled so as to form an even, smooth surface, we sow the seed, care being had to scatter it evenly and not too thickly and then with a piece of smooth wood, heavy and expressly made for the purpose, we press all down quite firmly, so that after this is done the surface is again perfectly even and smooth but over half an inch lower than before. Now the box is watered, and if this is done with any sort of care not a grain of even the smallest kind of seeds will be displaced, pressed into the soil as it is, by the stream issuing from the rose of a properly made watering can. This is our way of doing, a way that for a quarter of a century never missed success in the raising of seedlings from good seeds, and here dwell upon at length in describing it, because all the many failures with seeds are owing more to faultiness in doing things right at the outset, than to bad seeds, wrong kind of soil or after treatment.

Any kind of seeds set on their way in this manner will sprout in due season and grow into sturdy plants without a covering of soil, though for a protection against frequent and rapid drying out of the more robust and fast advancing largekerneled kinds we cover these with a thin layer of soil or press each seed of the more valuable kinds deeper into the box. For a top covering, after the boxes are placed side by side in the bench, paper answers as well as anything, is to be preferred, in fact, to panes of glass or boards for many kinds of seeds, while some few others will start best in a sash-closed propagating case, those requiring a higher degree of heat and atmospheric moisture than the common run of stock so raised. A temperature of from 50 to 60 degrees, with bottom heat a few degrees higher and reasonably moist soil right along, will cause all of the seeds to germinate promptly. As soon as there is evidence of this above ground, the paper must be removed, some very few kinds needing a thin shading after this for a few days as a protection against bright sunshine. While, so far, all of them fared alike as to treatment—or nearly

FRINGED Double Petunias

- Rooted cuttings, by mail. Per 100. LANTANA, 1 in. dwarf, rooted cuttings \$1.50. ABUTILON, R. C. six varieties, French dwarf \$1.50. GAZANIA Splendens, R. C. \$1.00. PLANT CULTURE

PRICE \$1.00

A. T. DE LA MARE PTG. & PUB. CO., 2 Duane Street, New York

alike from now on, if there is any difference in the course to be followed in exceptional cases, as regards degree of heat, light and moisture at present, or need of early transplanting, kind and condition of soil to be used in their later stages of growth, the methods of culture must vary according to the requirements of the respective kinds. Of this there will probably be more to say at the proper time. What is of most importance to every grower just now is not to be behind time in replenishing his stock, to order early what may be needed in plants, rooted cuttings, Summer-flowering bulbs and seeds, to select wisely and to start rightly, so that much in the rearing of young stock may be accomplished in good season and proper manner, without the least hindrance to careful attention to the needs of older stock, in particular that now fairly under way for Easter. FRID. W. TIMME.

New Violet Boston

Introducing this new variety to the public I wish to state that I have been growing it in quantity for the past two years and do not hesitate to say that it is entirely distinct, a strong grower, a free bloomer and the finest single violet in cultivation.

Ready for distribution in April and May. Orders booked now. \$12.00 per 100. \$100 per 1,000

application.

YEARLY SUBSCRIPTIONS.

United States and Mexico, \$1.00. Canada, \$2.00.
Foreign countries in postal union, \$2.50. Payable in
advance. Remit by express Money Order, Draft on New
York, Post Office Money Order or Registered Letter.

The address label indicates the date when subscrip-
tion expires and is our only receipt therefor.

REGISTERED CABLE ADDRESS:

Flores, New York.

ADVERTISING RATES.

One-half inch, 75c.; 3-4-inch, \$1.00; 1-inch, \$1.25;
special positions extra. Send for Rate Card showing
discount of 10c., 15c., 25c., or 35c., per inch on contin-
uous advertising. For rates on Wants, etc., see column
for Classified Advertisements.

Rules of Nomenclature.

We talk glibly about rules of nomenclature, but are they really observed with any degree of conscientious effort by the nurseryman and florist? We all agree that rules are necessary to every phase of our social and industrial economy. Without customs, which usage molds into rules, and without laws for the guidance of the irresponsible and careless, confusion is a mild term for such conditions as would inevitably develop. This we all acknowledge. But in the matter of naming new varieties of fruits and flowering plants we are awful sinners.—The National Nurseryman.

Alas and alack that such an honest and truthful confession must be made! Worst of all, some of our national societies, making an effort to deal with nomenclature matters, do not appear to be able or efficient enough to cope with the situation. It seems to us this plant and fruit nomenclature question would be a good one for the Bureau of Plant Industry of the Department of Agriculture at Washington to take care of and put on a workable and reliable basis. The drawback, so far as florists' stock is concerned, is that there is no herbarium or collated records in the possession of the society endeavoring to act as a guide in nomenclature affairs, with the consequence that too much is left to the knowledge of the individual having the matter in charge, which may or may not be sufficiently adequate for the necessary purposes.

It is, of course, out of the question to expect anyone to be a "walking encyclopedia of horticulture," but the nomenclature subject is such a vital one that, for the benefit of all concerned, nothing but the most capable supervision should be accorded it, looking to safeguarding the interests of both the trade and the public.

Therefore we think that when the herbarium of florists' stock now forming by the Department of Agriculture, with the attendant descriptions of each subject cataloged, is completed and in good working condition, the Bureau of Plant Industry will, so far as these subjects are concerned, be fairly well equipped to handle all nomenclature matters of this kind. In fact, the Department might greatly benefit itself, as well as all others interested, by such record and supervision.

About this time of year, records our office almanac, many subscriptions fall due. The address slip on your paper will tell whether yours is included in that category. Don't fail to remit, if you would keep your file complete—something always advantageous.

The American Carnation Society's Meeting and Exhibition.

On Tuesday, Wednesday and Thursday, January 28, 29 and 30, 1908, the American Carnation Society will hold its seventeenth annual meeting and exhibition at Washington, D. C. These are always interesting and successful occasions, and the forthcoming event will, it is safe to say, measure well up to, if it does not excel, its predecessors in every particular. The preparations making by the local club and the officers of the American Carnation Society, both as regards the comfort and entertainment of the visitors and the other concomitants of such affairs, afford convincing ground for this assertion.

The sessions of the society and the exhibition will be held in one building—the Nation Rifles Hall, 618 G street, N. W.—the former on the second, the latter on the first floor.

In our last week's issue we published a very full summary of the prizes to be competed for, one of the best lists yet presented. The program of the meeting, including the papers to be read and the subjects to be discussed, also appears in that number (page 42). The topics to be treated upon are all of them of a most interesting and instructive character. The subjects of carnation breeding and hybridizing are to receive a full share of attention. The American Breeders' Association will assemble at Washington on the same dates as those upon which the Carnation Society meets, and we understand that the breeding of carnations will also form one of the themes to be discussed by that body. Thus will the subject be dealt with from a scientific as well as a practical point of view. It will therefore be seen that an intellectual feast of no mean order is in store for the carnationists at the Washington gathering.

Two other subjects of great interest, each one to be handled by a capable man, are: "What the Buyer of a New Carnation Should Expect From the Originator," by S. S. Skidelsky, Philadelphia, Pa.; and "What the Originator of a New Carnation Should Expect of the Buyer," by Willis N. Rudd, Morgan Park, Ill. From time immemorial the expectations of both the buyer and originator of new carnations have been the highest—sometimes beyond that—in each case, yet many times at variance with what each ultimately got; and to have a code of trade ethics tending to mutually fair treatment prescribed to be followed, lived up to and adhered to—cannot fail to be of service generally. Little good, of course, will proceed from the advice to be given, if the matters end with the last words of the essayists and those who may discuss their papers. However, let us all hope and pray that the seed to be sown will not fall on stony ground.

A departure from former schedules of the society has this year been made in the class (B) for 50 blooms. The present list provides, for the most part, for competition between specified varieties—the kinds now generally in cultivation—instead of by colors as formerly. This will admit of the pitting of the flowers of one variety against others of the same sort, tending to fairer competition, easier judging, and decisions that will better demonstrate the skill of the various growers as associated with the individual varieties exhibited and in competition. The plan should work well, and doubtless will be productive of general satisfaction.

The number of special prizes offered is a large and tempting one, and, taken with the general premiums, should bring out a host of competitors.

It may be regarded as supererogatory, yet we cannot help again referring to the progress of the American Carnation Society. A record of seventeen years of successful work as an organization, to say nothing of the resultant benefits which have accrued to every grower of and dealer in carnations in America from its efforts, which have developed this industry to an extent heretofore unknown, is something of which any society may well be proud. Beginning in a small way, organized as the outcome of what was then looked upon as a necessity, at first it needed but one day in which to put through the annual business affairs of the association; now three days are required for their full and complete adjustment. The conditions which called the American Carnation Society into being seventeen years ago are with us to-day, greatly modified, it is true, through its effective and efficient work, but the society is still as much of a necessity as it ever was. Through its persistency of endeavor, its just and judicial methods, its exhibitions, the helpful instruction it has imparted, it has been the means of elevating the flower it champions to a high standard of perfection, so much so that the new carnations that generally find a place on the list of cultivated kinds at the present time may be said to have undergone a most crucial test, when they finally receive the endorsement of the American Carnation Society. This condition must continue if still further advancement is to be made, and it is likely to do so, for no more earnest men, banded together for the development and improvement of a special flower, and holding together with a fixed purpose in view, exist today than the carnation growers of the United States.

Progress is their watchword, tireless endeavor the means through which their success has been and is achieved; and disappointment but proves a stimulus to renewed and increased activity. It must, indeed, be a source of great gratification to these men to know that their enthusiasm has become contagious, ramifying to all parts of the civilized world; and if "imitation is the sincerest form of flattery," then must they feel highly flattered, indeed, as they learn of societies similar to their own springing up in foreign countries in emulation of their excellent example, and in the work of which the improvement of American varieties of carnations plays a prominent part.

To return to the Washington meeting, we would strongly urge every man who grows and handles carnations to be present there; in no other or better way can he keep posted on the flower that enters so largely into his business and conduces so much to his own financial benefit—an inducement surely worth the time spent and expense incurred in accomplishing the journey.

Society of American Florists and Ornamental Horticulturists.

The following list of appointments has been made by the president of the S. A. F. O. H. W. N. RUDD,
Secretary.

For Entomologist—Professor Frederick L. Washburn,
University of Minn., Minneapolis, Minn.

For Botanist—Professor L. H. Pammel, Ames, Ia.

For Pathologist—Dr. B. M. Duggar, Columbia, Mo.

For Legislative Committee—Benjamin Hammond,
Fishkill-on-the-Hudson, N. Y.; L. B. Coddington, Mur-
ray Hill, N. J.; Wesley Greene, Des Moines, Ia.; E. A.
Moseley, Washington, D. C.; Patrick Welch, Boston,
Mass.

State Vice-Presidents.

Alabama—H. F. I. Davis, Mobile, Ala.
California—Sidney Clack, Menlo Park, Cal.
Colorado—Emil Glauber, Montclair, Col.
Connecticut—Alex. Cumming, 188 Hawthorn street,
Hartford, Conn.

District of Columbia—George H. Cooke, Connecti-
cut avenue and L street, Washington, D. C.

Florida—E. N. Reasoner, Oeeco, Fla.

Georgia—M. C. Pennock, Gainesville, Ga.

Illinois—J. F. Ammann, Edwardsville, Ill.

Fred Lautenschlager, 2561 North Forty-first street,
Court, Chicago, Ill.

Indiana—John Bertermann, 241 Massachusetts ave-
nue, Indianapolis, Ind.

Iowa—J. A. Kramer, Cedar Rapids, Ia.

Kansas—Oscar Roehr, 1425 Fillmore street, Topeka,
Kan.

Kentucky—A. R. Baumer, 644 Fourth avenue, Louis-
ville, Ky.

Louisiana—U. J. Virgin, 838 Canal street, New Or-
leans, La.

Maryland—R. A. Vincent, White Marsh, Md.

Massachusetts—F. E. Palmer, Brookline, Mass.

A. J. Loveless, Lenox, Mass.

Minnesota—C. N. Ruedlinger, 2924 Aldrich avenue,
Minneapolis, Minn.

Mississippi—S. W. Crowell, Rich, Miss.

Missouri—J. Steidle, Central, Mo.

W. L. Rock, 1116 Walnut street, Kansas City,
Mo.

Nebraska—Lewis Henderson, 1519 Farnum street,
Omaha, Neb.

New Hampshire—B. Chase, Derry, N. H.

New Jersey—A. Herrington, Madison, N. J.

New York—G. C. Perkins, Newark, N. Y.

J. Austin Shaw, Box 545, N. Y.

North Carolina—W. Rehder, Wilmington, N. C.

Ohio—E. G. Gillett, 113 East Third street, Cincin-
nati, O.

C. J. Graham, 2849 Euclid avenue, Cleveland, O.

Pennsylvania—E. J. Fancourt, 1612-18 Ludlow street,
Philadelphia, Pa.

T. P. Langhans, 504 Liberty Street, Philadelphia,
Pa.

Rhode Island—Carl Jurgens, Newport, R. I.

South Carolina—F. W. Wessels, Aiken, S. C.

South Dakota—E. C. Newbery, Mitchell, S. D.

Tennessee—C. L. Baum, Knoxville, Tenn.

Texas—E. H. R. Green, Dallas, Texas.

Virginia—J. J. Curran, Salem, Va.

West Virginia—C. P. Dudley, Parkersburg, W. Va.

Wisconsin—C. C. Pollworth, 54 City Hall square,
Milwaukee, Wis.

E. Amerpohl, 214 South Main street, Janesville,
Wis.

Ontario—T. W. Duggan, Brampton, Ont.

Manitoba—H. E. Philpott, Winnipeg, Man.

Commissioner Wieting of the New York State De-
partment of Agriculture in his annual report states
that during the year 490 nurseries in the State were
examined and certificates issued to 485, to the effect
that they were apparently free from San José scale
and other infectious and contagious diseases. In
these nurseries are growing over 80,000,000 trees
and plants, most of them subject to attack of San
José scale.

OUR READERS' VIEWS

Hardiness of *Nymphaea Chromatella*.

Editor Florists' Exchange:

Referring to your criticism in The Florists' Exchange of November 30, 1907, on Dr. Henry S. Conard's book "Water Lilies and How to Grow Them," which I have read with much interest, I beg leave to take exception to that portion of same wherein you state "This unfamiliarity with the nature and habits of some of the varieties the author specifies is also quite apparent. He states of *Nymphaea chromatella* (page 93): 'It is perfectly hardy, even in water so shallow that it must freeze to the bottom.' All who have cultivated the water lily in question know that a few degrees of frost will kill it; also that the roots grow well up above the soil, hence the danger to it from freezing. * * * I would state that I have grown *Nymphaea chromatella* and rosea in the same pond with sulphurea for the past ten years; have never given them any protection from the frost; this pond has a depth of only two feet, and during the winter months the water is frequently only twenty inches deep. The lilies are planted in boxes which brings the crown of the lily within ten inches of the top of the water, and ice has formed ten inches thick on this pond, which would make it rest on the crown of the lily; and none of the above lilies, and a number of others, have ever been affected in the least by the frost. One of our leading aquatic growers advertises in a catalogue this particular lily among the hardy plants.

M. HOMER,

Penna.

In reply to Mr. Homer's statement that *Nymphaea chromatella* and rosea (but what does Mr. Homer mean by rosea? There are many varieties named rosea) have lived in his pond for the past ten years without being injured by frost, and that ice has formed down to the crown of the lily, we do not doubt this statement; his conditions, however, must be different from those of other growers of *N. chromatella*; for it is a fact well known to growers of this lily that a few degrees of frost will kill the crowns that are above the surface of the soil. It is often the case that there are some small side crowns, or eyes, at the base of the main crown, down in the soil, and these protected in this way will grow and make plants after the death of the main crown. It is possible this will explain the difference between Mr. Homer's view and that of the writer, who still claims that *N. chromatella* will not stand to be frozen and therefore cannot be termed "perfectly hardy."

Analysis of Water by Experiment Stations.

Editor Florists' Exchange:

Some time ago we wrote you concerning an analysis of water which we would like to have performed. You recommended us to send our sample to the State Chemist at Geneva, N. Y., which we did, and we have a reply from Dr. W. H. Jordan, Director of the New York State Experiment Station, who informs us that they would not undertake the analysis of our sample.

Now will you kindly tell us what this department is for if not for those who most need its advice? Some time ago we saw the analyses published in your paper from a party in Ohio. Now, likewise, cannot we also, through your assistance, get our sample tested?

It is not for the sake of knowing the constituents of the water, but since using this deep well water our stock is suffering more or less, and we believe that there is something in this water which is detrimental to our stock, and we are most anxious to learn as to how to remedy the cause.

We will be more than pleased if you can get this analysis for us through the New York State Department of Agriculture. We pay a heavy State tax and for that reason we can expect something in return.

West Nyack, N. Y.

KRETSCHMAR BROS.

[We submitted a copy of the foregoing communication to Dr. Jordan, and subjoined in his reply, which is published for the guidance of subscribers generally.

The analyses to which our correspondents refer were sent here by a subscriber in Ohio, and were forwarded by us to the Department of Agriculture, Washington, D. C., for an opinion as to the injurious nature, or otherwise, of the water in the growing of certain plants; the answer to same having been kindly furnished by Professor Cameron of the Physical and Chemical Investigations, Bureau of Soils.

Under the circumstances, the Messrs. Kretschmar are advised to obtain an analysis of the water in question from a local chemist. It is evident that such work does not come within the scope of either the Department of Agriculture or the State Experiment Stations.—Ed. F. E.]

Dr. Jordan's Letter.

New York Agricultural Experiment Station,
Geneva, N. Y.
January 11, 1908.

The Florists' Exchange,
No. 2 Duane Street, New York City.

Gentlemen: I have the honor to acknowledge communication of January 10 enclosing a letter from the Kretschmar Brothers. Enclosed herewith is a copy of the reply which I made to the request of this party. (Reproduced herewith.)

Permit me to state in reply to your letter, that my attitude is to give in all cases all the help that my available knowledge and the time of the Station staff will permit. We answer from 1,000 to 20,000 letters a year and look into a good many matters at the requests of our constituency. When I received the enclosed from the Kretschmar Brothers, I consulted with our horticultural expert as to the possibility of our establishing by chemical analysis any relation between the brittle condition of the carnation stock and the constituents of the water. It seemed to me useless to incur an expense of the time of the chemist for a week at the minimum, and possibly two, to make analyses of these waters unless we could use the results in the way of advice. In the present status of knowledge, a solution of the problem for these people would mean a long continued investigation in the forcing house in order to reach any conclusions, and we are not prepared on account of the large amount of work now on our hands, to take up a new investigation on short notice. The facts are, many people ask these things of us without having any conception of what is involved in the request. There are very many problems remaining to be solved, but we can only take

The Late Victor S. Dorval, Sr.

up a certain number at a time. If there is any chemist in Ohio or any expert in Washington who knows the relation between the constituents of water and the texture or structural condition of plants, I wish he would furnish the world with his information. I do not propose for the sake of pleasing people to fool them with statements which are not backed up by facts. As a matter of fact we are blockaded with work just now and are helpless in taking up anything new which involves a good deal of time.

Yours truly,

W. H. JORDAN, Director.

(COPY)

Geneva, N. Y., January 7, 1908.

Kretschmar Brothers,
West Nyack, N. Y.

Gentlemen:

Yours of December 30th is received, also the samples of water. I fear we shall not be able to give you the help that you are evidently expecting of us. The analysis of water consumes so much time and is so expensive, that we would not care to undertake it unless we felt that the results would be of use. The analysis of these two samples would probably spoil the time of a chemist for at least a week and this would not be justifiable unless we felt that we could somehow connect the results with your troubles. Were we to determine what is present in the water, we would not then be able to tell you what constituent causes the unusual condition of your carnations.

I have consulted with our horticultural experts here and they are not aware of any investigations that show the relation between particular constituents of water and the condition of the plants. For this reason it seems to me that we would not be justified in the expense of these analyses, especially as our Chemical Department is already blockaded with work.

I regret that we cannot help you.

Yours truly,

(Signed) W. H. JORDAN, Director.

Benjamin St. John.

Benjamin St. John, florist, died on his farm near Rockport, Conn., on January 7, 1908, he had been in failing health for some time. He was sixty-five years of age, and survived by a widow and a grown-up son.

Mr. St. John was a well known florist business in Danbury, Conn., for a number of years. The funeral was held from his late home on January 10 and was largely attended and conducted by delegation from Old Well Lodge F. and A. M. of South Norwalk, and Douglas Fowler Post G. A. R., of which organization the deceased was a member.

M. B. Bunker.

Marston Brother Bunker, one of Boston's well-known retail florists, died Sunday, January 12, 1908, at the Boothby Hospital, from the effect of an operation performed on Friday of last week for an internal trouble. Mr. Bunker had been ailing for some months past and went to the hospital on the belief that an operation would bring about his recovery. He seemed to stand the operation all right, but on Saturday he began to grow gradually worse, until the end came at noon on Sunday. His untimely death will come as a great shock to his many friends, both in Boston and in Somerville, Mass., where he resided.

Mr. Bunker was born in Cambridge, Mass., April 25, 1859, and when a young man entered the florist business, having been connected with it in various ways for the past thirty years. He worked for several of Boston's leading florists, including J. Newman & Sons and W. E. Doyle, having been head man for the latter for several years. He also for some time had charge of the flower department of J. R. Whipple & Company at their various hotels. About eight years ago Mr. Bunker started in business on his own account, and had a very popular and successful store at 8 City Hall Avenue. He was a member of Soley Lodge F. and A. M., Somerville; Royal Arch Chapter, America Lodge I. O. O. F., Unity Council R. A.; and Somerville Lodge of Elks.

He leaves a widow, a grown-up son and daughter.
J. W. D.

Victor S. Dorval, Sr.

Victor S. Dorval, Sr., florist, Woodside, L. I., died at his home there on Sunday, January 12, 1908.

Mr. Dorval was born in the city of Maus, Department de la Sarthe, France, on December 8, 1831. After serving a regular apprenticeship as a florist in his native town, he worked for a time in Angers, and, having there laid the foundation of his career, he started in 1856 for Buenos Aires and Montevideo, where he spent five years as a gardener, later becoming a raiser of sheep and cattle, until the civil war in Argentina ruined him. After giving up this latter business, Mr. Dorval traveled for one year over a part of South America collecting plants and seeds in company with the botanist Barraquini Peronssell, who was afterward gardener to the Shah of Persia. While at Montevideo Mr. Dorval made the acquaintance of the botanist Bonpland, who had been gardener to Napoleon I, and cooperated with the celebrated Alexander von Humboldt in the preparation of his work "La Flore du Peru."

Returning to France in 1862, Mr. Dorval resumed the practice of his profession, working for one year in the Jardin des Plantes, Paris, whence he went as foreman to the garden and nurseries of the City of Paris. He occupied this municipal position for two and a half years, then going to Lyons as foreman of the Parc de la Tete d'Or, which supplies the parks, squares and other public places of that city with shrubs and flowers. In 1866 Mr. Dorval came to the United States, going first to Keokuk, Ia., then to Washington, D. C., Newport, R. I., and Whiteston, L. I., working at his trade in all these places. In 1872 he decided to start in business on his own account, and accordingly purchased the property which he occupied at the time of his death. Here he had built up, by hard work, a remunerative business in the raising of cut flowers for the New York market, making a specialty of azuleas, hydrangeas, etc., for the Easter trade. Mr. Dorval enjoyed a very high reputation for his blooms. He was married in 1872 to Miss Kate Rogan of Ireland, who, with two sons and one daughter, survives him. One of the sons, Victor, Jr., is secretary of the Cut Flower Exchange in New York.

Mr. Dorval was a much respected member of the New York Florists' Club.

American Carnations in England.

To the January 1, 1908, issue of *The Gardeners' Chronicle*, London, England, E. H. Jenkins contributes a very interesting article on the status of American varieties of carnations in England and their behavior there. He cites as a representative set of good American varieties, Enchantress, Robert Craig, Mrs. Thomas W. Lawson and White Perfection, adding, that well-grown specimens of these dominate any exhibit of these carnations, catching and holding the attention.

According to Mr. Jenkins the first American variety to attract the attention of English growers was William Scott, although it evidently did not find much favor either with the plantmen or in the market. Then came Mrs. Thomas W. Lawson, and to this variety, rather than its forerunners, is due the great popularity of the American carnation as known to-day in England. "Disappointing as first seen by reason of its indifferent form and color, the variety has since been regarded more favorably, and, at the present time and for some years past, has been grown in vast quantities for the production of blooms for cutting."

A great drawback to the success of our carnations in England is the fogs that occur from time to time in that country and the absence of sunlight in winter. Mr. Jenkins says that, generally speaking, the varieties whose flowers have much blue in their composition suffer the most quickly, and of these C. A. Dana, Nelson Fisher and William Scott are examples. "Aristocrat, so far as present experience goes, promises to be a notorious flower in this respect, for it becomes discolored when exceptionally young. It is an unfortunate failing in an otherwise good and shapely flower. Most of the scarlet-colored varieties and the crimson-scarlet shades more particularly than the bright scarlet shades, become bleached as the result of fog and the long-continued absence of sunlight. What happens in their case is that the more intense coloring either remains developed, or that this brighter tone is afterward destroyed, and much slate color appears instead, giving a dullness and inferiority to the bloom.

"All scarlet flowers appear to suffer most when strong chemical manures have been employed in their cultivation. Some of the maroon-crimson shades, as The President, refuse to develop in winter time, and the crumpled bundle of petals will not unfold. White-flowered kinds and the pink shades suffer the least discolorations, but such full-petaled varieties as Enchantress require a very long time to expand; the well-known variety Fair Maid, with its fewer petals and smaller flowers, being preferred in some instances because it opens to much more freely and quickly."

So far as the question of improvement to be looked for in the future in England is concerned, Mr. Jenkins thinks the ideal variety for winter-flowering will be that having comparatively few petals, and in which the petals are of a large uniform size right to the center. Such a flower in artificial heat will, he says, move easily and readily, and the variety whose flowers do this prove most profitable to the grower. He correctly states that it is not always the variety the flowers of which realize the highest prices in the market that yields the best returns to the cultivator, but rather the variety that opens quickly and flowers profusely over a long period of time. The grower for market has to consider, not what price he gets per bloom, or for a few dozens on the market, but the value of all he can produce from every square yard of glass at home. Whether a variety may prove profitable or otherwise depends, not a little, upon its per-

petal habit of growth and profuse flowering. Mr. Jenkins adds that, generally speaking, varieties of the Lawson type are much in favor for their profuse flowering. "Speaking of this as a type, it is interesting to note that while American raisers have given us many of their 'pink' varieties, as yet they have not given us a good long-stemmed kind of the exquisite pink tone of the old Miss Jolliffe. That most recent pink variety, Winsor, is not only obviously of the Lawson type, but it is a pink with the cerise of Lawson taken out of it. It must, however, at once be said that all of this shade of color

all apparently successful in their work that it is hardly fair to name any one more prominent than another. They have no secrets. The visitor can ask all the questions he desires, all of which will be truthfully answered. Even the so-called "Kodak friend" is welcome.

J. Von der Linden has over 50,000 square feet of glass devoted to violets. A large part of this is at Staatsburgh; there a house of Swanley White is grown for special customers. Marie Louise and the Farquhar are the varieties grown in the Rhinebeck houses. Mr. Von der Linden ships to all the large wholesale markets of the country.

J. M.

T. A. Weston, The "Stray Notes" Englishman Awheel

Stray Notes from Across the Atlantic.

Stray notes mean rambling notes; rambling notes mean wandering notes, and wandering notes suggest that the fellow who writes them is out of sorts. Maybe it's the Shropshire climate, although I am doubtful, for our weather has been out and out rotten everywhere. A short time since I got aboard my bicycle and set out for the northwest. There was a deal of mud about when I started, but I afterward found that Kent was no worse than other places. It was mud and rain everywhere, and it has been so ever since. However, I'm not out this time to talk about the weather, although, perhaps, it is an Englishman's privilege to swear about it. Of late, work has been so pressing that we have small chance to find fault with the weather clerk, and maybe it will comfort some of your readers to know that the seed trade, sweet peas in particular, is booming, with a mighty big boom.

Just now everyone is turning out sweet peas as fast as they know how, which indicates that the public is not yet scared off by untried novelties. However, it will come sure enough, and then the man whose reputation has suffered will find that there are not many people going about labeled "M. U. G."

The list of new varieties is well-nigh complete, and in case some of your readers want to lay down an acre or two to trials, I am sending a list of all the new things going. It's a mighty list and only four of them American.

Mr. Zvolanek will be interested to learn that some of his new sorts were coming into bloom in Guernsey in mid-November, but, of course, they were not in form.

We are having lively times over the American gooseberry mildew. Just imagine our government passing a law compelling all growers to spray or burn affected bushes!

I have been much interested in your reports of the chrysanthemum shows, also in the notes by S. A. Hill. It would seem that exhibitions are getting a bit stale, as they are here. Our leading specialists say that the palmy days of novelty raising are over, and when I saw H. J. Jones recently he said things were a good deal off. Single sorts are becoming popular, however, and there is a fair demand for good marketable kinds.

Carnations are going strong, and some of the latest American varieties were shown well recently. Winsor only lost one point and that for fragrance, or lack of it.

I don't know anyone capable of describing a sweet pea like the great W. A. B., and I must say that I feel like doffing my cap to "The Scientific Special Crops Intense Culture Ranch of Elmhurst, Ill." (Quite a contract job writing all this!) We shall almost need a special sort of envelope when writing for Lady Roosevelt aster; however, the latter looks like being a good thing, and I am on it.

I suppose, too, that I ought to bow to the fellow who penned the homely paragraph about myself. If he were not so far away, I might be after him with a bludgeon.

I see friend Harrison Dick is at it again respecting sweet peas, so I perforce must refer to the subject again. Now just see here, Mr. Dick, when you wrote Baker's stock of Mrs. Chas. Breadmore you didn't mean Charles Foster, for the following is taken from August 24 issue: "Baker's stock of Charles Breadmore is the finest as also their Mrs. Charles Foster." Now isn't that right off? Then again, Baker's were not really the introducers, for they together with Bolton sold the greater part of their stock to Sydenham, who had it grown in California. When it came back, Lord! what a mess it was in! Baker's grew a bit at their own place and their sock at the Reading trials was certainly ahead of the Number 1 and Number 2 stocks of Sydenham. That it is bewitching, there is no gainsaying, but, my, 't is a terror for sporting, although, strange to say, I have had it true both years that I have tried it. There is certainly nothing to equal it when true.

I have had no opportunity of comparing Mrs. Henry Bell and Our Queen, and I want to grow them before I say definitely as to their synonymity.

There are so many cream and pink Spencers going that until they can be tested, one is safe in grouping them. I know Evelyn Hemus is paler than shown, but it will have its work out to hold its own. We want the best, and we want them distinct, and I hope to prove which is the best out of the half dozen cream and pink Spencers now selling.

show up splendidly under artificial light, and this, from the decorative point of view, is of the highest importance."

Mr. Jenkins then adds that other qualities to be borne in mind by the raiser of new kinds include that of rigidity of stem, and while some varieties are altogether too weak, others appear to be too rigid and erect. "Nonsense! I hear someone say, but I refer entirely to the long-stemmed flowers, and the longest of these in particular when used full length on a table, for example, but reveal the back view of a very handsome flower. Moreover, the too rigid stem does not lend itself to the most graceful work, and in the near future the ideal stem will be that which presents the flower to good view by a graceful arch of the upper 8 inches or 10 inches of its stem. The shorter-stemmed Lawsons, rigid as they are beyond comparison, are valuable by reason of their shortness. On the contrary, where stems are 2½ feet or 3 feet long, the rigidity has its drawbacks. In these directions there is abundant room for improvement in the carnation, and if to these qualities could be added the capacity to withstand the so-called 'rust' (*Helminthosporium echinulatum*), a great work will have been accomplished."

Violets at Rhinebeck, N. Y.

The violet industry at this place is now at its best. The growers, pickers, bunchers, and the express companies are kept busy all day as well as far into the night. The season opened up auspiciously and from present prospects is likely to prove a prosperous one.

The violet industry in many sections of the country has been beset by many troubles in the form of disease from which the Rhinebeck growers have up to the present time been happily immune. James Newman, a prominent grower on Violet avenue, related, however, to your correspondent that the plants of three-fourths of the growers are threatened with the gall fly. Mr. Newman states that the fly lays its eggs on the leaf of the plant. These finally drop to the soil, where they hatch out and become maggots that immediately proceed to eat out the heart of the plant. Cyanide gas and all other insecticides Mr. Newman claims have been tried, but to no avail. By close watching the fly has so far not wrought serious injury to the present season's crop.

The growers are so numerous in Rhinebeck and

Violet House of James Newman at Rhinebeck, N. Y.

I quite agree that Nora Unwin, Lord Nelson, and Frank Dolby are this year's 1907 sorts. But Princess Victoria, Elsie Herbert, Rosie Adams, The Marquis, Silas Cole, Nancy Perkins and Prince Olaf are or were then introduced. Then again, the awards of merit were given at the show, merely on sight of the bunches exhibited, with the exception of Nora Unwin. Nancy Perkins and Rosie Adams were not at the trials to my knowledge, so that the awards for these were given on trust; and had Elsie Herbert been seen prior to the giving of the award, I guess it would not have had it. It was nothing like being fixed. The others certainly deserved the awards, as they were good both at the show and at the trials.

However, friend Dick is aware of my peculiarities, and I have no fear of his taking umbrage; and if, as he hopes, further interest can be stimulated in America by these little discussions, well, I am out to take on anyone who steps on the tail of my coat, provided he does it gently.

In conclusion I feel I must tender my sympathy to all members of the S. A. F. O. H. I had got to look upon the name of Secretary Hauswirth as quite a familiar item in 'The Florists' Exchange. It is indeed a very sad affair. T. A. WESTON, Shropshire.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

Suggestions for Dinner Decorations.

Now that the holidays are over the New York florist will settle down to what he hopes will be a steady business, which includes receptions, dinners, balls and other entertainments that call for the aid of the florist, and the use of cut flowers and flowering plants. Dinners appear to be the most popular form of entertainment among the wealthy classes and a dinner table without the embellishment of floral decorations of some sort would amount to vulgarity. Flowers add a certain charm to a table that can not be obtained with the finest gold or silver service or expensive table linen.

Low table decorations are becoming more popular every season. Anything that obstructs the view should be studiously avoided.

Adiantum Farleyense makes a splendid decoration either by itself or combined with flowers. Plants with well-tinted young fronds are especially beautiful for table work. There are other ferns that may be used. Adiantum rhodophyllum shows quite brilliant coloring in the young fronds, also some of the newer varieties of nephrolepis, N. Amerpohli, with its delicate lacy fronds, being one of the best for the purpose.

Adiantum Farleyense and the Richmond rose form a beautiful combination. An arrangement of this description was used for a large dinner this week. The table was twenty-two feet long by six feet wide, an oval basket four feet long being filled with low plants of A. Farleyense. Two circular plateaux were filled in the same manner, the oval arrangement being placed in the center and the round ones at either end. Richmond roses were stemmed just long enough for the flowers to show a few inches above the fern, and instead of being distributed all over the baskets they were arranged in clusters and long sprays. Cut Farleyense was laid on the table and enough roses placed on the fronds to carry out the spray effect and to bring the clusters down to a vanishing point on the tablecloth, large masses of A. Farleyense being left entirely free of roses, making a distinct combination.

Adiantum Farleyense is also beautiful with cactileyas and cyrtipediums; in fact, it gives a richness to a table decoration unobtainable with any other foliage.

The market at present is rich in material for table decoration. Spring flowers are beginning to make their appearance; flowering shrubs, bulbous flowers, wall-flower, snapdragon and a great variety of orchids, while roses and carnations are at their best. Flowering shrubs, while not particularly adaptable for table work, may be used to good advantage for large effects or for high decoration. Forsythia and Japan quince are both in the market and may be used very effectively in tall vases or laid on the tablecloth. Spring flowers, especially the early arrivals, are always welcome for table work and make a pleasant change from roses, carnations, etc. Wallflower, now that it may be had in almost any quantity, makes a splendid decoration for a luncheon. A judicious blending of Spring flowers, wall flower, sweet peas, fuchsia, myosotis, etc., makes a charming arrangement for a luncheon.

Orchids are playing a prominent part in table decoration at present and some magnificent sprays of Calanthe Veitchii, with its beautiful pink coloring, were used at a large dinner given recently. They were arranged in tall silver vases with long sprays of Asparagus plu-

mosus, Cyrtipediums in fact, were used at another affair and proved very interesting. They were arranged in small round baskets with Nephrolepis Amerpohli. A very choice decoration was done with Vanda cœrulea and Phalenopsis amabilis. The arrangement was entirely flat, A. Farleyense being laid on the cloth in various designs, the orchids placed here and there, the white phalenopsis blending with the rare blue of the Vanda cœrulea, and forming a beautiful contrast with the gold service used on the table. D. RAYMOND.

Novel New Year's Ideas.

An original idea designed by James Meiklejohn, manager of the floral department of the Hotel Knickerbocker, New York, for the New Year's celebration at that hotel, made quite a hit. It consisted of a large horn of plenty, made of surfax and American Beauty roses, and was suspended from the music gallery in the main dining room. At exactly twelve midnight the lights were turned out and the number "1908" flashed on an electric sign, and when the lights were turned on again, the horn, worked by compressed air, was seen blowing the petals of American Beauty roses over the guests. The same scheme was carried out in the grill room, while in the palm room an electric fountain, surrounded with Nephrolepis Scottii, small electric lights and snapdragon, was set in motion. In the large banquet hall, which was appropriately decorated, a big electric sign flashed the number "1908" while the guests were showered with cut pansies blown from the gallery through large electric fans, by Mr. Meiklejohn's assistants.

CLUB AND SOCIETY DOINGS.

NEW YORK FLORISTS' CLUB. The first meeting of the club for the year 1908, held on Monday evening, January 13, was one of the most interesting in a long time, the various matters coming up before the body necessitating a protracted session, which ended at about 11 o'clock. Ex-President Totty, on turning over the office of presiding officer to Charles B. Weathered, thanked the members for their forbearance during the past year. "The president of an organization," said Mr. Totty, "should sink his own personal likes and dislikes, and should always be guided by the majority of the organization. That course I have always endeavored to pursue." (Applause.)

Mr. Weathered, who received an ovation, then assumed the chair, thanking the members cordially for having elected him to the office. He sincerely hoped and trusted that all would support him during his term. He referred to the excellent work done by his predecessors, and said he would be glad, indeed, if his record at its close would measure up to that of those who had gone before him. He pledged himself to do his utmost toward the up-building of the club. One of the matters particularly emphasized in the president's address was that of the club securing a home for itself. He stated that this matter had been occupying the attention of the members for a very long period, and referred to an essay which he had read before the club and which was published in 'The Florists' Exchange' on July 18, 1901, in which he had then set forth his views on the subject. This securing of a permanent home had been delayed, not so much from the wishes of the members thereon, but simply from the fact that it had

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 23rd St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Delivers anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones, Prospect 2840 and 1065.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

EERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

been an impossibility to carry out the plan. Mr. Weathered was not in favor of any medal or other award being given to individuals for bringing in new members to the association, but rather would see 75 per cent. of the now available members present at every meeting. Another subject to which Mr. Weathered alluded was that of punctual meeting of the members at 7:30. This rule he would endeavor to specially enforce. He congratulated the club on its financial standing, and then took up the matter of the "canteen." He traced the story of this auxiliary of the club, which he said was instituted, not voluntarily, but compulsorily, conditional on the body securing one of its meeting places, many years ago. Then only beer and sandwiches were furnished, but now the members were not satisfied with these, but roast turkey, roast duck and other tit-bits in the culinary line were provided. It had become a great feature of the club, but it had also occasioned a great depletion of the treasury. He asked if it was justice to those members who, although ready and willing to do their part for the advancement of the organization, were often absent from the meetings, that those present should eat and drink up the funds? He stated that he would ask for a full discussion of this matter. Mr. Weathered then went into the subject of closer relations with the Horticultural Society of New York, touching on the trials and struggles of the club to maintain the position of eminence which the country demands of a horticultural organization located in New York, so far as regards its exhibitions. He was in favor of anything that would tend to evolve measures that would bring about what was quite evident was the greatest desire of the members to promote the grand work in which they were engaged.

Brief addresses were also made by Vice-President

Resolved, That as a mark of our great esteem for Mr. Hauswirth as a man and an official, and as an evidence of the great loss to horticulture which we feel his sad and untimely death has created, these resolutions be spread upon the minutes of this club and a copy of same sent to his bereaved family.

(Signed) F. H. Traudly, }
John Donaldson, } Committee.
John Birnie. }

President Weathered announced his committees as follows: Legislative—Patrick O'Mara, W. P. Sheridan and W. J. Stewart; Essay—John Birnie, L. Barron and B. Hammond; Award—C. H. Totty, Robert Simpson, H. Turner, A. Kennedy, F. H. Traudly, O. V. Zangen and A. Zeller; Exhibition—Jos. A. Manda, A. Jaenicke, Charles Lancker, S. S. Butterfield, John Scott, and J. B. Nugent, Jr.; Outing—W. E. Marshall, Charles Schenck, J. A. Shaw, J. A. Manda, C. Weber, D. F. Adams, R. M. Schultze, Louis Schmutz, Jr., F. A. Lord and J. W. Hiemels; Dinner—W. P. Sheridan, L. B. Craw, A. M. Henshaw, R. M. Schultze and W. E. Marshall; House—W. C. Rickards, H. Weston, G. Burnett.

Samuel A. Woodrow, John A. Rasbach, A. E. Wheeler and Thinsabura Suzuki were elected members, and the following gentlemen proposed: P. T. Barnes, J. Canning and W. A. Sperling.

The question of closer relations with the Horticultural Society of New York was then discussed by Messrs. O'Mara, Totty, Elliott, Marshall and others, with the result that the committee's report was accepted as one of progress and further conference with the committee of the Horticultural Society ordered. It was pointed out by Mr. O'Mara that the matter was one of friendly co-operation merely; there was no question of merging involved; each body would still hold on to its own course, but both might become united in the matter of

The president appointed as a committee to draw up resolutions of sympathy on the death of Victor S. Doyal, Woodside, L. I., Messrs. John Donaldson, J. A. Shaw and W. J. Stewart.

The matter of the annual dinner was then taken up and fully discussed by several members, it finally being decided that the usual course dinner, costing \$5 per plate, be held, the selection of a hotel to be left to the dinner committee.

The "canteen" came in for a goodly share of attention. A motion to limit the expenditure to \$10 per meeting and an amendment to eliminate the canteen entirely, were lost to an amendment placing the matter in the hands of the house committee with discretionary powers as to outlay. On motion of Mr. O'Mara the house committee was instructed to omit cigars and eatables from the items provided.

The president appointed a committee to obtain new rooms for the club as follows: John Young, W. P. Sheridan and J. K. Allen.

Secretary Young read a communication from the Baltimore and Ohio Railroad, stating that its rate to Washington would be \$7.55 for the round trip; tickets would be on sale on January 24.

A few remarks were then made by W. P. Craig and S. S. Skidelsky of Philadelphia and A. Farenwald of Hillside, Pa.

The committee on awards passed votes of thanks to Mr. Craig for his exhibit of Mrs. Jardine rose, which they were pleased to see again in such good condition. This rose is certainly a very attractive variety and found a host of admirers. Votes of thanks were also passed to A. C. Zvolanek for an exhibit of sweet peas, and the committee requested that John Lappe of Mas-

J. E. Jensen, Financial Secretary

Leonard Kill, President

Newly Elected Officers of the Chicago Florists' Club

Ed. F. Winterson, Treasurer

W. E. Marshall, Secretary John Young, Treasurer J. K. Allen, Trustees Hallock, Dukie and Rickards, all promising their best endeavor in behalf of the organization.

Secretary Young read the resolutions on the death of Phil. J. Hauswirth, secretary of the S. A. F. O. U., as follows:

Whereas, We the Members of The New York Florists' Club, have learned with profound regret of the death of Philip J. Hauswirth, Chicago, secretary of the Society of American Florists and Ornamental Horticulturists, which occurred on Wednesday, December 4, 1907. Be it

Resolved, That we as a body desire to express our most sincere sympathy with Mrs. Hauswirth and her family in their great and irreparable loss.

The late Mr. Hauswirth was well known to all of us and was an occasional and welcome visitor to our club. We admired him for his genial personality, and were deeply appreciative of his ever willing, untiring and unselfish labors in the furtherance of our and his chosen profession, the advancement of which he had so much at heart. His life work in our common cause was an example worthy of emulation by us all, in that he never shirked a duty that devolved upon him or refused to lend a helping hand when called upon in the carrying out of any undertaking having as its purpose the promotion of the common weal of our industry. This commendable faculty on many occasions necessitated much self-sacrifice on his part, but his magnanimity was such that he sank self-interest for the general good. And be it further

giving exhibitions in New York City. There was a general feeling among the speakers that none of the club's funds should be diverted for the purpose of securing associate membership in the Horticultural Society.

President Robert Simpson of the American Rose Society made a brief address telling of the forthcoming show of that body to be held in Chicago in March next, which he said would be one of the best in the history of the organization. He invited the members of the club interested in the rose to affiliate with the Rose Society, and to attend the coming show in large numbers. He spoke of the enthusiasm of the Western people in the work of the Rose Society, and was glad that the feeling at one time present, that the organization was simply an Eastern one, had now been dispelled. The Rose Society, in conjunction with the Horticultural Society of New York, would give an exhibition of outdoor roses in New York some time in June. It had been felt for a number of years that a show of this kind would greatly inure to the welfare of the Rose Society. Mr. O'Mara believed that a much wider field for that organization was presented by outdoor roses than by roses grown under glass.

The treasurer's report, read by W. E. Sheridan, showed a balance in the club's treasury of \$2,601.95.

path, L. I., show his seedling pink carnation before the club again, after which the meeting adjourned.

CHICAGO FLORISTS' CLUB.—The meeting of this club on Thursday evening, January 9, 1908, was fairly well attended. The most important business of the evening was the election of officers for the ensuing year, on the nominations made at the previous meeting. The election resulted as follows: Leonard Kill, president; George Asmus, vice-president; T. E. Waters, recording secretary; J. E. Jensen, financial secretary; E. F. Winterson, treasurer, and F. E. Bentley, J. F. Klimmer, August Pochmann, C. H. Fisk and H. N. Bruns, trustees. Installation followed, and short addresses were made by the newly elected officers.

The B. K. & B. Floral Company, Richmond, Ind., exhibited carnation Sarah Hill, a fine white; and Lawson Enchantress, a deep pink, similar to Rose Pink Enchantress. The committee on awards scored the former 88, and the latter 82 points.

The committee on arrangements for the meeting of the American Rose Society reported progress. The matter of quarters for the occasion was one under deep consideration, and a definite report, it was found, could not be made until next meeting. There were seven candidates for membership elected, viz.: F. R. Wiessgerber, Thomas McAllister, and R. S. Woodward, Chi-

engo; A. E. Longren, Des Plaines, Ill.; George R. Schumann, Hinsdale, Ill.; Geo. A. Kuhl, Pekin, Ill.; and Wm. J. Kimmel, Morton Grove, Ill., an excellent beginning for the year.

CONNECTICUT HORTICULTURAL SOCIETY. This society held its regular meeting in the County Building on Friday, January 10. President Huss occupying the chair. The newly appointed officers were duly installed and a program of the work for the coming season was outlined. Various committees were appointed and it was decided to hold a pansy show sometime during May. As we have a number of pansy enthusiasts in our community the success of the coming show is practically assured; as an indication that the exhibition will be on a considerable scale, John Gerard, the well known pansy specialist of New Britain, promises exhibits numbering at least 2500 pots from his district.

President Huss exhibited for the first time here *Mosehosma riparium*. This introduction from tropical South Africa promises to be of considerable value as a winter-flowering subject; the exhibit elicited much interest and was awarded a certificate of merit. Mr. Huss was also awarded certificates of merit for a fine collection of cut orchids and a specimen plant of *Reinwardtia irigynum*. A. J. Weber, gardener to Walter Goodwin, was awarded a certificate of merit for a well grown specimen of *Nephrolepis Whitmanii*.

It was resolved to hold dahlia and chrysanthemum shows in season and committees were appointed to prepare schedules for same.

President Huss presented the society a block and gavel made from the famous "Washington elm" which until a few years ago was one of the landmarks of Hartford. A. CUMMING, Jr., Secretary.

American Rose Society.

Secretary Benjamin Hammond, Fishkill-on-Hudson, N. Y., has distributed the schedule of premiums for the exhibition of the American Rose Society, and Spring exhibition of the Chicago Florists' Club, which is to be held in one of the best halls in the city of Chicago, March 25 to 27, 1908, inclusive.

Prizes are offered for classes of teas and hybrid teas, 25 blooms—American Beauty and Queen of Edgely, \$15 and \$10; and of \$10 and \$5 for the other varieties specified. In the class for 12 cut blooms the premiums for American Beauty and Queen of Edgely are \$8 and \$5, and for other sorts enumerated, \$5 and \$3. For 12 cut blooms the prizes are \$5 and \$3.

There are also classes for hybrid perpetuals, and for pot plants; in the latter class, a silver cup, value \$100, is to be given for general display of roses in pots or tubs, bush plants and climbers, covering not less than 100 square feet.

Several special prizes will be added to the list, and a supplement to the special prizes in Division F, will be issued later.

For information concerning the exhibition hall, address Philip C. Schupp, secretary Chicago Florists' Club, 37 East Randolph street, Chicago.

Society's Medals and Certificates for Novelties.

Gold medal for the best new rose not yet disseminated, whether of domestic or foreign origin. Exhibits to be judged by the official scale of the American Rose Society, and no gold medal to be awarded to any rose scoring less than 95 points.

Silver medal is offered at the same time and under the same conditions for a novelty scoring not less than 85 points.

A certificate of merit is awarded to all novelties scoring 80 points, but neither medal nor certificate will be issued until the variety is named, and 12 blooms shown.

It is further ordered that the complete scores of all the entries in the competition be filed with the Secretary of the American Rose Society before the award of any medal is confirmed. No duplicate medal will be awarded. It is understood that though the award of the gold or silver medal or certificate may be made to the same variety from one exhibitor exhibited in different centers, only one medal will be delivered to the exhibitor.

The Executive Committee of the American Rose Society reserves to itself the right of selection of the judges who shall pass upon the exhibits in the competition for these medals.

Scale of Points.

Table with 2 columns: Points of Value and Competitive Novelties for Classes Certificates, Etc. Rows include color, form, distance, fragrance, and distinctiveness.

All exhibitors not receiving prizes in one class may receive \$3 before placing in another class. The following special prizes are offered:

Division F. Special Prizes.

Fifty blooms, American Beauty, American Rose Society's prize, \$30.

The best display of cut roses of any variety, offered by Benjamin Hammond, the winner to hold the prize a year and on relinquishing it to compete for another competition at the end of the year. To receive a silver shield suitably engraved with the name of the winner having held the prize the longest, and the winner will be engraved consent given on the prize.

For outdoor roses in bloom in pots, \$200 cash for best prize, by Philip Hammond, Fishkill-on-Hudson, N. Y., also \$100 cash for second prize, by Arthur H. Roddington of New York City. For the best display of outdoor roses in pots, of tubs or bloom in garden, to consist of 150 plants, not more than two plants of one variety, each to be correctly labeled, but not to include all types and classes suitable for out-of-door planting.

Best display of Richmond, \$100 in gold, offered by E. G. Hill, Chicago, Ill. For the best fifty blooms of any variety of American origin now in commerce, a silver cup, value \$25, offered by Alexander Montgomery, Natick, Mass.

For the largest and most varied collection of cut roses of all classes, one or more blooms in a vase, the variety to count 65 points, a silver cup or \$25 in gold, offered by W. A. Mauld, South Orange, N. J.

For best twenty-five blooms, in Detroit, prize of \$25, offered by John Breidmeyer's Sons, Detroit, Mich.

The vase of roses showing the most artistic arrangement in the exhibition, \$25, offered by Welch Brothers, Boston, Mass.

For the prettiest exhibit, to be decided by three ladies visiting the Chicago show, \$5 gold piece, offered by Miss M. L. Hammond, Fishkill-on-Hudson, N. Y.

John Cook, Baltimore and His New Rose, My Maryland. Photo by F. Lautenschlager

Executive Committee Meeting.

The executive committee of the American Rose Society met at the Hotel Martineau, New York, on Monday afternoon.

August Poehlmann, Morton Grove, Ill., has been appointed special committeeman for the Chicago show. J. A. Valentine, Denver, Colo., will present a paper at the annual meeting upon "Roses in Colorado;" Adolph Poehlmann one upon "Practical Rose Growing," and William H. Elliott, Brighton, Mass., will give a paper upon the "Proper Size of a Greenhouse for Commercial Rose Growing." Mr. Elliott has the largest individual rose house in New England. Robert Craig, Philadelphia, will present a paper upon "Forcing Roses in Pots for Easter."

The following judges have been appointed, Messrs. J. P. Wilcox, Corned Bluffs, Pa.; Adam Graham, Cleveland, O., and John H. Dunlop, Parkdale, Ont.

The new rose, Mrs. Jardine, from Sharon Hill, Pa., will be one of the novelties on exhibition.

The secretary reported that many of the members had paid up their annual subscriptions within ten days from mailing the bills, and that the society needed as many as a thousand annual members, all interested. The details of the schedules had been attended to and the first edition had already been

... of the American Breeder's Association ... BEN O'NEILL, H. ...

American Breeders' Association.

The American Breeder's Association ... National Rules Hall, 218 G Street, N. W., and Carroll Hall, 228 G Street, N. W., Washington, D. C. The program has been issued by the secretary, Hon. W. M. Hays, Assistant Secretary of Agriculture, Washington, D. C., from whom copies may be obtained.

On Wednesday, January 29, from 2 to 5 p. m., a joint meeting of the American Breeders' Association and the American Carnation Society, under the auspices of the former body, will be held in the National Rules Hall, when the following papers will be submitted:

"Original Work Among Noted Roses," by W. Van Fleet, Little Silver, N. J.

"Some Observations in Plant Improvement," by A. M. Steele, Athens, Ga.

"Report of Committee on Breeding Roses," by Peter Bissell, Washington, D. C.

"Development of the Immune or Resist-ant Character in Plants," by H. E. Bobay, Fargo, N. Dak.

"Report of Committee on Breeding Carnations," by C. W. Ward, Queens, N. Y.

On Thursday, January 30, from 10 to 12 a. m., in Carroll Hall, reports of committees on various phases of plant breeding will be presented; and on Thursday afternoon, from 2 to 5 o'clock, in the National Rules Hall, there will be a joint meeting of the American Breeders' Association and the American Carnation Society, under the auspices of the latter organization, when papers on Carnation Breeding will be read and discussed.

On Thursday from 8 to 10 p. m., in National Rules Hall, an address will be delivered by H. J. Webber, Ithaca, N. Y., on "Gaps in our Knowledge of Heredity."

A reduction of fare and one-third, on the certificate plan, has been secured for those attending the meeting of the American Breeders' Association and the American Carnation Society, January 28-31, 1908, contingent on an attendance of not less than 100 persons holding certificates obtained from ticket agents at starting points showing payment of full first-class fare of not less than 75 cents on going journey.

Forcing Lilac Plants With Warm Water.

A new method of getting blue plants into bloom in quick time is given in a recent issue of the Gardeners' Magazine (December 11, 1907), which when better understood will take the place of etherisation. An example of a plant of the variety, Marie Legraye, that at the beginning of November was immersed in water for ten hours at a temperature of 95 degrees Fahrenheit, flowered in three weeks. Plants that were immersed for the same length of time in water at a temperature of 113 Fahrenheit showed, when taken out, a browning of the bud envelopes, developed slower at the first than the first-named plants, but came on rapidly when the pots were stood in a temperature of 95 degrees Fahrenheit, whilst a water warmth of 77 degrees Fahrenheit exerted no influence whatever on another plant subjected to it, as regarded its ability to force. It appears that for forcing purposes the most suitable temperature of the water lies between 95 degrees and 113 degrees Fahrenheit and that there is no necessity to keep to any special degree of warmth within this range. Etherisation of Marie Legraye did not prove so quick in action on the plants as the warm water method, but it had a great advantage over plants not specially prepared. The warm water exerted even greater influence on early blooming in the case of the variety Charles X. Horticultural Trade Journal, Eng.

William C. Barry, Rochester, N. Y., contributes to the Country Gentleman of January 2 and 9, 1908, very interesting articles on the subject of "How to Have Roses." Mr. Barry mentions some of the best varieties in each class for outdoor purposes, and gives practical instructions as to the culture and care of the plants. The other members of the American Rose Society should emulate Mr. Barry's example by furnishing similar articles to their local and agricultural papers. In no better way than this could the society create an interest in the flower it champions.

Secretary Hammond says the forthcoming show of the American Rose Society at Chicago will be "An exhibition of beauty for all the people, boys and girls, young men and maidens, father and mother, and all the grand-children of whatever creed or nation. Come see the roses."

Observations in France.

In the previous article I spoke of the public roads in France. These are a model for any country. One, that I shall mention as an example, the Bordeaux road, is a beauty. It is about 300 miles long. The driveway proper is, perhaps, eighteen feet wide, with a grassy promenade on each side, twelve feet wide, making the total width about forty-two feet. On the outside end of each promenade are planted tall poplars. At each side, at the extreme end side of the promenade runs a wide ditch. The roadway is hard as adamant, and perfectly even and smooth. It may be imagined that these roads are ideal for automobilizing, and that the American tourists use them for all they are worth for that purpose. To maintain the public roads, the government imposes a special annual tax of nine francs (\$1.80) on every male over twenty-one years of age.

* * *

I had to embrace an opportunity, of course, to see an agricultural fair in France. This happened to be one of the many held annually under the auspices of the Agricultural Society of France. I was curious to make comparisons of a European fair with the best I had seen of such exhibitions in America. The French have got them down, apparently, to perfection. The one I attended, that of the Department of Maine and Loire, was spick and span in every respect, clean, orderly and artistic in all its arrangements. The fair grounds covered about twenty acres. Everything in the nature of a circus as well as horse racing was eliminated. There were, of course, the usual displays of agricultural machinery of every description, of a great variety of up-to-date farm and road vehicles, of all sorts of wines, cheeses, incubators, monstrous vegetables, specimens of wheat, oats, rye, etc.; these latter with the head and straw intact.

The cattle exhibit was just great, so was that of the sheep, the pigs, the goats, the rabbits, the chickens, geese, ducks, turkeys, peacocks, pigeons, pheasants, etc. There were liberal cash prizes for all the various displays; for instance, in the cattle exhibit alone there were one hundred cash prizes, viz.: twelve first prizes of \$50, each, figured in American money; thirty-three second prizes of \$40, each; fifty-five third prizes of \$20, each, with a gold or bronze medal inclusive with each prize. Besides there were many "honorable mentions" as a prize of lower grade.

The floral show was under a square tent, about one acre in extent. The display of cut flowers was magnificent, embracing all the finest varieties of roses, anemones, lilies, fuchsias, geraniums, etc.

Pardon me now if I speak of what was to me one of the best exhibits of the fair, and that was an exhibit of the children's work. Life, we know, would be a dismal, dreary affair in any country without the children, and the delightful French cannot exclude the children, especially at such a time as a fair.

This exhibit consisted of a display of the progress made by the children of the public schools in manual training by the boys and in dressmaking and in house-keeping by the girls. In France, every child from the age of tothood up to graduation period is taught at school how to do things as well as the theory of them. Consequently, when a girl (taking her sex as an illustration) leaves school, she does so as a perfect little house-keeper. She knows how to make all her own clothes, how to make bread, how to cook the best dinner imaginable how to do all these things properly and perfectly.

Gardening is also taught in the schools, and the vegetables grown by the children are used when practicing their lessons in cookery. At the exhibition, which was in a building 150 feet wide by 600 feet in length, there were displays of the handwork of the girls in dressmaking, in underwear, in aprons, caps, and in every pattern or form of a dress, and one hour every day (the fair lasted eight days) the children gave exhibitions in cookery, handing around samples of their work for visitors to taste.

France holds agriculture of supreme importance, and its government endeavors to promote and foster the art ("The art of Kings" as Ruskin called agriculture) in every way it can. These ex-

hibitions, therefore, serve naturally as a great incentive in the practice of agriculture, every department of France giving a fair annually.

* * *

I found that the Eckendorf mangold-wurzels are more popular in Europe than the Long Red and Golden Tankard varieties are. These latter are the older varieties, and are the sorts which are generally grown in the United States. There are three kinds of the Eckendorf—white, red and yellow. The red is slightly the larger of the three. The yellow, however, is the most popular, especially in Germany, where under the name of Ideal, the seed commands a better price than that of any other variety of mangold.

The shape of the Eckendorf is not unlike that of the rounded torso of a well-formed woman; it does not require such deep soil as the other varieties; does not grow so much out of the ground as they do and is also easier to pull out of the ground.

A novelty in the mangold-wurzel world is the pale red or pink half-long sugar Ardennes. This is a cross between a sugar beet and a mangold-wurzel, originated a few years ago by Denaille & Son of Carignan. It is very large, half-long form, pinkish skin, flesh pure white. It is richer in sugar than any other mangold-wurzel on the market.

TRAVELER.

ADVERTISING in THE FLORISTS' EXCHANGE not only pays, but is far reaching. Messrs. R. Vincent, Jr. & Sons Co., of White Marsh, Md., this week showed us an order for geraniums received from a grower in Tokio, Japan, crediting the order to their advertisement in THE FLORISTS' EXCHANGE.

To have geraniums reach far-off Japan in good condition is somewhat of a proposition, but the Vincents, with their large experience in packing, expect to be able to deliver the goods in good shape for growing on.

PLANT CULTURE PRICE \$1.00. A. T. DE LA MARE PTG. & PUB. CO. 2 DUANE STREET, NEW YORK

CARNATION GROWERS

OUR issue for Saturday, February 1, 1908, will contain a full report of the meeting of The American Carnation Society, which is to be held in Washington, D. C., on January 28, 29 and 30, and carnation growers will find in that issue a most timely opportunity to place advertisements of either novelties or standard varieties that they may have to offer. Advertising copy should reach us not later than noon on Wednesday, January 29, or as much earlier as possible.

Plant Notes.

PANAX VICTORIANE. Panax is closely related to the aralia, which relationship and the close resemblance is very often the cause of the one being mistaken for the other. There is at times some difficulty in keeping such varieties of aralia as Veitchii (which is one of the best) in good condition as regards perfect furnishing of foliage for any great length of time after the plants have reached the specimen stage. This and their somewhat slow growth have noted in a manner calculated to prevent their cultivation being taken up on an extensive scale as their merits as high-class ornamental foliage plants deserve. Panax, especially the variety known as Victoriae, is nearly as decorative in appearance as some of the best aralias, and in its cultivation there is not the slightest difficulty experienced at any stage of its growth. This panax in small plants is very useful for florists' purposes in the way of filling, much in the same manner as pandanus and dracaenas of like size are used, and in its specimen state it makes a very handsome pot plant for greenhouse or other decoration.

Cuttings of panax put in the sand now will root in two weeks; these will make useful little plants by early Summer, while by Fall they will be hardy some specimens in 6-inch pots if they are grown on without interruption.

PROPAGATING CROTONS. — Everybody understands the necessity of bottom heat in the rooting of hardwooded plants such as crotons, but beginners may not be equally aware that in like degree heat is required to aid these plants in their endeavor to establish themselves in the soil in which they have been potted, when sufficiently rooted for that operation. Very often a great many cuttings that have been successfully rooted succumb very soon after being potted, when they are placed on a light, airy bench where neither sufficient moisture nor bottom heat was available for the stimulation of increased root action and the retention of foliage. All tender plants on being potted out of the cutting bench are more likely to thrive without check if they are, when potted, placed over a gentle bottom heat and sufficient shade afforded them until they are fairly well established. An ideal method of procedure is to put them in an enclosed glass case, or frame, until they are in such a condition that they will proceed to grow without fear of injury. When crotons are needed for outdoor bedding, the stock from which cuttings have been taken can be utilized for filling in, if there is a likelihood of a scarcity of plants for that purpose. Misting the tops of crotons is a satisfactory method of obtaining well-furnished specimen plants without having to wait for like results from rooted cuttings. There should be no undue haste in severing the tops.

ABUTILON SAVITZII.—There is none of the abutilons utterly lacking in merit; on the contrary it may be said that they are plants well worthy of cultivation, all of them, they are so easily grown and so unfailling to yield the best they are capable of with the little care required to produce them. The dwarf variety, with beautiful, almost wholly white, foliage, A. Savitzii, is especially worthy of cultivation because of the many uses to which it can successfully be put. For standing in conjunction with such things as alternanthera, lobelia, etc., in formal beds or other arrangements of planting, it is unsurpassed. When used in that way it needs no pinching to any great extent, but if it becomes necessary to stop it, pinching can be resorted to. This abutilon in recent years has been used in large numbers in public parks and cemeteries with much resulting satisfaction to all.

Now is a good time to go to work rooting cuttings of Abutilon Savitzii, so as to have a good stock of thrifty plants by bedding out time. Cuttings taken from stock plants and inserted in sand in the propagating bench will soon root and be ready for small pots. There will be no necessity of having the plants in pots larger than 3 or 3 1/2-inch at most at bedding out time; carrying them along in pots any larger is simply waste of time, space and material, if the plants are for close bedding.

ACALYPHA MACFEEANA.—Highly colored plants for outdoor planting are always in demand when the time comes for making use of them. Cobus and several other plants of like character

are largely used still and are likely to continue to be utilized to a considerable degree. There are occasions, however, when cobuses are not fully satisfying either in their nature or in the effect they produce; for instance, when taste runs in the desire for a border of colored foliage plants in front of shrubbery of an not passing judgment on the desirability of such a finish cobuses, because in so many respects dissimilar to the main planting, are considered out of place. In such a case perhaps there is nothing of high color and luxuriant foliage that equals Acalypha Macfearna, which has also in its favor the ability to stand against winds better than cobus and able also to stand in good condition outdoors later in the Fall.

In order to have good plants in 1-inch pots ready for setting out during the last week in May or the first in June, cuttings should be put in the sand now, of which there should be a number on the plants taken in for that purpose. If the cuttings are taken off with a heel and inserted in sand over bottom heat, they will root readily. When it is ascertained that the cuttings are fairly well rooted they should be immediately potted in good fibrous loam to which should be added a sprinkling of sand. Subsequent pottings should be done firmly without using much sand in the soil.

GYPSOPHILA PANICULATA. There are many useful plants that as such are either unknown to some florists, or that, by reason of their apparent commonness, appear to them so unimportant they give them little attention, whereas if they were grown once they would always find a place on a grower's premises. Prominent among such plants is Gypsophila paniculata. To the retail florist, who many a time has occasion for the hurried gathering and formation of an attractive bunch of outdoor flowers, the graceful blossoms and stems of this charming plant will be of much use and a source of pleasure to the recipient.

This is a hardy plant and can be used with satisfactory results for border planting and rock work, as well as for cutting.

One or more packets of seed should be procured in very early Spring and the seed sown in shallow pans or boxes. When the little plants are fit to be conveniently handled they should be potted up and kept growing until May, when they may be planted in the open ground.

M.

DREER'S SUPERB DOUBLE PETUNIAS

FOR half a century we have been making a specialty of **DOUBLE PETUNIAS** and our strain is accepted as second to none, either here or in Europe. We annually plant many thousand seedlings from which only the finest double fringed forms are selected for propagating purposes, thus improving the strain every season. We offer fifteen distinct varieties.

3-inch pots, 75c. per doz.; \$6.00 per 100. The set of 15 for \$1.00.
2 1/2-inch pots, 60c. per doz.; 4.00 per 100. The set of 15 for .75.

SEED OF OUR SUPERB STRAIN OF FRINGED PETUNIAS. Double, 75c. per 500 seeds \$1.50 per 1000 seeds. Single, 50c. per trade pkt., \$1.00 per 1-1/2 oz., \$1.50 per 1 oz.

Our Quarterly Wholesale List offers a full line of reasonable Plants, Seeds and Bulbs.

PUBLICATIONS RECEIVED.

THE PRODUCTION OF EASTER LILY BULBS IN THE UNITED STATES. By George W. Oliver, Plant Propagator, Bureau of Plant Industry, Washington, D. C.

A most interesting and instructive bulletin (No. 120 of the Bureau of Plant Industry, Department of Agriculture) has just been issued on the above subject, and gives the results of various tests made in this country in the growing of lily bulbs. Mr. Oliver points out in his introduction the great drawback experienced in the growing of Bermuda bulbs in greenhouses in the United States, occasioned by disease, in many cases from 50 to 75 per cent. of the plants being practically unsalable on that account. He states that it is not likely that American growers will be able to harvest the bulbs and place them on the market as early as the Bermuda crop, but judging from present appearances their efforts will result in supplying bulbs practically free from disease. It is said that about 3,000,000 bulbs are annually imported from Bermuda and that about 20,000 salable bulbs, ranging in size from three to five inches in circumference, can be grown on an acre of ground from mother bulbs planted the preceding year. The second year's crop of bulbs of that size, whether from seedlings or from bulbs, should therefore bring from \$1,000 to \$2,000 an acre.

Mr. Oliver says that the attempts made to grow the Easter lily commercially in the Carolinas, Florida and other States were useful in pointing out places where it was evidently impossible to produce bulbs cultivated after the manner now pursued in the Bermudas and Japan. Both large and small imported bulbs were planted at various places and received the best of care, but in every case the crop when harvested did not warrant a continuation of the experiments. All of these failures resulted partly from unsuitable soils, but principally from unfavorable climatic conditions. It is reasonable to suppose that the lily disease so prevalent in imported bulbs played its part in making the experimental work a failure. He states that the experimental work now being conducted on the Pacific Coast promises successful results, but even in that region, favored as it is with nearly ideal conditions in the matter of soil and climate, good results cannot be expected by following the old methods of asexual propagation practiced in the Bermudas. This has been shown repeatedly in connection with several large lots of selected imported bulbs planted out in widely different localities for seedling purposes. These plants show the usual amount of disease on the foliage, while the apparently healthy plants propagated by division and by scales also show the disease to such an extent that it seems a difficult matter to get rid of the trouble by purely vegetative methods of reproduction from selected bulbs.

A few years ago Dr. Albert E. Woods, of the Bureau of Plant Industry, in his investigations of the lily disease discovered that seedling plants were practically free from the disease. About the same time Mr. E. M. Byrnes, then connected with the Office of Public Buildings and Grounds, but now with the Bureau of Plant Industry, found that the progeny of crossed varieties were more vigorous than either parent.

At the instigation of Dr. B. T. Galloway, Mr. Oliver grew a large number of seedlings in the Department greenhouses, and from these several pounds of seed resulted. This was distributed on the Pacific Coast and in Florida. The seedlings grown in California showed conclusively that with liberal treatment first-class bulbs can be grown by this method much more quickly than by asexual propagation. The plants are almost free from disease. A few plants show it here and there in first generation seedlings, but in the second and third generation it is difficult to find an affected plant. These results have been so encouraging to practical men on the coast that several are now engaged in getting up a stock of seedlings upon a large scale.

The bulletin mentions the most suitable localities for lily bulb growing, and, although enough has not been done in an experimental way to ascertain all of the localities where lilies can be grown successfully, it may be stated that the lily seedlings have shown great vigor where the winter temperature does not fall below 24 degrees Fahrenheit. Below that point the plants get a check to

their growth and the foliage puts on an undesirable yellow tinge, which remains during the winter. The points where experiments have been made are Miami and Key West, Fla.; in the northwestern part of the State of Washington, in various points in California and at Brownsville, Tex., particulars regarding which we hope to publish in a later issue.

As regards the best varieties to grow, it is stated that during the past three seasons in California the best success has been with seedlings which were obtained by crossing the red-stemmed *Lilium longiflorum* giganteum with *Lilium longiflorum* Harrisii. The progeny is remarkably strong and in some localities totally free from disease. In the open fields they come into flower about a week later than the true Harrisii. These seedling lilies of the parentage mentioned are composed of four distinct types: Long-leaved and short-leaved, green-stemmed plants, and long-leaved and short-leaved red-stemmed plants. All show a remarkable freedom of bloom. Fred Rafferty of Santa Ana, Cal., bloomed a large number of them in the Spring of 1907. Although the seedlings were only about 3 inches high when planted out in June, 1906, some of them had twenty-eight flowers to a single stem in June, 1907. Two years ago at Ventura, S. Cole had some 2-year-old seedlings of the same cross, one of which had thirty-five flowers to a stalk.

On the farm of the Santa Ana Easter Lily Company during May, 1907, hundreds of plants had twenty or more flowers to a stem.

The only well-known variety which has been tried by the Department in California and Arizona is the Harrisii variety from bulbs imported from Bermuda in 1906. These bulbs were planted in order to produce seed after being artificially pollinated. All of the stock grown turned out to be more or less diseased and most of the plants, although grown from good-sized bulbs, produced very poor flowers and a very low yield of seeds. A small lot of this variety grown from seed has turned out fairly well, but by this method of increase there are several distinct types, showing that it can not be depended upon to produce plants true to the original type. It would seem, however, that many reliable growers in the East think there does not exist the same necessity for the Harrisii variety as an early former as there was a few years ago when cold-storage bulbs were comparatively unknown for early forcing. If this is true, then there is but little need for haste in getting the Harrisii variety into the American market, when in reality the bulbs should still be ripening in the fields. If the greenhouse men could use only the cold-storage supply for the production of flowers during the early part of the year, the fresh bulbs would then get an opportunity to ripen thoroughly before being taken from the ground. It would seem advisable to grow types from seed alone and propagate these for one or two seasons asexually, but only from bulbs and not by the scale method, using seeds instead of scales to increase the supply of bulbs. But when we have types which come absolutely true from seed there will be little likelihood of a necessity arising for saving even the smaller bulbs for replanting.

The seedling method of propagation not only has its advantages in so far as the elimination of disease is concerned, but it is also a much quicker method than propagation from scales or even from small bulbs. The seedlings one year after planting very often show as many as twenty flowers to the stalk. During the past season (1907), as already stated, Fred Rafferty of Santa Ana, Cal., had seedlings with twenty-eight flowers. Such plants can be depended on to give bulbs of salable size the first year. Comparatively few of the 9 to 11 inch size are produced. The usual sizes are from 5 to 7 inches, but a considerable percentage of the 7 to 9 inch size is found in lots which have received good attention. The crop is ready for harvesting by the beginning of August. The smaller bulbs when replanted soon after being harvested grow much better than imported material.

The seedlings now growing in California are principally crosses between the Harrisii variety and the dark-stemmed variety of longiflorum known as giganteum; others are straight Harrisii seedlings. The crosses are exceedingly vigorous and the Harrisii plants are also more vigorous than the parents, but less vigorous than the crosses. The plants

selected for bearing seed were apparently free from the disease, which manifests itself in spotted leaves, dwarfed growth, and distorted flowers.

In selecting ground for planting seed bearers it should be so arranged that lilies will not be grown on it for at least three years afterward.

The variations among the second generation seedling plants are easily recognizable. A batch of seedlings has usually four distinct kinds: Dark-stemmed (1) long-leaved and (2) short-leaved, and green-stemmed (3) long-leaved and (4) short-leaved. One kind is lifted at a time and kept separate for future propagation by division only, as it is scarcely worth while to employ the tedious method of scale propagation.

In addition to the foregoing information, the bulletin also gives instructions as to the preparation of the soil, beds versus rows, size of seedlings at the time of planting, the pollination of the flowers, sowing the seed, picking off the seedlings, temperature and precipitation in the Bermudas and temperature records of the lily-growing localities of the United States. Numerous plates, illustrative of the text, are also supplied.

We hope to refer more fully to this interesting document at another time.

Philadelphia.

Trade Notes.

This has been a quiet week in the florist trade. Business has no snap to it. There are lots of flowers coming in, probably not more than usual at this season, but the demand is smaller than ordinarily. Both grower and commission man have given up this winter as lost, as far as money is concerned; the only ray of hope is to try to finish the season without financial loss. The prospect of any profit vanished with the Christmas business.

The commission men report a falling off in shipping trade this week.

At the Pennsylvania Horticultural Society's meeting next Tuesday J. Otto Thilow of Henry A. Dreer, Inc., will give his illustrated lecture on "The Flora of the Yellowstone National Park"; the trade are invited to attend. This lecture was delivered by Mr. Thilow before the S. A. F. convention last August, but only in part, the time allotted not being sufficient to finish it.

John Welsh Young is recovering from an attack of typhoid fever; he was very low around New Year's, but is now gaining rapidly.

The past week one retail store had three orders for table decorations in yellow roses and found it very difficult to obtain the required quantity. No grower appears to grow *Perle des Jardins* in quantity around here. The roses for the above mentioned orders were secured in the upper part of this State.

DAVID RUST.

TORONTO. Business has been somewhat slow since the beginning of the new year, and stock has been rather light, but I fancy there are signs of doings soon that will brighten up trade again.

The funeral of Ned Hanlon, the great carman, called for quite a number of flowers. Most of our retailers have had a good share of funeral work, and all hope that general stock will be plentiful soon.

Roses and carnations are becoming more plentiful; and violets appear to be somewhat in oversupply. Some fair tulips are to be seen. Narcissus, Paper White, are both good and plentiful, but not much other bulbous stock is offered as yet. *Cattleya Triana* are coming in, and selling well. The Dale Estate are sending in fine *Lilium*, lily of the valley and *mignonette*; their carnations are also good. Albert Houle is again sending in fine Richmond roses, and is finding a good demand for them; indeed, his Richmond are running American Beauty hard in this market.

A. E. Jennings, one of our florists, has assigned for the benefit of his creditors; full particulars are not yet at hand.

THOS. MANTON.

A Good Paper.

It gives us great pleasure to pay to you this dollar for the year 1908 for that good paper, *The Florists' Exchange*. It is one of the best for advertising purposes, and that is worth more than the price when good results come from advertising. You will receive our advertisement of carnation cuttings shortly now; then all will be sailing good again.

ADAM LAUB & SON.

January 15, 1908.

Baltimore.

News Notes.

Remarkable weather conditions prevailed here a little while ago. It was loved by Spring-like weather, with an occasional thunderstorm accompanied with lightning and torrential rains which have washed park and county roads to a considerable extent.

Business conditions are good, and the fore men are busy making funeral designs. The Health Department reports a large number of deaths in the city's history, all due to the gripe epidemic.

J. H. Moss, nurseryman and florist will give a very interesting talk to the members of the Gardeners' Club on "Growing Specialties" at the next meeting. The meeting on January 13 was well attended. The question of holding a Spring show in connection with the National sculpture exhibition, which is to be held in April, was discussed.

The Bologna Seed case evinced considerable interest among local seedsmen; the publication of the details as printed in *The Florists' Exchange* is being highly commented upon.

Upon invitation of Mayor Mish of Hagerstown, Md., and the School Board of Washington County, C. L. Seybold, President of the Maryland Horticultural Society, was invited to address the annual meeting of the Teachers' Institute of Western Maryland, which held its convention January 6 to 11. Upon request Mr. Seybold addressed the Gardeners' Club on the same subject. His subject was, "The Extension and Development of School Gardens; and a More General Dissemination of Knowledge in Ornamental and Landscape Gardening. Notes and Observations on School Garden Work in Europe, and a Plan for Up-to-Date Public Gardens of Instruction, Arboretums, and Botanic Gardens, in Every Center of Large Population in this Country."

George O. Brown, honorary member of the Gardeners' Club, showed a large number of fine photos made by him. He had good park views and pictures of various florist's establishments (both indoor and outdoor views), all being very good.

C. L. S.

Chicago.

Horticultural Society Meeting.

A meeting of the Horticultural Society of Chicago was held at the Art Institute on January 14. Officers were elected as follows: W. E. Kelly, president; W. N. Rudd, first vice-president; Ernest Wienhoeber, second vice-president; N. H. Carpenter, third vice-president; E. A. Kanst, secretary; James H. Burdett, assistant secretary; Ernest Wienhoeber, treasurer; executive committee J. C. Vaughan, W. N. Rudd, August Pochmann, J. B. Deunnd, James H. Turdett, E. A. Kanst, George Asmus and Leonard Kell. A committee was appointed to nominate directors and report at next meeting. Five new members were elected. The society obligated itself to donate a thousand dollars to the guarantee fund for the National flower show and to present medals and prizes amounting to \$500. The treasurer reported a balance of \$5,227. Memorial resolutions on the deaths of P. J. Hanswirth and R. H. Warder were read and adopted.

Wm. Hagemann, New York, was in town.

The market continues dull.

J. H. PRINCE.

National Council of Horticulture.

There will be a meeting of the National Council of Horticulture at the Auditorium Annex, Chicago, Ill., at 10 a. m., January 22, 1908. The members of the council invite suggestions or questions on any topics which should properly come before that body. Plans for the press bureau service for the coming year must be worked out. It is hoped to make this a stronger feature than ever before. Other matters have been mentioned, and it is hoped that other lines of work may be instituted which will be helpful to the horticultural interests of the country.

H. C. IRISH, Secretary.

ORANGE, N. J. The New Jersey Horticultural Society will hold its annual smoker, Friday, February 7, at Elks Hall, 210 Main street.

New Carnation **DEFIANCE** Brilliant Scarlet

It is the only scarlet to grow for quality and quantity. Send us your order at once so as to secure February delivery.

\$12.00 per 100, \$100.00 per 1000. Usual Discounts on Larger Orders.

VICTORIA

NEW SEEDLING, crossed by Lawson and Harry Fenn, the color of Lawson and the long stem of Harry Fenn; it is more prolific than either. Lawson is past. Victoria is better than Lawson ever was, and gave us last Winter from 20 to 95 per cent. more blooms each month. It is very healthy and a nice grower. I have two houses of it, and it is a sight to see the buds and blooms. It brings more money in the market than Lawson. Read below what J. A. Budlong & Sons Company of Auburn, R. I., say of it. They are growing it this Winter. J. A. Budlong & Sons Company are one of the largest market gardeners in New England, also the largest rose and carnation growers in Rhode Island.

December 10, 1907.
 Mr. J. H. Cushing, Quiddnick, R. I.
 Dear Sir: We have 1175 plants of your new seedling Victoria carnation which we planted in house the last of July. They

Rose Enchantress		3.00	25.00

QUIDNICK GREENHOUSES

have made fine plants and we think now will produce as many flowers, if not more, than any carnation we ever grew. The stems are stiff and good length. The flower is also a good keeper.

We have sold these flowers in several instances to some of our best trade in Boston, who thought they were a long-stemmed Lawson.

Up to date, we have cut 4768 flowers from the 1175 plants, and there are as many buds in sight to-day as there have been any time since we started to cut. In other words, the cut has been very uniform and looks as if it would continue so throughout the Winter.

We do not think that you will make any mistake by putting this carnation on the market. Yours truly,

THE J. A. BUDLONG & SONS CO.
 Price of Victoria rooted cuttings, \$75.00 per 1000; \$3.00 per 100; 250 at 1000 rate.

REVIEW OF THE MARKET

NEW YORK.—Business in cut flowers is far from what it ought to be at this time of the year. Aside from some bulbous flowers, crops are by no means heavy, still, prices are on the downward grade and daily clearances are next to impossible. American Beauty roses do not seem to be at all plentiful, and at times 50c, each has been obtained for small lots; in quantity, 10c each was the ruling figure. In Bride and Bride-maid roses the shorter grades can be moved much more satisfactorily than specials and fancys. These conditions have prevailed for some time, and would indicate that the larger portion of the work being done in flowers is for funeral designs.

Carnations are more plentiful than they have been for some time, and there has been a marked decrease in prices, not only for the fancy grades, but for ordinary stock also, \$3 and \$4 per 100 is all that was asked for some of the best blooms coming into the city, and fairly good stock has been sold at from \$1 to \$1.50 per 100. Violets are not clearing out at all satisfactorily, and prices run anywhere from 35c. to 75c. per 100. An occasional special hundred find a buyer at \$1, but these are few and far between. Orchids are quite plentiful, and reasonable also for this time of the year. Cypripediums, particularly, are selling cheap; in fact, they have not been so low in this market for nine or ten years as they are at the present time.

The greatest glut is among bulbous flowers—Paper White narcissus and Roman hyacinths. On Tuesday Paper Whites were selling at ten bunches for \$1, and Roman hyacinths from 50c. to \$1 per 100. There seem to be a great many of these grown this season, and unfortunately, they are all arriving together at a time when there is very little doing. Lily of the valley of splendid quality is coming in, but is not realizing half of what has been the rule in former years at this time. Sweet peas have not become very plentiful as yet. Lilac, in bunches, is reaching the city regularly and brings anywhere from 75c. to \$1 per bunch. Smilax and asparagus are both too much in evidence just now; there seems to be a very little demand for them and prices have suffered accordingly. Tulips are coming in regularly, but as yet the stems are quite short, and the prices realized are from \$1 to \$2 per 100.

CHICAGO.—The dark and stormy weather experienced for many days has affected the market to a considerable extent. The supply of cut flowers is much above the demand, and prices have suffered in consequence. Violets have been closed out at almost any price, thousands of bunches going off at low figures, and slowly. Carnations are over plentiful, and considerable difficulty is experienced in moving them. Flowers to bring top prices must be of highest grade. Roses are fairly strong at quoted prices, and are not over-abundant. Bulbous stock is very plentiful. Roman hyacinths and Paper White narcissus drag considerably. Tulips are coming in freely, but as a rule are very short stemmed. Mignonette is a drug, it is of fine quality, but nobody seems to want it and much excellent stock is sold at a cent a spike. Cattycas hold their own at quoted prices, and are in easy supply. Cypripediums move very slowly. Shipping trade keeps up fairly well, although orders are somewhat light for the time of year. A cold spell, which started on Tuesday, may result in a much needed improvement in this market. J. H. P.

BOSTON. The flower market remains in much the same condition as last week. Short roses are not so plentiful and there seems to be a fairly good demand for them. Prices remain the same on American Beauty and high grade Richmond, Killarney and other roses of that type. Carnations are of splendid quality, there is quite a demand for the poorer or short stemmed grades. Lily of the valley sells well, as do sweet peas. Lilacs are plentiful, so are callas. Mignonette moves slowly. Smilax is about gone for this season. Bulbous stock is plentiful, but sells slowly. Violets are very plentiful and prices have dropped. J. W. P.

PROVIDENCE, R. I.—Business here for the past week was rushing on account of several large coming-out parties and funeral work. All kinds of flowers are very scarce. Carnations are bringing from \$5 to \$8 per 100; Bride, Bride-maid, Golden Gate and Killarney roses from \$5 to \$20 per 100. Bulbous stock is commencing to show up in small quantities.

Paper White narcissus fetch \$3 per 100; lily of the valley, \$4 per 100. Violets are more plentiful and sell for 75c. per 100. Hareish lilies bring \$1.50 per dozen. G. A. J.

NEW BEDFORD, MASS. Trade in cut flowers is about the same as usual; funeral work is very heavy, calling for large quantities of flowers. Carnations are coming in of excellent quality; they sell at from 60c. to 75c. per dozen. Some nice Winsor are arriving. Roses are bringing from \$1.50 to \$2 per dozen. Violets are rather a drug on the market just now, they retail at \$1.50 per 100. A few nice Sweet peas are seen; these retail for \$1 per 100. Paper White narcissus are now coming in regularly, bringing 50c. per dozen retail. A few tulips are in evidence; they bring 50c. per dozen retail.

H. A. John's new white seedling carnation, Loyal, is eagerly sought for at the Park street flower market in Boston. Mr. John also disposes of a great many of the flowers to the retailers in this city.

The regular monthly meeting of the Horticultural Society was held at the Board of Trade rooms on Monday evening, January 12, 1908, when the election of officers took place. The society is now in a flourishing condition.

E. Y. Pierce is cutting some nice carnations; his stock is in good shape. R. H. Woodhouse is cutting some nice Fair Maid carnations; for an all-around, free blooming and money-making carnation this variety is easily the favorite here.

We are having mild weather in this section. HORTHO.

NEWPORT, R. I.—The second week of the new year has always been noted for a dullness in business circles, of course, by the extraordinary activity of the two weeks preceding. The corresponding week this year would be no exception to the rule were it not that the funerals of several prominent people created quite a good demand for flowers. The prices ruling are about the same as flowers were held at around Christmas; the fact is that, locally at any rate, roses and carnations are not over plentiful. Bulbous stock in considerable quantity and variety is coming in faster than was expected in the last few days; if this kind of material continues to pour in, prices will go down very quickly.

Plants are moving slowly now, but we have no reason for grumbling, a splendid plant business has been done from the first of December until now. I think I forgot in previous notes this season to comment on the poor quality of primulas noticed here. These plants to be of any use, or even to be disposed of at any price, must be well grown. Primula sinensis is not one of the most serviceable of plants at best. D. M.

ST. LOUIS.—The wholesale market during the past week was overstocked with everything in season, the demand was light for colored stock and only fair for white. The retailers, too, complained of slow business in social work and that funeral orders only helped them out. There are quite a lot of wedding orders for this week that should use up considerable fancy stock. At the wholesale market this Monday morning more stock than is usual on Mondays came in. The prices are down. Fancy roses are selling as low as 36 per 100, for such varieties as Richmond, Killarney, Jack, John, Bride and Bride-maid, other grades run from \$1 to \$1 per 100. American Beauty, Emory long sell at \$4 to \$5 per dozen, others at from \$2 to \$3 per dozen, shorts, \$4 to \$8 per 100. Carnations have been cheap, the Emory grades sell as low as \$2 per 100 and \$10 per 1000, these are at their best in quality. Violets are down to 35c. and 50c. per 100 for the best California.

Bulbous stock has come in, and is very plentiful in all lines, and is selling at

a very low price. Roman hyacinths go at \$1 per 100, Paper White narcissus, \$2, and lily of the valley, \$2 and \$3 per 100. Callas run from \$10 to \$12.50. Smilax, galax leaves and asparagus have a good call.

Sunday and Monday we had a snow-storm and the weather has turned cold. Last week it was Spring-like, and the chances are that prices will advance by the end of the week, if not before.

ST. PATRICK.

Heating.

Growers' Problems Solved by U. G. Scollay.

We have one new greenhouse, 85x16 feet, 8 feet from ground to ridge, which we desire to pipe for hot water at present but with the intention of changing to steam later. We have plenty of 2-inch pipe. Can this house be piped so as to use the same arrangement for steam later as we would now use for hot water, and what plan would you suggest?

D. N. Co.

You can pipe your house so that it will work either steam or hot water, and the best way would be to have an overhead main at the highest point near the boiler, dropping to the far end and the coils under the bench dropping from the far end toward boiler. You would have to arrange, though, to have enough surface to heat the house by hot water and also place valves on various pipes to reduce the proper amount for steam. I do not advocate the plan. Use either a straight hot water or steam job. It will then be less complicated, and to your advantage. The amount of glass that you have at present would be best heated by hot water, and I would suggest putting in ten lines of 2-inch pipe for a temperature of 60 degrees. The 2-inch pipe will work very nicely with hot water, but I do not see any economy in using it for steam. Presuming that you intend to add a greater amount of glass later on and then use steam, I would suggest your laying out this house for hot water, and then when ready with additional glass write me and I will gladly advise you as to the changes and layout for your new steam plant. U. G. SCOLLAY.

Introducers and growers of carnations who supply the trade with rooted cuttings will find this a very favorable time for placing an advertisement in THE FLORISTS' EXCHANGE.

ASPARAGUS Plumosus, 2 in., \$2.25 per 100; \$20.00 per 1000.

CHANGES IN BUSINESS.

PALESTINE, TEX.—W. C. Hawkins, lately of Terrell, Texas, will engage in the florist business here and is now engaged in putting in extensive beds and greenhouses.

CASTLE, N. C.—The Horticultural Company has been established here to grow mainly evergreens, bulbs and seeds, also some fruit stock. Some fifty acres of land, well adapted for the purposes named, have been secured. Landscape gardening will form a feature of the firm's business. Adrian Van Leeuwen, Jr., landscape gardener, Worcester, Mass., is the senior partner of the concern, and H. H. De Wildt, of Holland, the junior member. Mr. Van Leeuwen will continue his landscape work at Worcester.

FIRMS WHO ARE BUILDING.

WOBURN, MASS.—Adam Foster is building two additional greenhouses, 100 x 50 feet.

ATTICA, N. Y.—Anthony J. Pauley is erecting two new greenhouses, one 200x26 feet, the other, 100x26 feet.

RUTLEDGE, PA.—Ernest F. Hanser, who recently purchased the greenhouses on Prospect avenue, is making preparations to build several additions to the houses and also to the dwelling house adjacent, in which he resides.

A COMPARISON OF COSTS

Is the cost of a one inch advertisement in every issue of *The Florists' Exchange* for one year, 52 issues. Total circulation, 369,200.

Is the cost of a three inch advertisement in every issue of *The Florists' Exchange* for one year, 52 issues. Total circulation, 369,200.

Is the cost of a six inch advertisement in every issue of *The Florists' Exchange* for one year, 52 issues. Total circulation, 369,200.

Is the cost of the *one cent stamp* required to mail 369,200 circulars, exclusive of the great additional cost of paper, printing, addressing, etc.

The advertisements in *The Florists' Exchange* are **ALWAYS** read. The circular generally goes into the waste basket, **without being read.**

Boston. The Week's News.

The first lecture of the season of the Massachusetts Horticultural Society was held on Saturday and was well attended. The subject was "The Concord Grape" by Wilfrid Wheeler, who handled it well, giving an account of early grape growing in Massachusetts and the gardens of E. W. Bull, the raiser of this fine variety.

Mrs. Lydia B. Manning, widow of Jacob W. Manning, died at her home in Reading, Mass., on the 9th inst. after a short illness.

Mrs. George Cartwright has gone to Los Angeles, Cal., to visit her son, who is a resident of that city.

A. H. Hayden of Marblehead suffered the loss of his entire greenhouse plant on the 5th inst. from fire; all his stock was destroyed and, unfortunately, he carried no insurance.

N. F. McCarthy lost a valuable horse from blood poisoning last week.

Mrs. William Sim has been on the sick list for the past two weeks and has been compelled to go away for a complete rest for some time.

H. M. Robinson & Company have on hand an extra fine grade of bronze galax this season. In their cut flower department they are handling quantities of lily of the valley of which they have an extra fine grade.

W. S. Manning, general superintendent of parks, Baltimore, Md., was in town this week attending the funeral of his mother. J. W. D.

PITTSBURGH, PA. The Pittsburg and Allegheny Gardeners and Florists' Club will conduct a competitive display of cut flowers and plants between members on February 4 in the German Benevolent Union Building, Sixth avenue. If it meets with success it will be made a semi-annual public event.

Washington, D. C.

Trade Notes.
Business has continued brisk on all sides; society dinners, marriages and banquets, with no small amount of funeral work, have kept the local trade busy. There is still a scarcity of home grown stock, but mild temperatures and daily increased sunshine are bringing on many buds.
The American Carnation Society opens its exhibition in the National Rifle's Armory on G street, January 28, to continue during January 29 and 30. At the last monthly meeting of the Florists' Club of Washington the following gentlemen were selected to take charge of the banquet on January 30, which will be held at Chas. Rauscher's, Connecticut avenue and L streets, N. W.; Peter Bisset, Geo. H. Cooke, Geo. C. Shaffer, John Robertson, Wm. F. Gude, P. C. Kramer and Charles McCanley. A large number of flowers are expected to be on exhibition; and with the above named committee in charge an excellent time is pretty well assured on the evening of the 30th. JAS. L. CARRERY.

NEW HAVEN, CONN.—At a recent meeting of the New Haven (Conn.) Horticultural Society the following officers were elected: President, John H. Murray; vice-president, Frank Duffy; treasurer, David Kydd; secretary, Walter Koella. The board of managers chosen are Thomas Pettit, Robert Paton, James Moore, James Bruce and Ernest Carrol. The report of the treasurer showed a very encouraging financial condition. A report was received from the committee which had charge of the last flower show, making it apparent that this exhibition was the most successful, from a financial standpoint, which has ever been held by the society. A syllabus will be made up at the next meeting of the speakers who will read essays at the coming meetings of the Winter.

CHICAGO, ILL.

Chicago.
News Notes.
The Voters League of Chicago has officially paid tribute to the honor of Peter Reinberg, the well-known florist, mentioning him as one of the city's aldermen whose integrity is beyond question.
Harry A. Bayersdorfer and Mrs. Bayersdorfer of Philadelphia have been spending a few days in this city, on their way to the Pacific Coast.
Paul and Henry Daileouze of Flatbush, New York, are registered at the Palmer House, and are busy visiting the carnation growers in this district. On Monday they visited the establishment of Jensen & Dekema to see Defiance in its glory.
E. F. Winterson is back at his post after a week's attack of the grippe, but is much concerned for Mrs. Winterson, who has a serious attack of the same malady.
F. J. Farney of the A. L. Randall Company has started out on a three months' trip.
C. B. Knickman, representing McHutchison & Company, importers, New York, is in town for a few days.
A. Irason, florist at 588 East Forty-third street, is receiving the sympathy of the trade on the death of his mother. He has left the city, accompanying the body to Dallas, Tex., where interment is to take place on Thursday.

St. Louis.
Florists' Club Meeting.
The first meeting of the club in the new year was held Thursday afternoon, January 9, at 2 o'clock, in the meeting rooms, 810 Olive street, and was largely attended, over thirty members being present, also a number of visitors. President William C. Young, who has been laid up with a bad case of grippe since New Year's, was on hand, and presided over the meeting in his usual happy manner. The trustees reported that they could not agree on the entertainment question.
The pottery committee, through Chairman Sanders, made a long report of what had been done at the meetings. After a lengthy discussion it was voted to put a subscription list in circulation, and over \$1,500 was subscribed at once. It was also decided that the list be open to all florists until May 15, by that time \$10,000 must be subscribed to organize a stock company to operate a pottery. Should this fail, the proposition will be dropped. The subscription list is in the hands of Chairman Sanders.
It was decided to hold our annual carnation meeting next month in the club's rooms; growers of new varieties will be asked to send some of their novelties for exhibition. The meeting will be held February 13.

J. E. Ammann of Edwardsville invited the members to attend the meeting of the Illinois Florists' Association, which takes place at Springfield, Ill., Tuesday, February 18. A good delegation has promised to go.

News Notes.
The St. Louis Horticultural Society recently held its annual meeting at the Mercantile Club. The society proposes to hold a Spring show in March.
L. Baumann, Chicago, was calling on the local trade the past week in the interests of florists' supplies. Mr. Baumann is meeting with good results on this trip.
F. J. Brown, proprietor of the Jefferson Floral Company, located at Jefferson City, Mo., was also a caller the past week. Mr. Brown has met with great success since locating in Jefferson City, having built quite a plant and will this Spring put up a few new houses. Some of these will be 200 feet and two 100 feet long. The company has just closed a \$4,000 contract for landscape work on which they will start at once. Their cut flower trade for the holidays was large.

John Burke was working overtime the past week with funeral orders. A very pretty carnation window display, including the last of the season's chrysanthemums, was seen.
Anyone wishing to subscribe for stock in connection with the proposed pottery can do so by calling at any of the four wholesale houses that have subscription blanks. After May 15 all will be taken up. For information regarding same, call up C. C. Sanders, who is chairman of the committee.

Our seedsmen, C. Young & Sons Company, St. Louis Seed Company, Plant Seed Company, Schisler-Corneli Seed Company are all making large preparations for a big Spring seed and plant trade.
Charles Schoenle's many friends will be glad to learn that his wife has recovered from her recent illness and will be at the store again next week.
Our four wholesalers, Messrs. Kuehn, Smith, Berning and Augermuller, say that stock was never more plentiful than it has been the past week, with prices on all grades away down. The best grades did not bring any more than the usual run of poor stock, so the second and third grades suffered greatly. The demand, too, was not nearly what it should be at this time of the year. White stock is moving better than colored.
ST. PATRICK.

ATLANTA, GA. A new company has been organized in Atlanta, composed of prominent Atlantans, who intend to engage in the business of planting citrus fruit groves, including oranges, lemons and grapefruit, in Cuba, and in addition the culture of the cassava plant for the manufacture of starch, glucose, tapioca and like products. Following are the officers: H. L. Collier, president; Dr. W. P. Nielson, vice-president; H. H. Cabaniss, secretary; Dr. J. H. Bradford, treasurer, and E. V. Carter, counsel.

The Week's News.

Many comments are heard these days about the unsatisfactory business conditions prevailing in all branches of the florist trade in the city. This is certainly going to be a season that will compare very unfavorably with several past years, and the burden will, no doubt, fall harder upon growers than it will on either wholesalers or retailers, as the cost of production is the same whether the product is sold at a profitable figure or not. However, if we are to believe the signs of the times, we have seen the worst of the business depression, and perhaps by Easter time the financial scare will have entirely disappeared and the public at large will be buying flowers as heretofore. Let us hope so, at least.

William Adams, florist, Great Neck, N. Y., died at his home there on January 2, 1908. He had been in business for many years, and was much respected by all who knew him.

P. T. Barnes, formerly on the staff of the Garden Magazine, is now with Suburban Life.

J. Hogan, Gravesend, N. Y., has sold his greenhouse establishment to Frank Manker, who has taken possession of the same.

The schedules in bankruptcy of J. M. Hodgson, florist, incorporated, of 718 Fifth avenue and Newport, R. I., show liabilities of \$26,480 and nominal assets of \$7,524, consisting of stock and fixtures, \$1,668; accounts, \$5,784; cash, \$22; wagon, \$50. The corporation owes \$15,760 to New York creditors and \$10,720 to Newport creditors. There are 170 creditors, among whom are the estate of J. M. Hodgson, \$2,290; C. F. Hodgson, \$1,224; A. W. Spalding, \$1,758; Mrs. Sarah Frances Spalding, \$1,806; A. J. Guttman, \$1,300; J. I. Raynor, \$1,412; and the Fifth avenue bank, \$300. There is due \$856 to employees for wages.

J. Cassidy, designer and builder of greenhouses, has changed his address from 6 Van Houten avenue, Jersey City, to Summer avenue and Erie railroad, Newark, N. J.

Among the guests at the marriage of A. A. Tharp to Miss Brenningger, which took place at Bedford Station on Wednesday, January 8, were Mr. and Mrs. John Nash of this city.

The ninth annual dinner of the Tarrytown Horticultural Society was held on Wednesday evening, the 15th inst., at the Florence Hotel, Tarrytown, N. Y.

Paul and Henry Daillouze have been spending two weeks in a tour of the West. They called at Cincinnati, Richmond, Chicago and other points, and are expected home in a day or two.

The convention of the American Carnation Society, which is to be held at Washington, D. C., January 28 to 30, 1908, should attract quite a crowd from this city, as the journey is a short one and there are a great many carnation enthusiasts in this neighborhood.

The largest social event for a number of years will be held in this city on the 27th inst., when the marriage of

Miss Vanderbilt takes place. We understand that the floral decorations for this affair have been placed in the hands of Wadley & Snythe, and it goes without saying that this firm will do full justice to them and put up as fine decorative work as is possible.

Visitors at the club meeting on Monday night were W. P. Craig and S. S. Skidelsky, Philadelphia; and A. Farenwald, Hillside, Pa.

Oswego, N. Y.

W. D. Stewart has completed a new house, 125x45 feet. It is a handsome structure and gives more room and facilities to carry on the business. The front end facing Cayuga street is used for an office. Mr. Stewart reports business good.

Mr. Workman has recently opened a city store that is in charge of his daughter; he finds it a paying undertaking.

P. G. Campbell reports business good. He was the first of the Oswego florists to make the venture of starting a city store and found it a paying investment from the start. Mr. Campbell is about to go into the seed business for which he is preparing his store. He will issue a small seed catalogue to begin with. On account of some repairing in the store the entire Christmas stock of plants was set in a vacant space between the store front and the sidewalk—solanums, palms, hyacinths, narcissus, primroses and araucarias made a fine show against a background of snow. The thermometer was 50 degrees in the shade; this was in Oswego and on December 25, a condition unusual for that section at that time of the year.

J. M.

Why Adam Ate the Apple.

At a recent banquet of horticulturists from all parts of the state, Eugene Secor of Forest City, Ia., banker, politician, legislator, poet, philosopher and horticulturist, recently told why Adam ate the apple. For the benefit of the horticulturists the prominent Iowa man put his thoughts in poetry. While he lands the value of the apple, it was not the fruit itself that appealed to Adam, for he had often seen it before. He says it was not a mark of weakness on the part of Adam not to refuse the fruit tendered by Eve. He said it was just what would happen to-day if there were perfect husbands and wives.

"I maintain that Adam was a model husband," he said. "He was the best of his time. It was a pleasure to comply with Eve's every wish. The honeymoon had not yet gone down on their matrimonial horizon, nor had it been obscured by a single passing conjugal cloud. He accepted her offerings with joy and in a spirit of loyal devotion characteristic of the newly wed. He didn't argue the matter. I don't suppose the word obey was in their marriage vows. She to him was the best woman on earth and he to her the only perfect man."

"'Tis said that Eve was fair and sweet. Her cheeks were like red roses When she induced her spouse to eat The fruit prescribed by Moses.

"Her voice was like a thrush's song. Her smile was most bewitching. Her easy grace the whole day long Kept Adam's heart a-twitching.

"Her temper was a model one— Was ever such another? She never sulked or longed to run And tell her biased mother.

"Would you have said 'No, thank you, dear,' If such a charming woman, Had offered you some tempting cheer— Some lurement of good omen?"

"Her gentle art first found the way Where knowledge dallied, sleeping; She was the first in Adam's day To practice light housekeeping.

"Don't censure Adam, he showed sense In bending to Eve's wishes. He saved his young bride some expense In labor, washing dishes."

Pittsburg.

Trade and News Notes.

Trade since the new year began has been fairly good; funeral work is very plentiful, the unseasonable weather which prevails causing many deaths, and some large and costly floral pieces were ordered for the funerals of several prominent citizens. Flowers are not any too abundant and prices hold up well; even bulbous stock is pretty well used up. Lilacs and sweet peas are in fair demand. We are now getting the first real wintry spell of weather, plenty of snow and quite cold; the thermometer dropped as low as 10 degrees above zero, the lowest so far this winter.

B. L. Elliott, who was manager on J. Bader's place the past season, has gone to California with his wife and expects to stay there for some time.

E. C. Ludwig was confined to the house for a week with a bad cold and ear troubles. Mr. Ludwig and family expect to leave for a visit to California at the end of this month where his son is spending the winter. All will return home before the Easter trade opens up.

D. A. Malie, a prominent florist in the North Side market, narrowly escaped death by asphyxiation last week. The gas fumes from the furnace came into his sleeping room, and had it not been for his sister who discovered his condition in time he would probably have succumbed; as it was, he was not able to leave the house for several days.

The meeting of the American Carnation Society in Washington will be well attended from our vicinity; about 8 or 10 members expect to go.

The January meeting of the Florists' Club was not so well attended as it should have been, but the inclement weather kept away many who missed a fine show and a good meeting. Nomination of officers resulted in a change of the presidency; Mr. Jones refused another term and Fred. Burki was named; for treasurer H. L. Blind takes Mr. Burki's place; and I. S. Crall, Monogahela, takes Mr. Burki's place on the executive committee. Otherwise the officers are the same as last year. The secretary was instructed to write to the secretary of the American Carnation Society that Pittsburg was willing to have the next meeting of the society in 1909.

The exhibits were as follows: From E. G. Hill Company, Richmond, Ind., Rhen Reid and Princess roses, White Enchantress, Sarah Hill and Afterglow carnations—a fine exhibit. Poehlmann Brothers Company, Chicago, Ill., showed some fine long stemmed Mrs. Potter Palmer roses. The popular new rose Mrs. Jardine came from Philadelphia growers. The Bakerstown Rose and Carnation Company, through Mr. Burki, staged Richmond, Killarney, Bridesmaid, Bride, Mme. Abel Chatenay, Perle des Jardins, Bon Silene and several other roses, making a fine exhibit. Mr. Meischke, Castle Shannon, showed a nice lot of assorted roses and Dr. Shafer a few cypripediums.

The next meeting in February will be carnation night and prizes will be awarded to the best grown on commercial and private places. The committees appointed are getting up a list for competition which will be announced in good time; and we hope this competitive display will prove a good feature for the Florists' Club, as it is the intention to hold several more of these throughout the year. E. C. REINEMAN.

Cincinnati.

Trade and News Notes.

Business remains medium, and stock received daily moves off nicely at fair prices. American Beauty roses are slower to move than the balance of the rose family. Carnations clean up daily at satisfactory values.

E. G. Gillett, wholesale florist, will move on January 22 to 114 East Third street in the Masonic Temple Building, where better quarters have been secured.

The next great event to take place in horticultural circles will be the meeting of the American Carnation Society at Washington, D. C., January 28 to 30, inclusive, in connection with the American Breeders' Association. I do not doubt that we shall be well received and that the meeting will be a good one; at least, we hope so. It is to the interest of every carnation grower, big or little, to become a member and attend these annual meetings. Make up your mind now to go to Washington, D. C.—a city itself well worth a trip to see.

THE WHILLDIN POTTERY COMPANY THE LARGEST MANUFACTURERS OF STANDARD FLOWER POTS

PHILADELPHIA, PA. LONG ISLAND CITY, N. Y. JERSEY CITY, N. J.

The financial crisis seems to have about spent its force. Very little script is now in circulation; collections seem easier, and people are once more resuming business with confidence. The florists appear to fare better than other lines of trade, and we hope business will continue to improve.

J. T. Herdegen, Aurora, Ind., was a caller on the 10th, and Henry Lodder, Hamilton, O., on the 9th; both report a good substantial Christmas trade.

Frances E. Linfoot, wife of Joseph Linfoot, College Hill, O., died at their residence at 1:20 p. m., Saturday, January 11, 1908, aged 60 years. The funeral took place on January 14 at 2 p. m. In the loss of his wife Joseph Linfoot, who is one of our esteemed florists, has the sympathy of the craft in this vicinity.

Trimble McCullough, son of J. Charles McCullough, was married recently to a young lady in California. The happy event took place while his father was out visiting him, and during this visit, Mr. McCullough and son ran over into Mexico on a little hunting expedition, bagging six hundred quail in six days, which shows that both are pretty handy with their guns.

William Cunningham, florist, whose place of business is on Ludlow avenue, Clifton, died January 12, 1908. He was one of the old-time craftsmen in Cincinnati. A widow and several children are left to mourn his loss.

Mrs. Gus. Adrian is quite sick, having undergone an operation which was not altogether a success; we sincerely hope she will soon recover.

Quite a number are suffering from la grippe, but so far I have heard of no serious results among the craft.

E. G. G

Cleveland.

Trade News.

The mild weather prevailing has increased all kinds of stock about 50 per cent. Carnations, violets, Roman hyacinths, and Paper White narcissus have slumped. Roses have held up in price better than other flowers. Longiflorum lilies and callas are rather scarce in this market and find ready sale.

Miss Louise Kline Miller, curator of Public School Gardens, intends to report a number of new ideas to the Director of Schools, Charles Orr, relative to improved gardening for the coming Spring. Simon Anderson is sending in about the finest Rose Pink Enchantress seen in this market for some time.

It is a treat to visit the plant of the Cleveland Cut Flower Company on Eddy road, East Cleveland, and see the fine shape in which the place is kept. President Buy Bate is a very earnest and diligent seeker after things horticultural and his knowledge is put to practical use, and where he can give it his personal attention.

That Cleveland is fast becoming a great wholesale flower center is shown by the number of new faces seen about the wholesale stores.

The F. R. Williams Company is sending in some very fine sweet peas, and W. J. Kramer a lot of very good Mrs. Lawson carnations. O. G.

Providence, R. I.

News Notes.

Tuesday, January 7, was inauguration day for the Governor, House of Representatives, Senators, High Sheriff, Secretary of State, as well as minor State officers, and was the occasion of another great display of floral designs and bunches of flowers. The State Capitol was very profusely decorated with palms and other plants.

William Hay is just recovering from a bad attack of erysipelas. Mr. Hay has commenced the building of his new plant at Oaklawn, R. I. He has broken ground for the construction of a new rose house, 300x43 feet.

Horticultural Society Annual Ball.

The annual ball of the Newport Horticultural Society was held Wednesday evening, January 8. A great many tickets were sold, more perhaps than for any like event held previously. Masonic Hall was well filled with dancers. The decorations were a revelation to all who had not a hand in their arrangement. The ceiling was gracefully covered and draped with Southern smilax, out of which peeped myriads of electric lights; the side walls were gorgeously draped with American flags relieved here and there with greens. The stage was artistically beautiful with palms and other choice plants. Taken all in all it was the most effective ball decoration seen in Newport in a long time. John T. Allan led the grand march with becoming accomplishment and dignity. His partner was Mrs. William Allan. Mr. Allan was ably assisted all through the evening by Mr. Conzlin and the rest of the committee. The ball was a decided success financially as well as in every other way. M

Trade Notes.

Now that this city has passed into its new era—that of being among the first class cities—we hope that with the greater developments in store for us a new era shall arrive in the florists' business. That the growth has immediately shown itself is evident in the fact of three new stores being opened here. Mr. Smith, Main street; Mr. Darling, West Main street, H. Brush, Clinton street; also that Thos. Cogger has leased a fine store corner Main and North streets; making a more desirable location than formerly.

Referring to the New Year's business, there seemed to be no let up in the orders, the Main street stores not being able to close until evening. A very large number of floral pieces and baskets were made up for the incoming Mayor and other officers, noticeable being the large number of special American Beauty, and violets by the hundreds. A number of Bon Silene roses and violet bouquets were used, these two making a very pleasing and acceptable combination.

Early French daffodils were in the market at New Year's, and their availability at that time was a pleasant addition to the cut flower trade. At \$4 per 100 these sold quickly and since the introduction of early tulips, the bulbous flower stock has started on its season with a good demand. La Reine and other tulips bring \$3 to \$5 per 100, Lily of the valley sells well. Carnations bring \$2.50 to \$4 per 100; roses, \$4 to \$10.

Azaleas are slow in coming into bloom although this is perhaps as well, as business is not so brisk in the plant line.

The city seems to be in the throes of the grippe, and numbers of people are forced to stay home from business. Numerous deaths have occurred.

LUCKNEY.

Detroit.

Trade Notes.

At present we are laboring under the influence of that yearly recurring quiet spell after the holidays. Stock is not coming in very fast although the weather was extremely bright and of a Spring-like temperature. Later we had a heavy rain which turned into snow.

Looking around among the principal growers at Mr. Clements we find some very good crops of roses, violets and carnations for the near future. John Breitmeyer's Sons are busy grafting roses to the number of 30,000 for this year's planting. Many of the standard carnations will not be propagated, but new varieties, such as Winsor and White Enchantress, will be very prominent in the propagating bench. La Detroit is still the local favorite for a Winter-blooming pink rose and more than ever will be benched this season.

Considering that we have only about six stores that depend on the wholesale business for supply it is interesting to note what a large trade can be worked up through judicious advertising and fair treatment. A few figures showing the Christmas business done by the Michigan Cut Flower Exchange, which is so ably managed by Robert Rahaly

For Greenhouses, Graperies, Hot Beds, Conservatories, and all other purposes. Get our figures before buying. Estimates freely given.

GLASS

N. COWEN'S SON,
 14 & 16 Wooster Street, New York

and his assistant, Albert Sylvester, may give an idea of the extent of its business. Christmas dealings included 20,000 carnations, 25,000 violets, 3,000 poinsettias, one-half a ton of boxwood, 250,000 fancy ferns, not to mention roses, stelia, moss wreaths and an endless lot of miscellaneous supplies. The weekly average of fancy ferns sent out by this house is 150,000. Last week was a banner one in this article; local and shipping orders called for 300,000. Their mainstay in carnations is White Enchantress; in roses, Kaiserin Augusta Victoria, La Detroit and Richmond. J. F. Sullivan has been confined to his room for a week with la grippe.

Phil. Breitmeyer is working into the night compiling his park and boulevard budget; it will be higher than ever, but Phil is a diplomat and the politicians know his value, and that is why he always gets what he needs.

Visitors: Messrs. Harry Heine and Thos. McGee, Toledo, O.; Charles Scott, representing Vaughan's Seed Store, Chicago. FRANK DANZER.

Johnstown, N. Y.

C. B. Knox has a fine range of greenhouses at this place. They were erected two years ago by the Lord & Burnham Company. The range consists of a handsome conservatory with curved roof and two wings about 100x20 feet. The benches, floors and all the inside work are of iron and concrete. The work room is of handsome hardwood finish and makes a well appointed range of the most durable qualities.

Philip Ulrich is the superintendent and combines the requirements of giving his employer a handsome conservatory and artistic home grounds in Summer, with the business end of disposing of his surplus stock at local sale, and otherwise occupies a prominent position in the local commercial market. One wing of the new range is devoted to carnations of which Mr. Ulrich has many good seedlings of his own raising. The other wing is in roses. Cold frames all filled with Easter stock were in abundance and a general line of stock for Spring planting for home use, as well as market, was all in good condition. J. M.

FIRES.

OGDEN, ILL.—A destructive fire in the greenhouses of W. L. Porter on January 3, 1908, did damage to the extent of \$3,000. The fire originated in the boiler room. There was no insurance.

MARBLEHEAD, MASS.—On January 6, 1908, fire in the greenhouse establishment of Ervin Haydon, Atlantic avenue, caused, it is thought, by a lamp having been upset by a cat, created a loss estimated at \$3,000, no insurance.

The Wise Gardener and His Son.

My son, attend unto the voice of thy father, and forget not his words, that it may be well with thee, and that thy garden may blossom as Eden, and thy trees bend with fruit.

Beware, O my son, of the jobbing gardener, for what is he but a delusion of the multitude, and a sore snare unto them that put their trust in him?

He prepareth his ground in the Autumn as one that looketh for the Summer heat, and breaketh up the clods thereof, for he regardeth not times nor seasons.

He bluntesth his knife upon the whetstone, and saith, "Now will I prune the trees of the field." He goeth forth as an army of locusts, and after him remaineth not any green thing.

As a lion among the flocks, so raveth he among the choice seedlings. He plucketh them up by the roots, saying, "Are they not weeds?"

He poureth strong manure upon the tender plant, and lo! it is not. Then saith he, "Surely some evil beast hath devoured it."

The tender plant fadeth for lack of moisture, and there shall none be given it. Yet, the flower pot shall become a dust-heap, and the inhabitant thereof as ashes.

Again, he maketh the flower pot a standing water, and the rock plant as one that dwelleth in the marshes.

Let a hurricane from the north fall upon thy borders rather than the jobbing gardener in his zeal. He is more to be feared than seven Spring frosts.

Be wise now, therefore, O my son, and flee thou from the jobbing gardener, for he hath destroyed many gardens.—Wellington (N. Z.) Mail.

How About It?
Are you going to put off the subject of building until next summer again? Why not talk it all over now and get the whole business all in good shape so that next spring when the first warm day shows up you can get right out and put up your greenhouse? No waiting, no worry, no loss of time and money. Mr. Florist, it is a common sense proposition - figure and order now, and build when you want to. We have time to give you careful, close attention now. You want the catalog first, so send for it today. Don't lock the door tonight unless you have written for it.

JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.
(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)
And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.
And then there is the cost to be considered. Why not let us take up this important question now?

IF you are going to build a greenhouse consult the pioneers in the manufacture of the stock. Cypress sash bars 32 feet or longer.

Burnham Boilers

FOR 1907

36% More Sold

THAN IN 1906

EVERY time you pay your coal bill, it jars you, doesn't it? Now suppose you felt sure that every pound of coal burned gave you the largest possible amount of heat returns and that you got that heat with the least possible attention—wouldn't you feel a lot freer in mind, to say nothing of the actual money you would make by the money you would save? Then why don't you get that kind of a boiler? A boiler that's built by greenhouse people to meet greenhouse demands—and meets them. A boiler that burns any kind of fuel without change of grate—that has all the latest improvements, from clinker door to damper regulator at the front. A boiler that had a better arrangement of the flues and channel for fire and smoke travel than the tubular; and all the quick heating and the enduring points of the cast iron boiler. A boiler with a fire that has no dead spots—a boiler that responds instantly—one that holds a slow fire when you want a slow fire held—a boiler that demands less attention, and does more for the attention you give it than any other boiler—a boiler that above all is one of economy—a real, genuine greenhouse boiler. If you need one, or going to need it, buy a Burnham now; then you'll have it.

VOL. XXV. NO. 4

NEW YORK AND CHICAGO, JANUARY 25, 1908

One Dollar Per Year

Winsor and White Enchantress

Strong Rooted Cuttings

Now Ready for Delivery

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere, and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. Order early, while we can promise immediate delivery, and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6.00 per 100, \$50.00 per 1,000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60.00 per 1,000.

Strong established pot-grown plants, \$9.00 per 100, \$75.00 per 1,000.

"Quality is remembered long after price is forgotten." What Quality Means.

Quality means the best and finest types procurable in their respective classes. We go to specialists for our flower seeds. Our customers, the florist, the private gardeners demand the highest grade. We have no cheap catalogue trade. "Quality" may mean a little higher in price. "Quality" in fact means "Quality" and we know that when you buy from us you get it, and our customers know it, too. Catalogues now in press. In pages. Write for one; it's free. We sell bulbs too.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION

George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendell, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

"PROGRESS IN LEGUME INOCULATION" is the title of Farmers' Bulletin 215 Department of Agriculture. It gives interesting accounts of results of actual experiments made.

HOLLISTER, CAL.—A. J. Pieters of the A. J. Pieters Seed Company left for the East this week, and expects to visit the seed trade in the interest of next year's contracts.

NASHVILLE, TENN.—The Nashville Seed Company is moving into the large warehouses at 215 North Market street, where it will have the exclusive use of 5,000 square feet of floor and concrete basement space. This firm has recently secured rights from the apple growers of Western New York for the sale of fancy New York State Baldwin apples in all territory south of the Ohio River. The company does an extensive business in field and garden seeds, fruits, vegetables and all the products of the farm.

CANADIAN SEED GROWERS' ASSOCIATION. The fourth convention of the Canadian Seed Growers' Association will be held at the Canadian Building, Ottawa, Ont., on February 3 and 4, 1908. The association is growing steadily in membership and is gradually coming to have a potent influence on the general agriculture of the country. The total number of members and applicants on the list at the time the work was inspected was 577. Since that time there has been a substantial increase in numbers.

LILY BULBS FROM JAPAN. A Japanese editor who has been enlightening his readers on the subject of exports of lily bulbs from Japan, and being of opinion that the bulbs were used as food in Europe and America, has been set right by Alfred Unger of Louis Boehmer & Company. According to the returns of the Department of Agriculture and Commerce the total value of the bulbs exported during 1907 reached 500,000 yen. The crop this season (1907) is expected to show some increase compared with the previous year. An increase of about 10 per cent. is expected in Kagoshima, where the lilies are cultivated in great abundance.

Mr. Unger points out that it is necessary that farmers should pay more careful attention to the culture of these bulbs, and endeavor to eliminate some undesirable and diseased types, which they deliver mixed with good types, causing great dissatisfaction among growers abroad and which will surely injure this trade in the future.

IMPORTS OF SEEDS, ETC.—January 13.—J. M. Thorburn & Company, one case seed. January 14.—Maltus & Ware, one barrel seed; Peter Henderson & Company, 44 packages grass seed; Vaughan's Seed Store, six packages seed; Weber & Don, 86 bags seed; R. P. Downing & Company, 39 bags seed; T. C. Pollock, one bag seed; A. T. Boddington, 33 bushels grass seed. January 15.—Stump & Walter Company, four cases bulbs. January 16.—L. & J. Spence & Company, 24 cases plants; Tice & Lynch, 161 packages garden seed. January 18 and 19.—H. Frank Barrow, one cask seeds; Stump & Walter Company, one barrel flower seeds.

ALFALFA IN BRAZIL.—An agriculturist in the state of Pernambuco, experimenting with alfalfa, has found that this grass will easily yield ten good crops per year in Brazil. Inasmuch as in the Argentine Republic the crop can be cut but six times per year and in Europe three or four times, it would seem that Brazil should be independent of the rest of the world for her fodder and hay. Yet in the year 1906 Brazil imported nearly \$700,000 worth of alfalfa, mostly from Argentina. The ease with which this fodder can be produced here and the high price obtainable should make it a profitable crop.

IRIS BULBS.—Protest of F. B. Vandegrift & Company, New York.—Dried iris bulbs which were classified under the provision in paragraph 251, tariff act of 1897, for "bulbs * * * which are cultivated for their flowers," are claimed to be free of duty under paragraph 548 as "drugs," or under other provisions of the free list. Assessment affirmed. The following opinion was rendered by Waite, General Appraiser * * *. The iris is a well-known flowering plant. See "Iris," International Encyclopedia. From some varieties of this plant is produced the orris root, known to the drug trade. We think, however, that the orris root of commerce is the root of the iris plant after being scraped and prepared for the trade, which destroys the germinating principle. We are unable to learn that the root in such form as imported in this case is known or dealt in by the drug trade. There is some evidence in the case which tends to show that this particular importation was brought in for the purpose of planting and raising the orris root for medicinal or drug purposes. We do not think, however, that the use of the merchandise after importation should govern. It will be noted that the language of paragraph 251 is, "which are cultivated for their flowers." We think the iris roots are cultivated for their flowers, and the fact that they may be diverted to another use can not vary the assessment upon importation, the commodity not being in shape or condition to be used as a drug or by those dealing in druggists' materials. It appears from the evidence that these plants at the time of importation were in a condition to germinate and grow. If the bulb may be used either to plant for flowering purposes or to raise a product intended for ultimate conversion into a drug, it can not be said, therefore, to be dutiable under paragraph 548.

The following view expressed by the Board in Abstract 12933 (T. D. 27636), is pertinent to this case:

Some stress is laid upon the fact that the United States Dispensary refers to asparagus as having reputed medicinal qualities and to pumpkin seed as furnishing a remedy for tapeworm, but this can not be the test. Many table vegetables, or the plants or seeds producing them, contain medicinal principles and are mentioned in the Dispensary, such as lettuce (18 ed., p. 772), celery (p. 1569), potatoes (p. 487), tomatoes (p. 488), beans (p. 1764). It would be opposed to common knowledge and sound construction to class such articles as drug unless the particular substance imported was of such variety, quality, condition, or stage of growth as to be unfit for its common use and to be adapted to the uses of the drug trade. This was true of the celery seed held to be a drug in *Clay v. Magone* (10 Fed. Rep. 230), which was not in such condition that it could be sold for planting purposes. We conceive that it might also be true of lettuce after it had reached the period of inflorescence, when it is unfit for food and yields the drug known as lactucarium (11, S. Disp., 18 ed., p. 772).

The claim that the goods are free under the provision for textile grasses

and fibers in paragraph 566 is plainly untenable, as is also the further claim under paragraph 617, which applies only to vegetable substances similar to moss and seaweed.

HEMPSTEAD, N. Y.—Mr. and Mrs. Francis Brill celebrated their golden wedding anniversary at their home, 56 Washington street, this village, on January 1, 1908. Owing to the failing health of Mrs. Brill, a formal reception was dispensed with, and the event was quietly celebrated, immediate members of the family participating.

On January 1, 1857, Francis Brill and Ann Elizabeth Macdonald, daughter of the late David Macdonald of Newark, N. J., were married, the Rev. William T. Eva, officiating. Mrs. Brill's grandfather, Robert Macdonald, was one of the early settlers of that part of Newark, N. J., known as "The Neck," and was identified with the growth and development of that thriving city. Mr. Brill is the youngest son of the late John Brill, one of the leading horticulturists of his day, who for many years conducted an extensive and thriving market garden and florist establishment in Jersey City, and later, in Newark, N. J., up to the time of his death in 1870. Here Francis Brill received that training which, combined with his executive ability, keen observation and personal experiments, in after years led to his being recognized as one of the leading seed experts in the country. In the year 1870 Mr. Brill moved with his family to Mattituck, in Suffolk County, where he established a seed farm, and largely through his efforts in developing and perfecting the cauliflower, blazed the way for the extensive cauliflower industry that has made that section of the Island famous all over the country. From Mattituck Mr. Brill went to Riverhead, and after a few years removed to Hempstead, where he has since resided, and carried on his seed business. Wherever they have resided, Mr. and Mrs. Brill have taken part in every good work for the advancement of the interests of the community, while Mr. Brill has been prominent politically, and is still interested, as a good citizen, in public affairs. In 1876, while a resident of Mattituck, Mr. Brill was elected on the Democratic ticket as a Member of Assembly from Suffolk County. For several years he served as town clerk of the town of Hempstead, in both positions serving the people's interests. Nine children have been born to Mr. and Mrs. Brill, five of whom are still living. They are Walter A. Brill, Mrs. John S. Nichols, Jr., Mrs. Louis F. Huleu and Miss Minnie A. Brill, of Hempstead, and Katharine A., who a few years ago married Walter Bodger, a member of the firm of John Bodger & Sons, extensive seed growers, of Gardena, Los Angeles County, Cal.—Hempstead (N. Y.) Inquirer.

HELLER & CO., MONTPELIER, OHIO, U. S. A.

HELLER'S MICE-PROOF SEED CASES.—W. E. Heller & Company, formerly of Montclair, N. J., now of Montpelier, O., make a specialty of mice-proof seed cases, have visited all of the leading seed houses in the United States and Canada, and are now producing something that is practical and modern, in their special line, which for its efficacy is endorsed by thousands of seedsmen all over the world.

Seed Trade Notes.

The passing of the last few days has started in very earnest the larger wholesale seedsmen on filling their first crop of advance trade orders for the season of 1908. As I have from time to time stated I expected, the sellers of seeds throughout the country as a whole are placing their first early orders much sooner than has been the case in years, and this fact will render the balance of this month and the first half of February the most active and profitable to all concerned, in many seasons. This week has seen the first issues of the florists' and market gardeners' catalogues, and in connection with this the mailing of our largest retail catalogue editions of practically all the most prominent mail order houses, has given to every branch of the horticultural trade an impetus which will not again be lost until the seed-selling season of 1908 has become history only. I do not look for the mail trade in seeds to exceed the average during the next four weeks, but I shall be very much disappointed if the seed wholesalers do not have the largest business in years before Washington's birthday.

There is a subject that has interested me exceedingly for years; I can say, in fact, that I have made an exhaustive study of it in connection with seed cataloguing work; I refer to the matter of purchasing other seedsmen's novelties and specialties in flower and vegetable seeds for listing and prominently pushing in our own seed catalogues. I am very glad to see that a few remarks of mine in this column on this subject have been taken up for a further discussion by the English trade papers, as

I do most earnestly feel that nothing but good can come to the seed trade, both here and in Europe, from a full and exhaustive threshing over of this matter. My contention is simply this—that our seedsmen cannot as a business proposition afford to pay the rates that have ruled for years for seed novelties and specialties; namely, 25 per cent. off the retail rates on European introductions in packets; and with us not, as a rule, exceeding 33 1-3 per cent. I say cannot afford to pay what have for years been considered "going rates"—that is, if we are to recompense ourselves adequately for the space taken in our seed catalogues for listing such annual introductions, and also for the added expense of the distribution of such seed novelties and specialties to the general buying public. I will take no more space regarding this subject at the present time, but every seedsmen should give this most important matter his earnest consideration. Catalogue space costs money.

It has several times come into my mind during the past week how thoroughly interested in my poor writings "Statistician" must be, to have a fortnight ago so carefully prepared the very comprehensive estimates of the "Cost of Seed Catalogues." I can assure him that "V." and The Florists' Exchange as well, appreciate and value such readers; it is thus, and only by a free interchange of views (no matter how much we may individually differ in opinions on any given subject), that this paper can hope ever to reach its highest ideal of doing the greatest good to all in its chosen field.

Now that the first wholesale orders of the year are being freely placed with our larger seedsmen, it has at last become very apparent just where the shortages of seeds are—and to what extent. It will, I am sure, prove of interest at this special time to touch briefly upon the most acute seed deficiencies with the present market values for these much sought for seeds. Sweet corn I have previously touched upon; the early varieties are comparatively plentiful; it is such sorts as Stowell's Evergreen, Country Gentleman, and the other popular late sweet corn varieties

that are now worth \$5 to \$7.50 per bushel. Dandelion seed is very short in supply; this, of course, is a seed that many of us sell only in quite limited quantities, but you will find it billed to you this season at about double the usual rates; the best strains of French-grown dandelion are to-day held at \$2.50 to \$3 per pound.

As regards onion seeds, the following memorandum of rates very fairly represents the feeling among the wholesale trade at the present time: White Globe Southport, \$3 to \$3.75, and only very limited quantities obtainable at any price—the seed does not exist; White Portugal, say \$3; the various strains of Yellow Danvers, \$1.50 to \$2.25; Red Globe Southport, \$1.75 to \$2.25; Red Wethersfield, \$1.75 to \$2.25. These prices per pound I feel very nearly express the present situation, but all but very much favored regular customers of the larger seedsmen will find, if they should try to buy any considerable quantity of onion seed, apart from a full line order (so-called), that the outside prices I have named above might indeed in such a case look very low. Egg plant in the most popular varieties is very short this year; the best strains of New York Purple are firmly and closely held for \$3 to \$4, and even more per pound. Other varieties are very much higher than is usual, following the lead of the favorite sort just mentioned. But in respect of its varieties, egg plant is very peculiar; there are some dozen or more good sorts, but outside of the best strains of the New York Purple very little seed comparatively is sold. Many varieties of beans are worth from 50c to \$2 or even more per bushel than last year; a few popular sorts of Lima beans seemingly showing the greatest advances.

As regards garden peas you will here find also advances over last season of from twenty-five cents to \$2 per bushel; there are a few (very few) sorts that for some unknown reason gave such good seed crops that they can be purchased at even less than last year. The American Wonder pea is one of these varieties, and as it is one of our very best sorts for the family garden no variety could be pushed to better advan-

tage to the seedman or more real satisfaction to the customer.

Truly this is going to be a year when the greatest ingenuity will have to be exercised in order, first, to satisfy the customer as regards price, and, secondly, to make a few dollars for ourselves. There are many other seed shortages besides the main ones I have so briefly mentioned; but of these more anon.

I have been much interested, and have watched the columns of The Florists' Exchange closely, for a report of the outcome of the various societies in New York—the Florists' Club, the Horticultural Society of that city, and the other organizations, that propose in some way to found a society of horticulture in New York that shall have a solid standing among the kindred organizations of the world—a society whose doings and prize awards shall be the highest authority in this or any other country. Such a consummation of horticultural efforts is greatly to be wished. May success attend the plan.

We are still having the most beautiful open weather, but it is not seasonable; we need snow.

European Notes.

A brief break with very moist Summer-like conditions has been followed by a further spell of severe frost with heavy falls of snow; the latter will minimize the effect of the keen winds that drive the life out of every living thing. Quite a rush of clearing up shipments have been made by steamers leaving European ports this week. The reasons for this exceptional delay have previously been fully set forth in these notes. Some of the larger and more fleshy kinds of peppers are not yet matured; the germination of seed sowed under such circumstances is bound to be unsatisfactory, and short deliveries will be a blessing in disguise.

The opening of the new year has caused a stir in the clover seed market. Alfalfa has taken a further leap upward, now it is quite certain there will not be any late crop seed forthcoming from Provence.

Red clover has advanced in value even more rapidly; some samples of year-

ing seed that were worth 60 shillings at this time last year were easily sold at 110 shillings on Monday last, and very inferior samples of new crop seed realized 74 shillings at the same market. If this advance is maintained the plucky holders of yearling stocks will coin money.

White clover is reported to be more abundant and is quoted at reasonable prices.

Rye grass has gone up by leaps and bounds, and is now nearly out of sight. Natural grasses of every description rise in sympathy.

Arnold Moss, late head of Jacob Wrench & Sons, after lying practically helpless for some months, as the result of a stroke of paralysis, died on New Year's Day. A capable seedsman and a thoroughly whole-hearted fellow, he was beloved and esteemed by all who came into contact with him, and his many friends among the seeds-men on your side will grieve at the loss of a dear, personal, true friend. Of the causes which led to the decline of the Wrench business, after an honorable existence of 150 years, this is not the time or place to speak; it is sufficient here to say that neither Mr. Moss nor his predecessors could honestly be charged with doing a mean thing.

The business of A. & E. Moss, established after the closing up of the Wrench Company, is being carried on by E. Moss, the son.

C. H. Curtis, secretary of the National Sweet Pea Society, has written a booklet on "Sweet Peas and How to Grow Them," which is published by W. & L. Collingridge, proprietors of The Gardeners' Magazine and other well-known papers. The booklet can be had for one shilling plus postage. The date of publication of the Sweet Pea Annual and schedule is announced for January 14.

The statement in your Chicago contemporary that, under the Corrupt Practices Act recently passed in England, a small discount of probably 5 per cent. is permitted will be news to the framers of the law and to British traders generally. The fact is that no exemption whatever is permitted. The act applies to all businesses alike.

Burt Olney, president of the Burt Olney Canning Company, Oneida, N. Y., has been in London during the week and left for New York per "S. S. Mauretania." EUROPEAN SEEDS.

CATALOGUES RECEIVED.

TREVILLE NURSERY COMPANY, Powell Station, Tenn. Price List of Apple and Peach Trees.

FRANK E. RUE, Peoria, Ill.—General Catalogue of Seeds, Bulbs, Plants, etc., with special collection offers. Illustrated.

ALBERT SCHENKEL, Hamburg, Germany—Illustrated Catalogue of Seeds and Plants; printed in the German language.

THE W. W. BARNARD COMPANY, Chicago. Market Gardeners' Price List of High Grade Vegetable Seeds and Gardening Tools. Illustrated.

CALIFORNIA ROSE COMPANY, Pomona, Cal.—Illustrated and Descriptive Catalogue of Field-grown Roses. Open ground culture exclusively is practiced by this firm. An embracing and interesting collection.

HENRY SEXTON ADAMS, Wellesley, Mass.—Illustrated Catalogue of Choice Seeds, Bulbs, with lists of Novelties and Specialties. Nasturtiums form a feature of the latter. A Handy Vest Pocket Catalogue.

W. W. WILMORE, Denver, Colo. Catalogue of Dahlias, Gladioli, Peonies, Hardy Plants, etc. Illustrated; also Trade List. Dahlias form one of Mr. Wilmore's specialties, interesting lists of Novelties and Standard sorts being furnished.

H. H. BERGER & COMPANY, New York—Wholesale List of Seeds, Bulbs, Plants, etc., for Spring, 1908. Illustrated. An interesting feature is the list of Japan importations, such as Peonies, Cherries, new Hydrangeas, Camellias, Maples, Azaleas, Wisterias, Magnolias, etc.

SHEKMAN & EBERLE, Albany, N. Y. Illustrated Catalogue of Vegetable, Grass and Flower Seeds, Bulbs, Roses and other Plants, Horticultural Supplies, etc. with a well-known list of Novelties and Specialties. An attractive and neatly printed catalogue.

Ageratum

Table listing various flower seeds including Ageratum, Alyssum, and Begonia with prices per packet and ounce.

Lobelia

H. W. VAN DER BOM & COMPANY, Oudenbosch, Holland (J. Meerkamp Van Embden, 213 Franklin Avenue, Mount Vernon, N. Y., American agent)—Catalogue of Forest and Ornamental Trees, Spring-flowering, Forcing and American Plants, Conifers and Evergreens.

ELMER D. SMITH & COMPANY, Adrian, Mich.—Wholesale Catalogue of Chrysanthemums, new and standard varieties, and Asters. Mr. Smith is now devoting all his time to these two specialties. The catalogue is replete with offerings of the different types of Chrysanthemums, and is profusely illustrated. This firm succeeds the well-known house of Nathan Smith & Son.

BURNETT BROTHERS, New York. Catalogue of Vegetable, Field and Flower Seeds, Bulbs, Roots, Plants, Fruit Trees, Small Fruits, Tools, Implements, etc., with carefully selected lists of Novelties and Specialties. Profusely illustrated, with attractive cover designs. A neatly printed catalogue, creditable alike to the makers and to the enterprising young firm distributing it.

YOUNG'S SEED STORE, St. Louis, Mo. Catalogue of Seeds, Bulbs, Plants, Fruit Trees, etc., including a list of New and Rare Plants. The catalogue is fully illustrated, and has very attractive cover designs, embossed in color, showing pretty representations of Dahlias, Asters and Pansies. There is also a fine colored insert depicting

DREER'S Reliable New Crop FLOWER SEEDS

We offer below a short list of items which should be sown early. For a complete list see our new Wholesale Price List Free on application to all Florists.

Table listing various flower seeds including Centaurea, Lobelia, Mimulus, and Petunia with prices per packet and ounce.

Dreer's Double Petunia

Table listing various flower seeds including Salvia, Thunbergia, and Verbena with prices per packet and ounce.

Salvia Bonfire

We offer a fine line of Asters, Sweet Peas, Antirrhinum, Cosmos, etc. etc. Our list of Novelties contains many good things for Florists, all of which are fully described in our Garden Book for 1908. Copies on application.

HENRY A. DREER 714 Chestnut St., PHILADELPHIA

Roses Miss Kate Moulton, Souvenir de Pierre Notting, Snowdrift and Cherry Pie.

COLE'S SEED STORE, Pella, Ia.—Illustrated Catalogue of Garden, Farm and Flower Seeds, Sundries, etc., with a list of Novelties and Specialties. Mr. Cole says: "The crop of seed harvested has been on an average only fair the past season. Many items are very short, especially Onion Seed, Sweet Corn, Peas, Clover and some varieties of Potatoes and Grass Seed. Prices of such will rule somewhat higher than last year. Most other seed stocks average in price as low as last season."

JOHN LEWIS CHILDS, Floral Park, N. Y. Illustrated Catalogue of Vegetable and Flower Seeds, Bulbs, Plants, etc. with a comprehensive list of Novelties and Specialties. Gladioli form one of Mr. Childs' specialties, some 200 acres being devoted to their cultivation. The variety "America" is designated as "A full moon among a sky of stars." The nursery, seed and bulb gardens on Long Island aggregate almost one thousand acres; and the concern has also a place of considerable extent at South Pasadena, Cal. The postage account on the firm's catalogues amounts to about \$30,000 annually; this will give an idea of the extent of the business done. The catalogue is profusely illustrated, several colored plates and gorgeous cover designs going toward its further embellishment and attractiveness.

Vegetable Plants

LETTUCE PLANTS Grand Rapids, Boston Market and Big Boston, 25c. per 100, \$1.00 per 1000.

TOMATO Mayflower and Lorillard, 50c. per 100 R. VINCENT, Jr. & SONS CO., White Marsh, Md

R. VINCENT JR. & SONS COMPANY, White Marsh, Md.—Catalogue of Geraniums; most beautifully illustrated, and enumerating large and interesting lists of this specialty of the firm. The front cover is a representation in color of the beautiful Geranium Dargata, and, in color, is very true to nature. This is one of Bruant's Premier 1905 novelties. The back cover is a very life-like representation in colors of Pamela, one of Cammell's 1906 varieties. The inside of the catalogue is illustrated with photo-engravings in green black, with a light tint background, of many of the novelties offered by this firm, the illustrations being in every instance original, and, in a majority of cases, the first trusses from young plants. A handsome catalogue. Also Wholesale Trade List for Florists and dealers only of Vegetable, Greenhouse and Bedding Plants.

R O S E S

Feeding.

The days are now getting longer, and as the sun's rays gradually grow stronger the plants will start off with renewed vigor, thus plainly showing that more food will have to be furnished, if the plants are to retain their strength. Affording liquid manure is probably the best method of supplying the needed nourishment; this should be weak at first, and as the plants get accustomed to it, increase the strength. The liquid, before being applied, should be allowed to ferment; for this purpose two tanks should be employed—one in which the fermenting takes place; then as needed this can be drained into the other tank and diluted with clear water to the proper strength. Liquid made from green manure and not allowed to ferment does not do the plants much good, and may cause them to drop some of their foliage. When first using liquid manure do not have the beds too dry, though later in the season this precaution need not be taken. Where the liquid cannot be applied, our next recourse is a mulch of partly decayed cow manure; if this is a little green no harm will result, if a small quantity is put in the house at a time; but no plant can derive much benefit from too fresh manure. Another good fertilizer to use, where either of the above is not available, is tankage. At this time of the year this soon is taken up by the plants. Pulverized sheep manure, if pure, is also very beneficial. It is a little early yet for wood ashes; these are very quick acting and best adapted for Spring feeding; if used earlier, the beds do not seem to dry out so freely. But no matter what fertilizer is applied, light and frequent applications are preferable to one heavy dose.

Grafting.

While the bulk of the roses grown under glass are on their own roots, we still have with us advocates of the grafted stock, and they are numbered among our best cultivators too. If I am not mistaken, grafting was first employed as a preventive, or rather a remedy for eel worm, as these pests were seldom found on the roots of the manetti, while roses on their own roots were badly affected by them. Of late years little complaint has been heard concerning the eel worm but grafted plants we still see wherever roses are grown, both indoors or outdoors. Manetti is the stock now used almost exclusively by rose growers; this is generally imported, as in Europe it can be procured cheaper than that home grown for grafting purposes. The stock and cion should be as near the same size as possible and the work must be carefully done if the union is to be perfect. The stocks, of course, should be fairly well rooted in 2 1/2-inch pots, cut back close to the pot, so that they can be worked conveniently. The cut should be about three-quarters of an inch in length. Cut the cion to suit, then place them together, making sure the bark of one fits closely to the other; then tie securely with radia. The frame in which the plants are to be placed should be almost airtight and so arranged that no sun will strike it. A temperature of about 80 degrees may be easily maintained.

Give the woodwork a good coating of hot lime to prevent fungus, then put on the bench a little moss, with screened ashes, for the pots to sit on. These should be well watered before the plants are inserted, so that no water need be used for a few days. Keep the frame close, and if the right temperature is maintained the union will be effected in about two weeks, when the sash that forms the top of the frame should be elevated a little higher each day to harden the plants gradually. When the union is complete and the plants properly hardened, they can be placed and treated the same as young stock. To prevent breaking put a little stick in each pot, and tie securely. PENN.

NEW FORESTER AT IOWA STATE COLLEGE.—At a recent meeting of the Board of Trustees of the Iowa State College, C. A. Scott of the United States Forest Service was elected to the chair of forestry to fill the vacancy caused by the resignation of Professor H. P. Baker who accepted a more lucrative position at the Pennsylvania State College. Mr. Scott is a graduate of the Kansas State Agricultural College and a student of the Yale College of Forestry. He has been continuously in the employment of the Forest Service since graduation and during this period of seven years has gradually advanced through all stages of the work from that of student assistant to forest supervisor, which position he resigned to accept the chair of forestry at the Iowa State College. His work has been largely confined to the Middle West and the Rocky Mountain States; hence he has the advantage of being familiar with the forestry conditions of the Upper Mississippi Valley. Since its origin he has had charge of the extensive forest nurseries and plantings of the Dismal River National Forest. During the past three years he has given a special course of lectures before the Nebraska University forestry students and during the Winters has also rendered assistance as a lecturer at the Farmers' Institutes of Nebraska. In 1906 he was elected to membership in the Society of American Foresters, a professional organization which is limited in its membership. His training, experience, strength of character and personality make him one of the best men available for the position to which he has been elected at the Iowa State College.

American Chestnuts.

I noticed in your issue of December 28, 1907, the statement that there is a demand for fine quality American chestnut trees and you advise propagation by grafting when fine specimens are found. I have a tree that is on poor ground, the tree is large, and bears every year numerous sweet black chestnuts, many as large as a fifty cent piece. Which will be the best to graft, on roots or young trees, and what is the mode?

Ky. A. V.

—For your purpose you would find grafting on young trees the better way. It is the plan followed by nurserymen who propagate the improved kinds of chestnuts. Graft in Spring just as the buds are about to push.

If yours is a true American chestnut, with nuts as "large as a fifty cent piece," many of them, it would be a valuable kind to increase. It must be as large as the Spanish chestnut!

J. M.

Plant Japanese Snowball Early.

The popular and beautiful Japanese snowball, *Viburnum plicatum*, is one of the most impatient of all shrubs to expand its leaves in Spring, and from this fact is apt, in its well-doing, to disappoint those who plant it late. It needs to be placed on the list of those subjects to be planted among the very first of those moved in Spring. There are some shrubs that, though preferring early planting, will get along very well set out later if pruned back well, but the Japanese snowball is not one of these. It may live under such treatment, but it does not like it. Set out early and with good roots it will flower fairly well the same season, another reason for early planting. If not possible to plant it early, get it out of the ground and heeled in at any rate, for this will tend to check it somewhat.

There are two trees, the larch and the weeping willow, that are in the same class as the Japanese snowball, excepting that they are even more impatient of delay in planting. It takes but a few warm days to bring both into leaf. Both will live with close pruning, even after they have made new growth, but it takes closer pruning than necessary in order that they may thrive. How the lilac hates delay everybody knows! Frost is not over when its leaves push out; if a few warm days come one can almost see the buds swelling.

Pyrus japonica and *Ribes aureum* and other ribes are "early risers," too. The nurseryman who starts late in getting out his orders will find these shrubs

in leaf before he gets to them if he is not careful to start on time.

In these days of hurry, however, there are but very few who are not out with their digging forces before frost is over; still, the hints on a few important shrubs and trees and their early budding tendencies will be of use, it is hoped.

Pruning Hydrangeas.

Spring will soon be on us, and before its advent all the hardy hydrangeas should be pruned. The closer back they are cut the finer the heads of flowers. By hardy hydrangeas are meant the paniculata, the *P. grandiflora*, both of Japanese origin; the native ones, *radiata*, *arborescens* and the variety of the latter, *sterilis*. All these differ from the *Hortensia*, the one florists use so much for forcing in pots, in that they may be pruned down close to the ground and still will flower, every shoot that springs

to do, though it is from the box edging kind, *H. suffruticosa*. At any rate it is better than all the varieties when the object is to grow it for the sake of getting strong shoots from it for florist use.

Box delight in rich moist ground. Then it flourishes, making strong shoots of rich green foliage, whereas if in dry, poor soil the leaves are small and of a dull green color, and they soon become a prey to red spider.

When grown for the purpose of cutting its shoots a good pruning back in early Spring is advantageous to it, tending to the forming of new shoots of good length, such as florists demand. Spring is the best time to set out box bushes.

Beauty of *Viburnum Opulus* in Winter.

Up to the present time, almost the first of February, the Winter has been exceptionally mild, permitting many of the ornamental berried plants to

keep up their good display unharmed. But no matter what the season is, there are some berries that do not mind the freezings; among them those of the *Viburnum opulus*, or as older works have it, *V. oxycoccos*. Its old common name is high bush cranberry. Following its clusters of white flowers in May are the berries, which become of a deep red color in time, and which greatly adorn the bush in the days of Autumn. But it is after the leaves fall that the pretty clusters of berries show to perfection and these clusters are in good shape all through the Winter.

There are a few other shrubs that do the same—*Berberis Thunbergi* for one—but the number of such shrubs is small.

The time is approaching for the planting out of this viburnum. To have it flower well it needs young wood, annually, and this is best obtained by pruning back the shoots every year, a good time to prune being right after flowering; but if planting them in Spring cut them back then, say to half their length. This viburnum can be increased by hard wood cuttings made now and planted early in Spring, as well as by seeds sown in Fall or Spring.

JOSEPH MEEHAN.

Viburnum Opulus (Oxycoccos)

forth later on will bear a head of bloom. Exactly the reverse is the case with the *Hortensia*. Prune it back hard, or let the Winter freeze it back to that degree, and not a head of flower will result, practically.

The cuttings from the pruned back hardy hydrangeas will root if set in the ground, but as plants are so easily had from both layers and green wood cuttings in Summer, the use of the hard wood shoots is rarely cared for.

The flowers of the *H. paniculata grandiflora* are of so much use to florists that many adopt the plan of keeping a lot of plants in cold storage until quite late in May, then setting them out. These plants come into flower long after those that started to grow naturally have done, proving a source of great profit to those individuals who have them. Commission men are glad to get hold of these late flowers, they are so useful in so many ways.

Growing Boxwood for Florists' Use.

Boxwood wreaths were in demand the past Christmas, and for many other purposes florists found a quiet call for it. Besides its use for cut purposes, the demand on nurserymen for plants for setting out on lawns and for growing in tubs is very much greater than it ever was before. It would seem to be good policy for growers of boxwood to arrange for the planting of a quantity of it. The old kind of tree box is the best, at least it is a faster grower than any of the other varieties of it common in nurseries. Many catalogues have it under the name of *Buxus arborescens*. This name was doubtless applied to it in the first place

BIRMINGHAM, MICH.—We are requested to state for the benefit of nurserymen sending catalogues, that the Cranbrook Nurseries, Birmingham, Mich., have ceased to exist.

H. J. Corfield, who for the past three years has been designing and constructing an estate of nearly three hundred acres in extent, near Detroit, Mich., has resigned and will return East.

For the purpose of promoting the forestry industry in south Manchuria, the Chinese officials have engaged a Japanese expert from Tokyo to act as head master for the proposed school of forestry at Mukden for a term of four years, with two Chinese gentlemen as his assistants; but, owing to the lack of funds, the school has not yet been opened.

CONSUL L. E. DUDLEY reports that a nurseryman of Vancouver recently shipped \$600 worth of general nursery stock to Shanghai, China. The order was received by mail, and the purchaser evidently went through the nurseryman's catalogue pretty thoroughly, as something was ordered from nearly every page.

A document of much interest to nurserymen is illustrated bulletin 119 of the Bureau of Plant Industry, Department of Agriculture, Washington, D. C., on the subject of "The Mulberry and Other Silkworm Food Plants," prepared by George W. Oliver, plant propagator. Mr. Oliver has brought the data he furnishes down to date.

DREER'S SUPERB DOUBLE PETUNIAS

LATANIAS

Plant for Name.—W. R. Mass.—*Andromeda polifolia*, sometimes called wild rosemary.

(15) **Begonia Thurstoni.**—I send you leaves of begonia for name. The plants grow from 15 to 20 inches high and have pink or rose-colored flowers. I think it is a scarce variety. Is it good or valuable? It is easy to grow.

Ohio. S. J. G.
—The begonia sent for name is evidently *Begonia Thurstoni*. The flowers of this variety are not of much value; it is grown chiefly for its ornamental foliage. Commercially, we would say that there would not be much profit in growing it to any large extent.

(16) **Flies on Grapes.**—I am sending you a few flies that have been found on grapes here. Kindly give me name of same. I took charge of this place on the 1st of July and ever since have been trying to clear out the flies, but have been unsuccessful. I have tried to freeze them, but they withstood all the frost so far. I cleaned out all the old dirt and made the best job in my power, but they have not disappeared.

Conn. J. F.
—The insect is evidently *Tortrix vitisana*, though we are not quite sure, as the specimens were dead and somewhat dried up when they reached us. To eradicate this pest it is desirable to remove all loose bark, and this can be done in Winter by means of a brush of stiff fiber, e. g., of piassaba. All dead leaves and rubbish should also be removed from the surface of the soil, and either consigned to the compost heap or burned.

(17) **Spot Disease of Violets.**—Will you kindly tell me what is the matter with my violets; the leaves spot and gradually die away. Is it a disease? If so, give me cause and remedy. I keep the temperature at from 45 to 50 degrees, and sprinkle nearly every bright day with a watering pot.

Mass. A. SUBSCRIBER.
—This is what is known as the spot disease. Remove all the leaves that are affected and burn them. Professor Galloyway, in his book on "Violet Culture," says: "When the disease has reached a severe form, the flowers are practically worthless, and the only thing that can be done is to put forth every effort to get the plants into a healthy condition as soon as possible. Briefly, therefore: Keep the plants at all times in a healthy growing condition. Rigidly destroy all diseased parts of the plant. Never apply water to the leaves in such a way that they cannot dry in from four to five hours. Keep the leaves free from dew. Avoid fumigation with tobacco, but if tobacco is used make the smoke as light as possible."

(18) **Insects on Carnations.** Can you give us any information as to identification and eradication of the enclosed insect pests, which have been with us about three years, increasing in number each year and now are beginning to do considerable damage to our carnations?
H. and H.
New York.

—This is the rose chafer, the scientific name of which is *Macrodactylus subspinosus*, and, owing to its hard, shell-like skin, contact poisons are not of much use in fighting it. Bordeaux mixture is distasteful to them if sprayed on the plants, but the best remedy is to make a daily search, shaking the beetles off the plants into some receptacle and destroying them. We have seen them in greenhouses, but never in large numbers.

Brazilian Melon Fruit.

Regarding the question relating to the "Brazilian Melon Fruit," that appeared in a recent issue, Newton J. Peck of Woodridge, Conn., sends us an illustration taken from a catalogue, showing a plant loaded with melon-shaped fruit, and bearing the caption "Melon Pear or Pepino," described as follows:

"A rapid-growing, dark-leaved plant, blooming when quite small. The fruit is the size and shape of a goose egg, and very handsome, in color a pale lemon mottled with waves of bright vi-

FOR half a century we have been making a specialty of **DOUBLE PETUNIAS** and our strain is accepted as second to none, either here or in Europe. We annually plant many thousand seedlings from which only the finest double fringed forms are selected for propagating purposes, thus improving the strain every season. We offer fifteen distinct varieties.

3-inch pots, 75c. per doz.; \$6.00 per 100; the set of 15 for \$1.00.
21-inch pots, 60c. per doz.; 4.00 per 100; the set of 15 for .75.

SEED OF OUR SUPERB STRAIN OF FRINGED PETUNIAS. Double, 75c per 500 seeds; \$1.50 per 1000 seeds. Single, 50c. per trade pkt. \$1.00 per 1-16 oz.; \$1.50 per 1/2 oz.

Our Quarterly Wholesale List offers a full line of seasonable Plants, Seeds and Bulbs.

HENRY A. DREER, PHILADELPHIA, PA.

FERNS MY SPECIALTY

150,000 assorted ferns for jardinières, excellent stock, in 15 of the best market varieties, including *Cyrtomium Falcatum*, *Aspidium Tsusemense*, *Pteris Wimsetti* and *Mayii*, in good proportion, from 2 1/4 in. pots, \$3.00 per 100; \$25.00 per 1000; 500 at 1000 rate.

CENTER PLANTS (Exact Size)

- Kentia Belmoreana*, 2 1/4 in., \$1.30 per doz., \$10.00 per 100.
- Assorted Ferns, 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
- Adiantum Cucunatum*, fine stock, 2 1/4 in., \$3.50 per 100, \$30.00 per 1000; 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
- Adiantum Farleyense*, 4 in., \$4.75 per doz., \$35.00 per 100; 6 in., \$8.50 per doz., \$65.00 per 100, 6 in., \$12.00 per doz.
- Adiantum Rhodophyllum*, 4 in., \$2.50 per doz., \$20.00 per 100; 6 in., \$5.50 per doz., \$40.00 per 100.
- Adiantum Graecillimum*, 2 1/4 in., \$3.50 per 100, \$30.00 per 1000.
- Adiantum Regina*, 4 in., \$3.00 per doz., \$22.00 per 100; 5 in., \$6.00 per doz., \$45.00 per 100.
- Cibotium Schiedelii*, 4 in., \$3.50 per doz., \$25.00 per 100.
- Nephrolepis Scottii*, 6 in., \$7.00 per doz., \$60.00 per 100; 8 in., \$15.00 per doz., worth the double.
- Elegantissima* and *Pieroni*, 6 in., \$5.50 per doz.
- Fern Spores**, gathered from my own stock, guaranteed fresh, 1907 crop, good, commercial varieties, 30c. per trade pkt.; \$3.00 per dozen.

J. F. ANDERSON, Short Hills, N. J.

FERNS For Dishes

Fine strong plants from 21 in. pots, all leading varieties, \$3.00 per 100, \$25.00 per 1000. Cash with order.

EMIL LEULY, Summit Ave., West Hoboken, N. J., near Angeliue St.

olet. Inside the fruit resembles a pear, and tastes something like a banana, but is much sweeter and juicier. Very ornamental when in flower and fruit. An elegant pot plant; also fine for the garden.

Also the following letter: "In answer to P. B., New York, in the issue of January 11, 1908, I am confident the above described plant is the one he inquired about. If it is, it will be, in my opinion, a long time before he picks the first ripe fruit. I wish P. B. would keep us posted on how he succeeds. I would like to buy his first ripe fruit, if it is from the above plant, and he does not set his price too high."

Bushy Ferns

Unusually fine stock of the Holly Fern (*Cyrtomium falcatum*), *Pteris croatica* albo, *Pteris Wimsetti* e. c. 3 in. pots, 6c.; 2 in. pots, 3c. We have never had better plants and will give you very liberal count on January orders.

- Cibotium Schiedelii*, 3 in. pots for growing on, 20c.
- ASPARAGUS Plumosus**, extra strong 2 in. stock but with some of the foliage slightly disfigured. Give them a small shift and they will make fine plants. \$2.00 per 100.
- PRIMULA Obconica Grand.** In full bloom. 3 in. pots, 5c.; 3 1/2 in. pots, 6c.; 4 in. pots, 8c.

R. G. HANFORD, NORWALK, CONN.

FERNS For Jardinières

Best varieties, strong, healthy plants from 2 1/4-inch pots, \$3.00 per 100; \$25.00 per 1000. 500 at 1000 rate. 3-inch, \$6.00 per 100.

CIBOTIUM Schiedelii, 6-in. pots, \$1.00 each.

Nephrolepis Scottii, 7-in. 75c. and \$1.00 each, 9-in. \$1.50 and \$2.00 each.

THE WEEK'S WORK

Timme's Timely Teachings.

Mignonette.

When the plants in a bed of mignonette show no signs of being exhausted after the first crop of flower spikes has been cut, it will pay the grower to induce them to furnish another. Although this second is never quite so good as the first, it is scarcely less desirable for the many purposes cut mignonette is made to serve and at all times brings its price. In marketing the first cut five or six inches more or less in the length of the stems amounts to no difference in the price obtainable for mignonette, but has all to do with quality of a succeeding crop from the same plants. From short, horn-hard stumps no fine second crop will spring, but if in cutting the first spikes caution is had to leave the remaining lower stem-end fully a hand higher than is usually the case, the chances for more to come in salable material and satisfactory returns are good. There will then be a break from the upper eyes into a growth which it is worth while encouraging by continuance of careful attention to the requirements of indoor mignonette. This, in the first place, includes care in watering. It is safer, especially when the first heavy top growth has just been cut away, to let the soil dry out occasionally to a reasonable degree than to keep it constantly wet, though the daily spraying should not be omitted. Then as the shoots lengthen staking and tying are necessary. Liquid manure is to be employed sparingly, both as to strength and frequency of application; a warning worth heeding as regards ventilation also at this season. One essential in the culture of mignonette, on the other hand, which is never over-supplied, is light, clear, unfeigned light, not to be had under an age-stained glass roof, and new houses, therefore, should be chosen for this culture, if there is a choice between old and new houses. In the cleaning of old greenhouse glass no process as yet has been hit upon which fully restores its original perfect transparency. Be it ever so clean it will never again be as clear as when it was new, as everyone can find out for himself by replacing a broken pane in an old glass roof with a new one. Now, if perfectly clear daylight must be counted upon in the production of high grade Winter-flowering crops of whatever kind, mignonette is the one that more than any other demonstrates its powerful influence on plant and flower development under glass. High grade mignonette for the market pays as well as anything else, but cannot be produced under weather-dimmed glass. All this—and there need be no doubt about it—explains why in general all crops grown under new glass are so much more satisfactory than those raised in old structures, although all other improvements in the modern house usually are given all the credit, the newness of the glass, really the most potent feature, never being considered.

Mignonette in Pots.

It should hardly be necessary to remind retail plantmen of the fact mignonette grown for the general pot plant trade is a good seller, not diffi-

cult to work into shapely and attractive specimens in less time than it takes with most other kinds of stock, and altogether a profitable thing to grow. Still, mignonette in pots is a scarce article in greenhouses run at high speed to produce stock deemed alone worthy of being grown for this line of trade and therefore in evidence everywhere to the entire exclusion of anything not seen at the neighboring florists'. Potted mignonette is not only an easily raised good seller, but also a most satisfactory house plant, being liked by everybody and much called for at all seasons.

In order to be supplied with a goodly number of nice plants in 4 and 5-inch pots for the Spring and Memorial Day trade it is necessary to sow the seeds now. The course of culture during this period will be an exceedingly smooth one, the conditions for normally progressing growth now being more favorable than at any previous period. It not nearly so tediously methodical as during the decline of the year. All kinds of mignonette may be grown into acceptable pot plants, but strains highly fragrant and of bushy, compact growth should be given the preference for this work. Good kinds for the purpose are Parson's White, Red Victoria, Machel, Goliath and a good strain of the old, common, sweet mignonette, of which latter, as also of Machel, three plants may be grown in one pot, together forming a dense bush, while of the others one plant in a pot is all-sufficient; and this one plant may be grown either into a compact pyramid without much or any training, or into the form of a half-standard tree, a stout bare stem supporting a well-balanced bushy crown.

All transplanting in the case of mignonette should as much as possible be avoided, though in order to save bench room we sometimes start the seeds in 3-inch and later on shift the well-advanced plant or three plants into 5-inch pots, taking care to disturb the roots in the operation as little as can be helped. In such a case we fill the 3-inch pot up to the rim with soil, sow half a dozen seeds in the center and with the bottom of an empty pot press all down quite firmly. Thus over-watering is not likely to occur, which is the one thing to be guarded against from the start. When the seeds are at once to be sown in the 4 or 5-inch pots, it is best, after having provided for drainage, to fill these up to about an inch or a little more below the rim, scatter the seeds in the center and firm as before described, filling in the balance of the soil required later on after the plants are thinned down to the strongest one or three wanted, they then needing this additional support to keep them firmly straight. In good, highly enriched soil, solidly firmed, and in the full light of a moderately warmed, not over-moist house, the plants, pinched back once or twice, will in due season finish up as fine stock.

Roses in Pots.

All roses potted up in November and expected to be in bloom for Easter must now be started into growth. In a low temperature, as low as between 40 and 45 degrees, for about ten days there is much gained in the starting of active root fibers before the leaf buds show any appreciable new life; and this gain is a telling one throughout the entire process of actual forcing. The next step to be

taken before the buds beat out neatly stake and tie up the canes of the Rambler varieties and to prune down to between three and six eyes the shoots of the hybrid perpetual and hybrid tea roses. On how this is done depends in great part the value of the plant when in bloom, yes, it may even be done so it never shows a bloom. This will happen if a strong branching rose is cut down too low, leaving none but blind wood eyes. And again, if the cut is made too high the finished though flowering plant will not be a nicely shaped one—the common defect in many of the potted roses of the hybrid permanent class. Pruning roses, especially potted roses, is an operation not hard to master but difficult to teach in black on white. The roses themselves are the best teachers; variety, character and condition clearly show to the somewhat practiced plantsman where the cut should be made for the bringing of best results.

The roses are usually moist enough at their roots when brought in to need but little water until foliage shows, while frequent light spraying is of benefit from the first day until the plants are sold. More water and a slow rise in the temperature are required as growth progresses. It is always safest to go slow at first, also to avoid any excesses or sudden changes when actual forcing is in full swing, especially as regards temperature and ventilation. Crimson Rambler and its later varieties in particular are easily ruined by a sudden fall in temperature or cold air currents, bringing and augmenting the trouble with mildew and greenfly, always hard to fight when once present and scarcely ever fully conquered before it is too late to save the foliage from disfigurement. Sixty degrees should be the maximum heat for Rambler roses; a few degrees less being preferable if time permits. Hybrid roses will invariably reach a more perfect finish in 55 degrees than in a temperature much higher. Nearly all the varieties of roses, dug up and potted last November, will in that degree of steadily held temperature as afforded from the time the buds show, with some less heat before that stage has been reached, want from about eleven to twelve weeks from start to finish, and nearly five weeks of this for the development of the flower buds at their first appearance into open or opening bloom at the end of the course. If some more heat should be found necessary—since weather conditions have a hand in all plans being carried out on specified time—it is best to afford the greater amount required after the buds have formed, and five degrees higher during the last stages in forcing usually suffice to make good last time.

Some varieties of roses grown in pots force uncommonly easy, but these, as a rule, are not the best appearing after being forced, nor the longest lasting when in bloom. The roses grown in pots all through the Summer and apt to ripen up their wood quite early, are, regardless of variety, the ones most easily managed and altogether the best for forcing, especially when a trade in early flowering potted roses is to be supplied. These require less heat and time in being worked into fine salable stock than field grown and Fall potted roses, but while the latter need very little or no strength upholding stimulant during forcing if potted in properly enriched rose soil, the former should be fed regularly with liquid manure after growth has started. Steadily held temperature, frequent sprinkling and care in ventilating will avert any great trouble with insects of any kind, and if entirely kept away by mild fumigation, regularly attended to, the roses will show up all the better for it.

Fuchsias.

It is not difficult to grow fine specimen plants in 8 and 10-inch pots by the middle of May from cuttings

struck in November or December, if fuchsias of extraordinary size are wanted. Fuchsias naturally start in with an unequalled rapid growth if only given half a chance, and when encouraged by favorable conditions and proper attention to keep this up until the desired height, spread and shape have been attained, not allowing any intermission in rapid headway all that time, which would only induce them to form buds and stop all further growth of stem and branches, grand specimens are had in six months. Such plants are fine for store window and show house, the glory of the conservatory after most of the Winter-blowing plants have ceased to cheer and attract, and it is well to raise a few fuchsias of this description for this purpose, but to fill a large space with stock of this kind in a house built and conducted for the bringing of profit is not wise.

There is more money in the raising of fuchsias of true marketable size. The ideal plant for the commercial florist and the one finding most favor with buyers is the bushy, nicely shaped fuchsia of from nine to twelve inches in height in a 4 or 5-inch pot, every branch clothed in crisp, healthy foliage and tipped off with a cluster of bloom in all stages of perfect development from the bead-like tiny buds to the fully expanded gaily hued blossoms. This is the kind that the people not only admire but also buy; it is the fuchsia that in its raising adds profit to pleasure for the grower. Fuchsias sell well from early in the Spring until the end of Summer as flowering potted plants from the greenhouse, but florists should not be over-ready to use or to recommend them for the filling of vases or window boxes or for bedding display, unless they are fairly sure of their being so employed in well-shaded positions and under the care of attentive persons during the hot months of the season. As an outdoor Summer display, massed in freely exposed borders, fuchsias are a decided failure, while as greenhouse plants proper they have lost none of their prestige.

This is a very good time for the starting of cuttings to be grown into fine plants for a season when fuchsias are most in demand. All the varieties of compact habit, single and double-flowered, are good for the purpose. The condition of the cutting to be rooted has much to do—more than variety with the making of fine plants. Misshapen, distorted shoots or the listless tips of leafless branches will make roots, but never good plants, and should therefore not be taken. Dormant stock plants, taken from their resting quarters, cut back to ripened wood, replanted in fresh soil and placed in a warm tolerably moist atmosphere, with clear light overhead at this season, are not slow in producing the right kind of cuttings. These in the form of well-shaped, close-jointed, rapidly developing shoots should not be taken off before they have attained some size and solidity of texture at the butt-end or heel. Then cut or broken off and freed of the lower leaves they will root with good bottom heat in so short a time that no interruption in growth is apparent. And for this reason and to prevent any further disturbance, it is best to have them form their roots at once in small pots filled with sandy soil and placed on a bottom warmed bench. Any house in which roses can be grown and flowered to perfection will suit fuchsias at present, while later on toward Spring a shading on very bright days will be of benefit. One shift from the small pots, after the roots hold ball, into the 4, 5 or 6-inch pots—if these latter seem to be required for an exceptionally strong variety—will result in bushier plants than frequent short shifts. The stopping of the plants is not necessary; only unruly side-growths, marring symmetry of shape, may need a pinching back occasionally. Very rich, unsifted compost should be used in potting, and frequent sprinkling is what fuchsias enjoy.

Always in Demand

ARAUCARIA ROBUSTA COMPACTA and GLAUCA

JUST LOOK! An ARAUCARIA ROBUSTA COMPACTA OR EXCELSA GLAUCA, worth a ten dollar bill, perfect shape and color, 6-7 in. pots, 6-year old, 4-5-6 tiers, 28 to 10 in. in height, the same in width, only \$3.00, 6-7 in. pots, 6-year-old, 4-5-6 tiers, 25 to 28 in. height, \$2.00 and \$2.00, 6-7 in. pots, 3-year-old, 3-4 tiers, 18 to 25 in. high, \$1.50 to \$1.75. **Excelsa**, 6-7 in. pots, 5-6 tiers, 25 to 30 in. high, \$1.50, 6 in. pots, 5-year-old, 5 tiers, 22 to 25 in. high, \$1.00 to \$1.25; 6 in. pots, 4-5 tiers, 4-5-year-old, 18-20-22 in. high, 75c.; 2-year-old, 2-3 tiers, nice little plants, 6-8 in. high, 40c.

WITTMANN, larger than 8 in. pot, planted in 7 in. pots, made up in June, three plants in a 7 in. pot, now as large as a bushel basket, price, \$1.25 to \$1.50 per pot; middle size, 75c.; very heavy specimens, \$1.00 per pot; 6 in. pots 60c to 75c.

PIERSONI FERNS 4 in., 25c.; 5-5½-6 in. pots, 35c.-40c.-50c.

PTERIS WILSONI, 5½ in. pots, very handsome, much admired fern, 20c.

AZALEA INDICA. Have an immense stock now planted in 6 in. and 7 in. pots, were grown for us under contract by an Azalea Specialist in Ghent, Belgium. Have only the leading varieties such as, *Mme. Van der Cruyssen*, 12500 of this well known variety of the finest shape, full of buds, *Niobe*, *Bernard Andrew Allen*, *Deutsche Perle*, *Simon Mardner*, *Empress of India*, *Prin. Walters*, *Apollo*, and by doz. more popular sorts, price each, 75c., \$1.00, \$1.25, \$1.50, \$1.75, \$2.00, \$2.50 each.

BOSTON FERNS. Have about 2,000 of Boston Ferns, 7 in. pots, made up as bushel baskets, worth \$3.00, \$1.25 to \$1.50 each, 7 in. pots, as large as bushel basket, worth \$2.00, cut down to 7-8 in. and \$1.00 each, 6 in. pots, very large, worth \$1.00, only 50c., 5-6 in. pots, 50c. and 40c. each.

KENTIA Forsteriana and *Belmacrana*, 18-20-22 in. high, 5-7 in. pots, bushy, 5-6 in. pots, 50c. and 40c.

LAFANIA Borbonica, 4 in., strong, 25c. each.

COCOS Weddelliana, 3 in. pots, 10-12-15 in. high, 15c.

ARICA Lutescens, 4 in. pots, made up three plants in a pot, 18-20-22 inches high, 20c. each.

FICUS ELASTICA or **RUBBER PLANTS**, home grown and Belgium stock, 18-20 to 10 in., 5-5½ to 6 in. pots, 25c.-35c.-40c.-50c. and 60c. each, 7 in. pots, 75c.

ASPARAGUS plumosus nanus, 3 in. pots, \$7.00 per 100, 4 in. \$10.00 per 100; all bushy plants.

HYDRANGEA OTAKSA. Now is the time to force *Hydrangea Otaksa* for Easter blooming. Remember only pot grown will form successful for Easter; we grow ours in pots in the summer and plant them in cold frames (row inside); have about 500 to spare, 6 in. and 7 in. pots, 25c., 35c., 50c. and 75c. each.

BEGONIA, new improved *Erfordi*, 4 in., strong, 20c.; 5½ in., 25c. each.

Please mention if plants are to be shipped with or without pots. All goods must travel at purchaser's risk. Cash with order, please.

Hydrangeas.

Easter is somewhat late this year and hydrangeas of the hortensis and Otaksa types, if not already started, may yet be brought forward and forced into bloom in good season for that holiday. Well-grown hydrangeas in flower, however, can be disposed of as readily after Easter as at any time, bring as much, and especially in demand at Decoration Day. The handling of very large plants, as our greenhouse space must now be utilized, does not pay when this includes early forcing, but a goodly number of small and medium sized hydrangeas for the early Spring sales can be grown with the expectation of the cultivator being liberally rewarded for the labor involved in the room taken up by the plants. It is important that hydrangeas to be forced have their wood thoroughly ripened, which, if not started sooner, they should be by this time. Besides this, they should show good sized, pump terminal buds, and if these in a month from now have progressed to development to the extent of

CINERARIAS!

for Easter sales. Dwarf, giant flowered, all shades and colors. Cool grown, stocky plants, 2½ in. \$2.00, 3 in., \$3.00 per 100. Cash with order.
SHELLROAD GREENHOUSES, Grange, Baltimore, Md.

plainly exhibiting the trusses in their beginning stages of advancement the hydrangeas will be in full bloom by this year's Easter. From 55 to 60 degrees is a high enough temperature for hydrangeas under forcing. Much water is required to keep the roots of a growing and flowering hydrangea steadily moist. A dose of liquid manure before and while the trusses are coloring up, given about twice a week, has an almost immediate effect in imparting intensity of color to flowers and foliage. Sturdy, short side growth put forth by hydrangeas during forcing, sometimes amounting to a great number of stout, little shoots all along stem and branches, forms good material for propagation the cuttings rooting readily at this season and growing into good stock for next year. **FRED. W. TIMME.**

Wednesday, January 29, is McKinley Day, when no doubt, as formerly, many carnations will be worn throughout the United States in memory of the martyred president. Retailers should draw attention to this occasion by making special window displays of carnations appropriate thereto, and encourage the public in celebrating the event by keeping the price of the flowers within reasonable bounds.

Improvement of Plants by Hybridization.

In view of the fact that the breeding of carnations is to form an important topic of discussion at the Washington meeting of the American Carnation Society next week, the following brief account of the work of the earlier plant hybridizers, taken from the Connecticut Experiment Station Bulletin 158, may not be without interest at this time. The author of the bulletin is Dr. Edward M. East.

"The practical application of artificial cross-fertilization to the production of new forms dates from the beginning of the eighteenth century when Thomas Fairchild, an English gardener, crossed the carnation with the sweet william. The hybrid was almost sterile, but proving to be a valuable variety, it was propagated by cuttings for many years. This novelty seemingly aroused little enthusiasm for the scientific study of crosses, and no important generalizations were made until about 1760. At this time Kölreuter began a systematic study of hybrids, and obtained a knowledge of their behavior that was not greatly increased until the last quarter of the nineteenth century.

"Kölreuter established upon a firm basis Camerarius' previous discovery of the sexuality of plants. He also found that hybrid plants resembled the pollen (male) parent as closely as they did the seed (female) parent. Further, that in most cases it made very little difference in the final result of a cross, as to which of the two parents was used as the pollen and which as the seed parent. That is, the products of reciprocal crosses are nearly identical and the male parent transmits as many characteristics to the hybrid as the female parent.

"Kölreuter, without the apparatus of the modern microscopist, came very near discovering the mechanism of fertilization. We now know that the application of pollen grains to the stigma of the flower's pistils is merely a mechanical act. The pollen grain contains a minute structure called the nucleus, which passes down the style of the pistil through the growing pollen tube, into the ovary, where it unites with a similar nucleus in the ovule. (fertilization). From this one cell the embryo in the seed and later the whole plant is formed by exact and equal divisions. Kölreuter believed that fertilization consisted in the mingling together of two vital fluids, one contained in the pollen and one contained in the stigma, and that these passing down the style started the ovule to developing into the seed. He actually determined that about fifty pollen grains were sufficient to mature at least thirty seeds. It is marvelous how near the right path he was, with such limited facilities.

"Kölreuter also found that by repeatedly recrossing a hybrid with one of the parent varieties from which it was derived, he could finally obtain individuals that were indistinguishable from that parent species. Furthermore, he found that there were exceptional cases where reciprocal crosses could not be made. *Mirabilis jalapa* (female parent) was easily crossed with *Mirabilis longiflora* (male parent), but with eight years' work he did not succeed in making the reverse cross. We now know that a reciprocal cross is sometimes impossible, because of a seeming mechanical inability of the nucleus of the pollen to break through and gain admission to the nucleus of the ovule. When this difficulty is artificially overcome the fertilization is possible.

"In the beginning of the nineteenth century we have the work of Thomas Andrew Knight, an English plant physiologist, who has very justly been called the father of modern plant breeding. Knight was probably the first who really appreciated the immense possibilities of hybridization as a means of improving domestic plants, although it is only fair to state that the principle of selection was known and made use of in improving strains of cultivated plants by Joseph Cooper of New Jersey at a somewhat earlier date. Kölreuter's work was theoretical, while Knight, in addition to his contributions to theory, made definite practical use of his knowledge gained by experiments. The commercial varieties that he obtained through crossing were numerous and important.

"Knight's greatest contributions to knowledge will probably always be known from the two following principles that he proclaimed; but science owes him a still greater debt from the fact that he was a pioneer of the type of inductive experiment. He generalized from his experiments instead of making theories to prove by philosophical discussion. Knight's first principle was that modification of the food supply is the leading cause of variation. If we write fluctuating variation instead of variation, the principle is still accepted. He also found that the products of crosses were often more vigorous than the parents of the hybrid; and that a strain of plants that had deteriorated through continued self-fertilization could be renewed in vigor by crossing with another strain. This conclusion has since become known as the Knight-Darwin law. Darwin supplemented Knight's work by many experiments comparing cross-fertilization with self-fertilization and expressed his results in this terse saying: "Nature abhors perpetual self-fertilization." Darwin's results, however, rest on a rather slender basis. He used characters such as heights of plants as a measure of vigor, and these are far from desirable standards. There are also many cases known, such as tobacco and wheat, where self-fertilization is indefinitely continued by nature without evil results; in fact, with them a decrease in vigor seems to be the immediate effect of a cross. The Knight-Darwin law should probably be changed to read: Nature re-

CLUB AND SOCIETY DOINGS.

Society of American Florists and Ornamental Horticulturists

sists any sudden change in long established conditions.

"During the remainder of the nineteenth century several noted investigators into the phenomena attending hybridization lived and worked. Gartner, Naudin, Poëke, Vilmorin and many others contributed large numbers of important facts, but made no great generalization.

"It was found that in general the closer the botanical relations of two plants, the more easily they will cross. Crosses between varieties are generally very easy to make; those between Linnean species have been made in quite a number of instances, while crosses between genera and families are rare, although they have been recorded. Close botanical relationships, however, are not unfailing proofs of the easy production of hybrids; Bailey states that the squash absolutely refuses to cross with its near relative the pumpkin, while on the other hand Poëke mentions successful crosses between parts of the lily and amaryllis, and of the figwort and gloxinia families. It was likewise discovered that hybrids arising from widely different parents are usually much more likely to be sterile than are those from nearly related parents. But this rule is by no means without exceptions, for a number of hybrids between different Linnean species are known that are perfectly sterile. Sterility of hybrids among themselves does not always unfit them as prospective commercial varieties, as they are often fertile with one or other of their parents, and the progeny of this cross are fertile among themselves. In other cases infertile hybrids can become of great value through propagation by means of cuttings, grafts, tubers, etc.

"It was also early discovered that when two kinds of pollen were placed on the stigma of a plant at the same time, only one kind was effective in the fertilization. This was called prepotency of pollen. It is thought to be due to the great activity of some kinds of pollen grains, since some send out their pollen tubes faster than others and hence their nuclei reach the ovule first. The pollen of a different variety is often prepotent over pollen from the plant itself. In other cases, as in the potato, the plant's own pollen is prepotent over that of other varieties."

We can see from the above short account that although many experiments of merit were conducted, and quantities of isolated facts were observed and recorded, still no great principle was established until the work of Mendel, which was described in a previous issue of this paper. (See Vol. XXIV, page 44.)

BOSTON (MASS.) GARDENERS AND FLORISTS' CLUB.

The meeting of this club on Tuesday evening was unquestionably one of the finest gatherings we ever had. It was ladies' night and the members and their lady friends turned out to the number of about three hundred. There was only a little business transacted, the main part of the evening being devoted to the social entertainment features. An exhibition was a fine lot of geranium blooms and Freesia Purity from W. N. Craig, who was awarded a report of merit for the latter. David Weir exhibited a fine plant of Mochlosma riparium, for the superior cultivation of which he received honorable mention. F. W. Fletcher showed a vase of nice Eucharis amazonica.

The secretary in his report for the year said that 63 new members had been elected, that the largest attendance at any meeting was 316, the smallest 110, and the average for the year 153. The treasurer's report showed in the general fund a balance of \$658.39, in the landscape class fund \$205.88, and in the entertainment fund \$193.12. The club's expenses for printing, hall rent, secretary's salary, etc., had been \$521.37 and the receipts for dues had been \$720.50.

Resolutions on the deaths of W. W. Edgar and John Clark were read and adopted, as follows:

WHEREAS: Wilham W. Edgar, a member of the Gardeners and Florists' Club of Boston departed this life on December 18, 1907. Be it

RESOLVED: That the club herewith expresses its profound sorrow at the death of one who had exhibited energy and progressiveness in his business life; love and devotion to his family and friends and to justly merit the high regard of all who knew him.

We honor his memory and express our unfeigned regret that he was not spared to continue the good which resulted from his labor and judgment;

RESOLVED: That the Gardeners and Florists' Club tender its sympathy to the family of the deceased and that a copy of these resolutions be entered upon the records of the club.

(Signed) Edward Hatch, } Committee.
Wm. J. Stewart, }
Patrick Wele, }

WHEREAS: The Great Supreme Ruler of the Universe has in His infinite wisdom removed from among us by accident one of our worthy and esteemed members, John Clark, and;

WHEREAS: The long and intimate relation held with him as a faithful member of the club makes it eminently fitting that we record our appreciation of him. Therefore, be it.

RESOLVED: That the sudden removal of such a life from our midst leaves a vacancy and a shadow that will be deeply realized by all the members and friends of this, the Gardeners and Florists' Club of Boston, and will prove a serious loss to the community and public.

RESOLVED: That with deep sympathy with bereaved relatives of the deceased we express our hope that even so great a loss to us all may be overruled for good by Him who doeth all things well;

RESOLVED: That these resolutions be forwarded to the bereaved relatives and a copy spread upon the records of the club.

(Signed) H. E. Fiske, } Committee.
Thos. J. Gray, }
Peter M. Miller, }

During the evening piano selections were rendered by Mrs. Brough; songs by Mr. and Mrs. Brough, Frank Cannell, Mrs. Whittel and Miss Hanigan. Speeches were made by Wm. Downs, the vice-president; Thos. J. Gray, J. K. M. L. Farquhar and S. S. Skidelsky of Philadelphia, who praised the club for its progressiveness and urged as many members as possible to attend the Carnation Society's convention in Washington. Refreshments were served and it was a late hour before adjournment was made. J. W. DUNCAN.

WASHINGTON (D. C.) FLORISTS' CLUB.—There was a special meeting of the Florists' Club on January 21, in order to arrange all final details for the convention and exhibition of the American Carnation Society, which opens in National Rifles Armory on January 28. It was generally predicted that the show would be of a most excellent and attractive character. Letters from Secretary Wilson and Commissioner MacFarland were read, regretting the inability of each of those gentlemen to attend the banquet at Rauscher's on the night of January 30.

F. H. Kramer had a fine specimen of his yellow rose on exhibition, which was much admired. Mr. Kramer was appointed chairman of the reception committee; Wm. F. Gude, chairman of committee on decorations for the banquet hall. Admission to the exhibition will be free, January 29 being McKinley day, it was very appropriately decided to distribute the carnations to the public on that evening. The superintendent of the exhibition is Chas. McCauley, who will receive and look after the various consignments.

President Bisset has arranged to lessen the usual height of the exhibition tables that the flowers may be shown to better advantage. Appeals of the strongest character were made that the growers should contribute liberally to this show.

February 4 is the next regular meeting night of the club, and it bids fair to be most interesting and lively, as the nomination of officers for the coming year will take place. JAS. L. CARBERY.

President Treadwell has appointed the following gentlemen State vice-presidents for Michigan: A. Pochelon, 153 Bates avenue, Detroit, and Henry Smith, Grand Rapids. W. N. RUDD, Secretary.

Ladies' Society of American Florists.

All members of the Ladies' Society of American Florists attending the American Carnation Society's meeting at Washington, please wear your badges.

The Ladies' Society returns thanks to "Job" for his kind words, and hopes he will be able to say many more of them.

Mrs. W. J. Vesey, President.
Mrs. Chas. H. Maynard, Secretary.

Patrick McDonough.

Patrick McDonough, a well-known florist, died on Monday, January 13, 1908, at his home, 334 North Second street, East Newark, N. J., following a long illness. Mr. McDonough had carried on a florist business in Kearny and Arlington for many years and was a large property owner in Kearny. He was a resident of West Hudson over fifty years.

He is survived by a widow, a daughter and two sons, James McDonough, of Newark and William J. McDonough, of Harrison, N. J.

J. F. Noll.

John Franklin Noll, seedsman, died suddenly at his home in Newark, N. J., on Wednesday morning, January 22, of pleuro-pneumonia. Mr. Noll had been ailing for four or five weeks, but was able to be around until Sunday night, when he took to his bed.

The deceased was born at Morristown, Pa., April 30, 1870. He received his education in the College of Reading, Pa., and after completing it went to work for a Philadelphia book house, where he remained for eleven years. Some eight years ago he went to Newark, N. J., and started in the seed business under the firm name of J. F. Noll & Company. Here, by enterprise and hard work, he had built up an extensive business, particularly among the truck farmers in the South, his trade in that locality increasing yearly.

Mr. Noll was a young man of great energy and industry, possessed of a genial personality, and was highly esteemed by all with whom he came into contact, either in a business or social way. He leaves a widow, who will continue the business. Funeral services will be held at St. Antoninus' Church, South Orange avenue and Ninth street, Newark, N. J., on Sunday, at 2.30 p. m. The relatives will meet at the house, 284 South Eighth street, at 2 o'clock. Interment will be at the convenience of the family.

C. H. Shaffer.

Christopher H. Shaffer, a well-known nurseryman of Cascade, Ia., died on Tuesday, January 7, after a brief illness.

Mr. Shaffer was born in Lorraine, then a province of France, but now a part of the German empire, on January 5, 1823. His father who had been a soldier in the service of Napoleon, emigrated to the United States in 1831 and settled in Ohio and later in Indiana. Mr. Shaffer spent his boyhood and early manhood in the arduous labors of the farm. Possessing industrious habits and an upright personality he early in life laid the foundation of the sterling character which made of him the useful and reliable citizen that he was. In addition to general farming, he gave much attention to horticultural development. His nursery stock, which he, in association with his sons, had grown for many years, was widely known in eastern Iowa. In recent years he had not been actively engaged, having resigned the labors to his son, N. M. Shaffer. He leaves a widow and seven children.

A FULL REPORT of the meeting and Exhibition of the American Carnation Society, to be held in Washington, D. C., January 28 to 30, inclusive, will be given in next week's issue of The Florists' Exchange. A splendid opportunity will be afforded advertisers of carnations to present their offerings in that number. Don't fail to take advantage of this excellent chance to let the carnationists of the country know what you have to sell. Send in your copy early.

OUR READERS' VIEWS

Salvia Zurich.

Editor Florists' Exchange:
In The Florists' Exchange of January 11, page 41, I noticed an article on Salvia Zurich by a correspondent in Ohio, and would like to say I am as favorably impressed with it here in Massachusetts. I had only a limited number of plants on trial, but found they flowered from three to four weeks earlier than either S. splendens or Bonfire, being also somewhat dwarfer and a more profuse bloomer. I am sure that its earliness alone will make this one of the most popular salvias for the florist.
Mass. E. W.

Hardiness of Cycas Revoluta.

Editor Florists' Exchange:
Seeing the question asked in your issue of the 11th inst., regarding the hardiness of Cycas revoluta I will give you my experience with same, trusting S. S. will benefit by it. We have here four large beds, with very fine specimens which we cover on cool nights with unbleached muslin. There is also a little bed in front of my cottage which has never been covered. During the Winter of 1906 the thermometer registered as low as 21 degrees and it freezes here at 40 degrees. I may say all of the beds are fully exposed to north winds and it did not hurt them in the least.

We also have a very fine specimen of Camellia japonica, fully 12 feet high, which is left uncovered, being simply covered when in bloom.

Georgia. F. JENKIN.

AMERICAN CARNATION SOCIETY.

Reduced Railroad Rates to Washington, D. C.

Reduced rates can be obtained in the following States only (the Central Passenger Association having refused the special rate, thus cutting out the States of Ohio, Indiana, Michigan and Illinois. Members from these States will do well to buy tickets to Pittsburg and from there to Washington on the certificate plan, or get special rates for parties of ten to Washington): Mississippi, Alabama, Georgia, Florida, South Carolina, North Carolina, Tennessee,

Albert M. Herr,
Secretary A. C. S.

Kentucky, Virginia, West Virginia, Maryland, Delaware, New Jersey, Pennsylvania, excepting the northwest corner north and west of Pittsburg and west of Franklin, Oil City and Warren, New York, except the territory west of Salamanca and Buffalo, Connecticut, Rhode Island, Massachusetts, Vermont, New Hampshire and Maine. All of these States

William Nicholson,
One of the A. C. S. Judges.

Fred. H. Lemon,
President American Carnation Society.

will issue certificates with their tickets if asked for, making the rate one and one third.

Through some misunderstanding the New England Passenger Association instructed its agents to issue certificates for the meeting of the Breeders' Association to be held in Washington, D. C., January 28 to 30, in conjunction with this society, but failed to add that certificates should be issued to either the Breeders' or the Carnation Society, as both are to be counted as one meeting. This has been changed and covers the whole of the New England Association excepting the Eastern Steamship Company. Certificates will be issued for the Carnation Society in this territory the same as in previous years.

If you cannot get a certificate for the Carnation Society meeting and the agent has instructions to issue for the Breeders' meeting, buy your ticket for that meeting; it will be honored in Washington and you can then get the reduced fare to return home.

We want everybody interested in carnations to come to his meeting, and if possible bring along an exhibit; you will be getting into good company both in the exhibition hall and the meeting room.

More Special Premiums.

In addition to the prizes offered in the premium list, the Berry & Whitmore Company offer a silver cup for the best vase 50 blooms of light pink (Enchantress shade) either novelty or standard sort, but separate from other exhibits.

W. J. Vonderheide offers a very fine silver cup for a vase of 100 blooms of the best carnation to be disseminated for 1908. This exhibit must also be separate from all others excepting that it can enter for certificate of merit with the same vase.

In consideration of the lateness in the offering of these prizes they can be entered for at the meeting in Washington without extra charge. Any one not a member of the society and not acquainted with its rules and regulations, can by joining at the meeting make entries for the show free of charge. Members who have neglected to send in their entries or have additions to make can make them at the meeting by paying \$1 for each entry made. Everything impossible will be done to make the work of exhibitors easy and expeditious. We have a fine lot of entries now, want more for the above prizes, and any of the other numerous ones offered in the premium list.

Any mail sent the secretary after this issue of the paper must be forwarded to The Raleigh Hotel, at Washington, D. C., to reach him.

ALBERT M. HERR,
Secretary.

The American Carnation Society has had prepared a very attractive and appropriate Life Membership Certificate; it states that the society is an organization for the advancement of the carnation as a flower, the holding of exhibitions, and the preservation of literature pertaining thereto for reference and knowledge. Clusters of carnation flowers form the border design.

Tierney's Seedling Carnations.

The writer recently had the pleasure of seeing a fine batch of 330 seedling carnations. Sheltered from the north winds by the Atlantic Highlands, and to the south the picturesque Shrewsbury River in full view, here, in this quiet, restful place, is the country estate of Mr. Robert Hartsborne. While the greenhouses are not as extensive as are seen on some private establishments, nevertheless carna-

Peter Bisset,
Vice-President A. C. S.

tions are grown to perfection by Malachi Tierney, the gardener. Some six or seven years ago Mr. Tierney began the raising of seedling carnations, and, backed by the liberal support of his employer, he certainly has had marked success. I may say that he has been successful in two ways: First, in raising some very promising seedlings; second, in getting his employer very much interested in the progress of carnation culture.

A seedling that impressed me very much is now in its fourth year, although there has been no stock of it disseminated yet. It is a cross between General Abasco and Mrs. T. W. Lawson. I was told by Mr. Tierney that he started cutting from this variety on the eighth of September, 1907, and from that time to the first of January, 1908, some 8,000 blooms were cut from 330 plants. I, myself,

Fred E. Dornor,
Treasurer A. C. S.

prohibiting flowering quality. It is a fine specimen to be seen to be appreciated.

Richard Witterstaetter.

Charles Willis Ward.

Fred. Dörner, Sr.

counted twenty flowers and buds to a plant, and a conservative estimate would be from eighteen to twenty buds and flowers to each plant. I do not class this as the largest carnation on the market, but I do class it as a good "bread and butter" carnation, having a good stem, healthy foliage, and in color being a splendid red. The size of the flower averages from 3 to 3½ inches. Mr. Tierney tells me the average cut from it, compared with the other varieties he grows, is as five to one. The other sorts comprise Mrs. T. W. Lawson, Enchantress, White Perfection, Winsor and others, and they certainly are all in the pink of condition.

I understand this variety will be on exhibition at the coming show of the American Carnation Society next week in Washington, where I have no doubt it will be seen to good advantage. But the

There are two or three other promising seedlings on the place, which, if I am not mistaken, will be

S. S. Skidelsky.

Prosperity, a strong, vigorous variety, throwing an exceptionally large flower, with a firm, strong enough to support the bloom erect. Also a promising pink, which no doubt will show up to better advantage another year when the batch is increased, as now there are only about half a dozen plants of it.

Mr. Tierney is to be congratulated on the success he has obtained from the different crosses he has made during the past few years.

Oceanic, N. J.

WM. TURNER

THE WORCESTER COUNTY (MASS.) HORTICULTURAL SOCIETY has issued its schedule of premiums for exhibitions to be held in 1908. The chrysanthemum show takes place November 12. Prizes are also offered for exhibits by the children of Worcester County under 14 years old, to be held on August 1 and August 29, 1908.

heard from later. There is a very large white, the result of a cross between White Perfection and

SOME OF THE MEN WHO WILL TAKE A LEADING PART IN THE PROCEEDINGS OF THE AMERICAN CARNATION SOCIETY AT WASHINGTON, D. C., NEXT WEEK.

Carnation Defiance at Establishment of Jensen & Dekema, Chicago, Ill.

Carnation Defiance.

This is a seedling which flowered first in 1902 and is now in its sixth year. The cross was Estelle on a scarlet seedling, having General Maceo, Mrs. McBurney, Lizzie McGowan and William Scott blood in it. Its habit may be described as a compromise between that of General Maceo and Estelle. It retains all, and we believe more than the free blooming habit of Maceo. It is the same compact upright grower and produces absolutely no superfluous grass. The color is better than that of Estelle and we believe it the brightest so-called scarlet in cultivation. It is early and continuous in bloom. The form is fine and under ordinary conditions the flower reaches a size of three inches. The stem is longer than that of Estelle; in fact, it is amply long, growing from two feet to thirty inches. The plant has a fine constitution and is free from disease. We now have a bench in good shape which was grown in the house last year, lifted, planted in the open ground, grown through the Summer and planted in again at the usual time in the Fall.

This variety is not a show carnation and cannot compete on the exhibition table. We believe, how-

ever, that it is the commercial scarlet for all purposes, and we feel sure it will make a record for itself in dollars and cents for those that grow it.

W. N. RUDD.

The accompanying photograph taken at the establishment of Jensen & Dekema, Chicago, joint introducers of the variety with Mr. Rudd, on January 17, shows benches of the variety after a day's cut had been taken. The long, graceful stems, large flower heads, and profusion of bloom are all plainly noticeable in the picture. Mr. Jensen expects to make a creditable exhibit of Defiance at the Washington convention of the American Carnation Society, accompanying it in person.

House of Carnation Afterglow.

The illustration herewith shows a house of Afterglow carnation that was planted on August 8, 1907, and photographed seven weeks later. These plants were propagated the first week in April, potted in 2 1/4-inch pots May 10; and planted in the field June 2. The blooms could be cut with stems ten to fourteen inches in length at the time the photograph was taken.

Carnation Miss Sarah Hill.

(See Illustration, page 111.)

Our illustration shows a bloom of carnation Miss Sarah Hill, a variety raised and being introduced by the B. K. & B. Floral Company, Richmond, Ind., who describe it as follows:

"The color of Miss Sarah Hill is a pure white, with enormous flowers, measuring as large as 4 1/4 inches, with a full center and a broad guard petal, which gives it a grand form. The stem holds the flower up in grand shape at all times and is 24 inches in length, even giving long stems early in the season. The growth is ideal, having the dark green cast to the foliage that the growers all like so well. The plants are quick to recover after planting from the field, also from the sand. It produces more flowers than Enchantress, even doing better than Enchantress during the dark days of Winter.

"It has stood the necessary test as to its shipping and keeping qualities, and has been satisfactory in every case, leaving one with no fear whatever. It has scored as high as 91 points. It has been termed by all who have seen it the grandest white yet raised, and also as wonderful in the way it produces flowers and the flowers being so large."

Miss Hill's opinion of this carnation is contained in the subjoined testimonial:

"I am glad to say that I consider your white carnation named for myself one of the handsomest that I have yet seen. In size, purity of color, form and effectiveness it leaves little to be desired, while from its appearance in the bench, every time that I have seen it, I judge it to be very free in production of bloom.

"With my best wishes that it may prove a successful commercial white, and thanking you for the courtesy of the name.

SARAH A. HILL."

Carnation Defiance.

Grown by Jensen & Dekema, Chicago, Ill.

Cockcroft's New Carnations.

(See Illustrations, page 111.)

FAUST.—This variety is a brilliant scarlet, a shade brighter than Victory, with long and wiry stems averaging 20 to 24 inches. The flowers are of medium size, well built up with a perfect calyx. It is a strong, healthy and clean grower, coming into bloom very early, and its extreme productiveness makes it very desirable for commercial use, especially for the Christmas trade when it is in full crop.

GEORGIA.—Among all the various whites on the market, Georgia stands in a class by itself, as it is a commercial variety in productiveness and a fancy one in size, fragrance and form. This variety I intend to introduce next year.

Northport, L. I.

J. D. COCKCROFT.

For the most complete report of the proceedings of the American Carnation Society's convention at Washington, D. C., January 28 to 30 inclusive and for the fullest account of the annual exhibition, see The Florists' Exchange of next week. It will, as always, be an issue worthy of preservation for future reference. This also means that it will afford one of the best opportunities of the year for carnation specialists to advertise their offerings. Don't miss this excellent chance of bringing your goods to the notice of the largest number of the best carnation buyers in the country. The Florists' Exchange covers the whole field. Its Carnation Numbers are always eagerly looked for.

The Production of Easter Lily Bulbs in the United States

In our issue of January 18, 1905, we published extracts from Bulletin 120 of the Bureau of Plant Industry relative to the production of Easter Lily bulbs in the United States, prepared by George W. Oliver, in which reference was made to the localities in which experimental tests in growing these bulbs had been made. We now reproduce herewith the results of these tests, so far, as given in the bulletin, along with other instructive data taken from the same document, all of which will be found interesting and instructive reading.

The Most Suitable Localities for Lily Bulb Growing.

Although enough has not been done in an experimental way to ascertain all of the localities where lilies can be grown successfully, it may be stated that the lily seedlings have shown great vigor where the winter temperature does not fall below 24 degrees F. Below that point the plants get a check to their growth and the foliage puts on an undesirable yellowish tinge, which remains during the winter.

In Florida, seed sent to persons who undertook experimental work has not given good results. The northern and central parts of the State occasionally get much too cold to insure strong winter growth. In the southern part where seed has been sent the reports of those who were experimenting are not very favorable. However, most of those who grow the seedlings were absent during the summer, in which season the growing plants need very close attention. It is possible, therefore, that the failures may be charged to want of attention at critical periods.

At Miami, Fla., the temperature is neither too hot in summer nor too cold in winter for growing bulbs. During the period from September, 1895, to December, 1903, the temperature fell below the freezing point on only two occasions, the lowest being 29 degrees F. Under such circumstances the bulbs will do well provided they receive the necessary attention.

At Key West, Fla., the conditions are ideal, closely approaching those at Bermuda, the extreme range of temperature in thirty-three years being from 11 degrees to 100 degrees F., and the extreme range of precipitation 21.1 to 58.4 inches. On the large keys near the southeastern coast of Florida the seedlings do remarkably well, but the climatic and other conditions during the growing season are such as to practically prohibit good cultivators from locating there.

In the northwestern part of the State of Washington the seedlings do not stand the winter without protection. However, bulbs planted deeply in the fall make fine roots and develop well the following year, making excellent bulbs late in the season, but much too late for early forcing.

In many parts of California, especially in the hot interior valleys, where good soil and plenty of water are available and the winter temperature is not too low, the seedlings thrive well. At Loomis, a few miles northeast of Sacramento, the soil and climate are well adapted to their needs. Some areas in that vicinity are nearly frostless, and the lilies come into flower as

carrying on of the work here, not for the raising of bulbs from seed. The seed would germinate well, but when it came to planting out the seedlings in Spring the farmers and florists could not be brought to believe that it was possible in twelve months' time to raise a flowering plant from a seedling not more than 2 inches high. One firm had grown seedlings in the condition two years ago, but not one was put out in the field. Fortunately, however, a few capable men were found who carried out the instructions of the Department, but even then another difficulty was encountered, for when the lilies came in flower twelve months after planting the seedling, the price offered by retail florists for the blooms was a temptation

Beds versus Rows

The question of growing lilies in beds or in rows is a matter of considerable importance, especially in the north. In the south, the question is more a matter of convenience than of necessity. In the north, the beds have the advantage of being more compact and the plants are planted much closer together. The plants are partly shaded and the ground and the lilies protect each other so that they are not likely to be whipped about by the wind, moreover, by the bed system more bulbs can be grown to the acre than in rows wide apart. The foliage of bed-grown plants is unquestionably of a deeper green than that of plants grown in rows. In irrigating, the sunken spaces or alleys separating the bed can be used to convey the water. In Bermuda, the lilies are all grown in narrow beds and no irrigation is practicable, much to the detriment of the crop at times. Growing lilies in beds with hand cultivation is necessarily more expensive than in rows wide apart with horse cultivation, but it is likely to be found that the additional expense attending bed culture will be more than warranted by the returns, as this crop must not be viewed in the same manner as the ordinary field crops which yield \$20, \$30, or \$100 to the acre. It is considered in Bermuda that an acre of lilies is not much of a success unless it yields from \$1,000 to \$2,000.

Size of Seedlings at Time of Planting.

The seedlings at planting time are necessarily very small, having only a few very short and narrow leaves. In fact, they seem anything but promising, and to one who has not had experience in this line of work the appearance of the seedling plants would very naturally tend to discouragement. The rows in the beds should be about 8 inches apart, and the plants at least 5 inches. If the soil is loose and easily worked, they can be put in by hand; otherwise a short trowel is the handiest tool. Care should be taken not to have the seedling bed too wet at the time of transplanting, as this has a tendency to make the plants flabby. Water should be given as soon as they are put in the ground.

The Pollination of the Flowers.

To insure the production of seed, the flowers must be artificially pollinated, as capsules are rarely formed without this operation. The pollen is not scattered by wind to any extent and insects evi-

Carnation Miss Sarah Hill.

Originators and Introducers, B. K. & B. Floral Co., Richmond, Ind.

which few could resist. One florist cleared \$250 in the Spring of 1907 for flowers from seedlings on a space 25 by 15 feet, and this was only for the flowers he did not want for seed. The removal of flowers and stems, of course, results in bulbs of an inferior grade.

Those florists who have grown the seedlings from the bulbs alone are more than pleased with the results. This has been done in the vicinity of Santa Ana, where the soil and climatic conditions are evidently very favorable. Many of the bulbs harvested were of the 7 to 9 inch grade. One bulb in three years from seed measured 14 1-2 inches in circumference when harvested, grown at Santa Ana, Cal., by Edgar A. Metcalf. The bulbs secured from these sources force well, and being almost free from disease the loss on this account is small.

At Ventura, Cal., the conditions are extremely favorable for the production of strong, healthy growth, but the bulb mite put an end to the experiment in that section the second year. It should be mentioned, however, that the soil in which the bulbs were planted had been used for callus for several years.

At Longbeach, Cal., the growth made by the seedlings before planting out was very favorable, and probably a little distance from the shore in good soils the lilies would thrive well. At Yuma, Ariz., the growth made by mature bulbs planted for seedling promises well, and it is probable that the bulbs can be grown there to mature quite as early as those from the Bermudas.

In the extreme southern part of Texas the possibility of producing good bulbs would seem very encouraging, but the facilities for testing have been anything but satisfactory. The farmers are men who grow crops on a large scale as a rule and a few hundred lilies are apt to receive but scant attention at critical periods, especially when staple crops are being attended to.

At Brownsville, Tex., one can see in the old Spanish gardens very healthy longitum lilies in bloom during the first half of April. The growth is very strong and absolutely free from even a trace of disease. On January 15, 1907, some bulbs of the Harrisii variety planted near Brownsville had made a strong growth, averaging 7 inches in height. These bloomed about the end of March and seeded fairly well.

Unfortunately, the temperature in the southeastern part of Texas is not very favorable, judging from the records supplied by the Weather Bureau. Some years the crop will turn out satisfactorily, but there always exists a danger of low temperatures, on account of which it would be unsafe to attempt cultivation on a large scale.

The Preparation of the Soil.

The preparation of the soil in the field should be attended to much in advance of the time the seedlings are ready to be planted out. If after a very heavy manuring a crop of potatoes or cabbage be taken from the ground, it will be in good order for the reception of the seedlings. In well-compacted soils a heavy crop of cowpeas or other legume, deeply plowed under the previous summer should bring about good results. Immediately before planting, the soil should be worked by disking, rolling and harrowing to make it smooth and easy to manipulate when putting in the seedlings.

Carnation Faust.

Grower and Introducer, J. D. Cockcroft, Northport, L. I.

Carnation Georgia.

Grower, J. D. Cockcroft, Northport, L. I.

early as anywhere in the State, with the possible exception of the foothills near Los Angeles. So far, none of the seedlings have been grown at Loomis, but judging from the growth made by mature bulbs sent there for seedling purposes and comparing it with that made in other sections the advantage lies with the Loomis locality. Very little disease was apparent in the foliage, and the flowers were open several days in advance of those from bulbs planted at the same period in the valleys of the southern part of the State.

At several places south of San Francisco selected for experimental work, it was impossible to secure the

dently visit the flower without accomplishing a satisfactory transfer of pollen from the stamens to the stigmas; therefore, it must be had to hand pollination. This consists in taking three or four stamens between the thumb and forefinger and rubbing the anthers, which are copiously supplied with

Clothhouse used at Santa Ana, California, in the Raising of Seedling Lilies previous to Planting in the Field.

Reproduced from Bulletin 120 Bureau of Plant Industry
Dept. of Agriculture.

pollen, against the viscid surface of the stigmas. It is best to transfer the pollen from the flowers of one plant to those of another, as the flowers then set seed better than when the pollen of one flower is transferred to the stigma of the same flower or to other flowers on the same plant.

The best time to select pollen is when anthers have shrunk considerably and the pollen adheres to them in great masses. This should be applied to the stigmas shortly after the segments of the flowers open; the stigmatic surface will then be covered with a viscid substance which enables the pollen to adhere very easily. After pollinating the flowers on outdoor-grown plants it is advisable to cover them with paper bags. This is not necessary with plants grown in the greenhouse.

When the flower is ready for pollen it usually occupies a horizontal position, and when the pollen has performed its mission the capsule gradually assumes an upright position, indicating that fertilization of the ovules has taken place. Not more than four capsules should be allowed to mature on one plant, as the production of seed seems to be a considerable drain on its resources.

The time required to ripen seed outdoors varies with the climatic conditions. In a greenhouse the seed ripens in about two months after fertilization is effected. Those plants which set seed do not go to rest at the same period as those without seed capsules, but remain fresh and green for several weeks after the others have matured.

The ripening of the seed is indicated by the capsules turning from green to a light brownish color and splitting open at the top. They should then be gathered into a bag or box and spread out to dry. When dry the seeds should be removed from the capsules and stored in a cool, dry place until sown. The plants selected for seed bearers should not

Two-Year-Old Hybrid Easter Lily Plant with 35 Flowers. Grown at Ventura, Cal.

Reproduced from Bulletin 120 Bureau of Plant Industry
Dept. of Agriculture.

be subjected to checks during the growing period. Water should be given when necessary and the ground cultivated as soon as possible afterward. A mulch of very old stable litter helps to keep the soil cool and moist. Observance of these details will give the best seed-producing conditions; otherwise the capsules will not fill satisfactorily.

Sowing the Seed.

The seed should be sown as soon as ripe, which is usually about the latter part of August or the beginning of September, in a place where close attention can be given to shading, ventilating, and watering. The method which has given most satisfaction in California is to sow the seed in well-prepared ground covered with a cloth house. This is easily and cheaply constructed.

The roof should be high enough from the ground to provide plenty of space for a person to move around without stooping. The soil should be about 6 inches deep, on top of about 8 inches of stable manure. The bed should be raised above the surface of the ground 3 or 4 inches and edged with narrow boards a few inches above the paths; these will keep the soil in position and give a neat appearance.

The soil should consist of sandy loam mixed with screenings of dried horse manure, not for the purpose of enriching the soil, but to make it porous and easily worked. Fresh manure is injurious to the young plants. Make the surface of the beds level with a garden rake, sow the seed thinly, and press down with a piece of board. The seeds should then be covered with one-half inch of soil and coconut fiber in equal parts; ground redwood bark will answer the purpose quite as well, the idea being to keep the surface porous.

Water should be given through a fine sprinkler whenever the soil shows indications of becoming dry. The seeds should germinate in from three to six weeks. In April, or as soon as the weather will permit, the cloth may be removed gradually in order to harden off the young plants previous to planting out. The seeds may also be sown in a frame built and covered so as to exclude sunshine and heavy rains while germination takes place; and while the plants are small care should be taken not to have the seed beds too wet at the planting-out period, as in this condition the seedlings are more easily wilted than otherwise when put in the field.

Pricking Off the Seedlings.

It is a question whether or not it pays to prick off the seedlings previous to planting in the open field. Judging from the behavior of most other crops so treated, one would suppose that it would be the best practice.

Those of the seedlings which were pricked off the past season undoubtedly showed stronger growth than those left in the seed beds till planting-out time, but it is claimed the operation does not show any beneficial effects on the plants a few weeks after being in the field. At any rate, there is much to be gained in thinning out the seedlings and pricking them off when they come up too quickly in the seed bed.

San Jose Scale and Horticulture.

Editor Florists' Exchange:

While I agree with the statement in a recent issue of *The Florists' Exchange*, by Mr. Powell, that orchards are destroyed all over the country by this pernicious scale; information as to the best methods of combatting and keeping it in check constantly appear in all kinds of publications all over the United States; therefore there is no excuse whatever for these depredations. They simply mean neglect. This work also imposes, that unless it is done in an intelligent, systematic and conscientious manner, it is time and labor wasted; the destruction of orchards naturally results, accompanied with the spread of these pests to other trees.

Horticulturally considered, this pest has received more than a proportionate share of attention, for any information concerning it is easily procured. There are other trees, shrubs and conifers attacked by various insects, borers, and scale which are very destructive and which we seldom read anything about; nor are they considered important. All the literature bearing on these topics is largely and almost exclusively devoted to the treatment of fruit trees, as if our beautiful trees and shrubs are of no value; profit being of paramount importance and the dominating feature of all these publications, while true horticultural interests are neglected.

It occurs to me at this time, that this word "horticulture," as frequently used, is a misnomer. For instance, the Pennsylvania Horticultural Society is, to all intents and purposes, a society of fruit grow-

Interior of Clothhouse, containing 100,000 Seedling Lilies, ready for the Field.

Dept. of Agriculture.

ers, while the Philadelphia Horticultural Society is interested solely in plants, flowers and trees of an ornamental nature. Fruit growing is all right, but it is not horticulture. I once joined a so-called horticultural society, of this fruit growing kind, and traveled 50 miles to attend its meetings; but not being in the fruit business, I dropped it. I consider the use of the word a misrepresentation, and I protest against employing the good old name in this way. Why not call them "pomological societies"? which they certainly are.

Leading horticultural papers do exactly the same thing. Under this heading for two years I noticed nothing but fruit growing discussed. I dropped this paper. It is a pleasure, however, to acknowledge the merits of *The Florists' Exchange* in this particular. I consider it a typical commercial horticultural publication. I for one value and appreciate its original, practical and up-to-date articles; the information given is reliable and dependable, and of material benefit to its subscribers. There are, however, outside the fold thousands of persons interested in trees, plants and flowers, not reached by the trade papers; I think this a neglected field. Local papers often publish useful notes on these subjects, yet they frequently display gross ignorance concerning them resulting in information being given that proves misleading to the enthusiastic amateurs, who give up in disgust. One instance: Last Fall I saw it recommended in a prominent Philadelphia paper to dig up the Shasta daisies, pot them, and if placed in a warm window they will flower freely all Winter. They won't.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

A Plant Market for New York.

Having some acquaintance with the Covent Garden plant and flower market of London, England, it has always been a source of wonder to me that a city like New York should have gone so long without an emporium of this kind. There is no doubt in my mind that this city is one of the greatest consumers of plants and flowers in the world, and although the volume may not be as large as that of London or Paris, I will venture to say there is more money spent here for that purpose than in either of those two cities. Attempts have been made in the direction of establishing a market here, mostly resulting in dismal failures. Individuals have tried to work up a plant trade, but their places have been too small and so poorly patronized by the retailer that they have generally been driven into the retail business to keep themselves alive. The latest attempt in this direction is a store opened on West Twenty-seventh street, New York, a few weeks ago by an association of plant growers. It opened with a flourish, and everything looked rosy at the beginning. The attendance was fairly good; the growers themselves condescended to put in an appearance; some buyers were there, and others called again. I visited this store this week, and marked a deplorable difference; the place was practically deserted, the growers were conspicuous by their absence, some not even being represented, either by plants or salesmen. The place had a forlorn look. The plants were dusty and shopworn and not a buyer was in sight. All of which is a great pity. [These conditions have considerably improved since these notes were written. Ed.]

My first visit to this market gave me hope; I looked upon the venture as a good thing for the retailers, and it is; but they do not seem to realize what the growers are trying to do for them. These growers are putting their goods at the retailer's door, saving them car fares, telephones, and delays. They should have received every encouragement; the retailer should have made it his business to go down there and give his order. It is true the place is small, and does not allow any great display of plants, but it is a brave beginning; an embryo worthy of encouragement.

But the growers must not lose heart. This has been an exceptionally bad season all around, and is not a fair test of what ought to and can be accomplished along these lines. Bring in your plants, and if you do not sell them within a reasonable time take them away and bring in some more. It is no inducement to any buyer to go into a place and see a lot of dusty plants; he certainly could hardly be expected to return.

The growers in the vicinity of London send in a load of plants every morning—ferns, palms, flowering plants or whatever may be their specialty. These will probably be sold before seven in the morning. The market opens, I believe, at four a. m., and everything not sold is loaded up and taken back to the greenhouses, so that it suffers very little, if at all. It is a poor plan to leave plants until they are unsalable; it gives a bad impression to the visitor.

I firmly believe the association has made a beginning in the right direction, and I appeal to the retailers to give the effort their support and encouragement. It is surely a good thing for them to have a nice selection of plants right here in New York, and if they buy from this source the supply will naturally improve as the demand increases. Although the place is small now, there has been a good representative lot of plants there, and with a little support this will be kept up, and should be kept up. We cannot begin with a Covent Garden market, but we have made a start and by perseverance, who knows but what we may have even better than a Covent Garden, where we may all go and make our daily purchases of plants and cut flowers, without diving in and out of numerous stores. All that is necessary is organization and a start; and it looks as if the plant growers are going to get there. We can only hope for the best.

D. RAYBUN.

Our London Letter.

BY A. HEMSTLEY.

In my first letter of the new year I must thank the Editor first for his kindness, and next those whom I have come in contact with on this side who have expressed their appreciation of my notes, and wish all prosperity and continued success to 'The Florists' Exchange.'

On this side we are likely to have a busy year among horticulturists. The shows and meetings of the Royal Horticultural Society become of more importance year by year, and the other independent societies, such as the Carnation, Sweet Pea, Dahlia, and Auricula, all find a good home at the new horticultural buildings. The National Chrysanthemum Society has not come into the list, but it seems likely that this body will be making no progress unless some arrangements are made whereby its shows can be held in a more central position. Already I find that many growers prefer to exhibit at the ordinary fortnightly meetings of the R. H. S., rather than to go to the Crystal Palace, though it must be said that the Crystal Palace Company give liberal support and every possible assistance to the large trade exhibitors.

SWEET PEAS. There will be a big rivalry among sweet pea raisers. I find that in several cases we are likely to have very similar varieties, under the same names. It would be much better if an arrangement could be made by which new varieties should first be shown under color name only. We get them from all parts, and many raisers have no opportunity of seeing what others have previously shown. On one occasion last season I had a conversation with Miss Willmott, and this lady, whose opinions are of some weight, remarked that it was most perplexing to make a selection and keep within a limited number of names (not varieties, for there are so many names for the same).

BEGONIA GLOIRE DE LORRAINE. In this plant we have a similar difficulty. During the past season we have had several sports before the Royal Horticultural Society's committee; these have come from various sources, but they have all proved to be too much like Rochford's Masterpiece to deserve distinction or new names. For a market plant the variety Mrs. Leopold de Rothschild will want something good to beat it, for it stands so well, and produces such a mass of bloom. It is hardly necessary to refer to the many disappointments that have occurred among those who have had chrysanthemum sports after cherishing them for a time, and then to find that others have precisely the same thing. It is much the same with other plants. One of the most remarkable instances I have heard of was with *Gymnogramma gloriosa superba*. This beautiful and distinct fern was of garden origin, and occurred in two widely divided districts at the same time. The same thing has occurred with other ferns. This brings up the question of plant breeding! There can be no fixed rules, or rather no definite results from following fixed rules. I have found that careful selection from original stock for propagating from will prevent deterioration, and for seeding purposes selected types will be more satisfactory than cross fertilization. Unless there is some distinct object in the latter, I have had the best results when taking the best types in regard to habit to seed from and the pollen from a deeper or brighter shade of a similar color; and when selecting from large batches of seedlings those which come into flower earliest are the most desirable for seeding from, that is, if quality of flowers is good, but in some plants a few rogues may flower earlier than the best type. Foliage will often prove a good indication of what may be expected of the flowers.

ZONAL PELARGONIUMS. The week before Christmas there were some well flowered pot plants of Mrs. Lawrence in the market. This variety has not proved a general favorite for Spring work, but if it can be flowered well at Midwinter it will be of great value, for we have not previously had a good salmon, or, in fact, very few other zonals that would flower at this time of the year, except when grown on for cut bloom only. Messrs. Cannell & Sons have shown us what can be done in the way of cut bloom. At all the recent R. H. S. meetings and at the chrysanthemum shows they have staged large collections—the size of the trusses and also the individual flowers have been quite equal to what we see in the Summer, and the colors of some certainly brighter than when we get more hot sunshine. Among varieties noted were Caronia, a very fine shade of pink, and large flowers; Arabia, bright scarlet with a white eye; Cecilia, salmon, large trusses; Cymric, crimson, with the most distinct blue violet shade; King Victor, bright clear scarlet; Saxonia, another fine scarlet; Bowood, crimson; Claremont, white; Lady Folkestone, bluish pink; Helen, Countess of Radnor, rosy cerise; Mauretania, white shaded rose; Queenswood, salmon; St. Louis, deep scarlet. Many other good sorts might be added, the older kinds, such as Duke of Bedford, Sir T. Hanbury, Captain Halford, Countess of Hopetoun, Snowstorm, Mrs. Brown Potter, which has already become a favorite for market. The semi-doubles do not flower so well at Midwinter.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of reasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

CLASSIFIED ADVERTISEMENTS

Cash with order.

The columns under this heading are reserved for advertisements of Stock for Sale, Stock Wanted, Help Wanted, Situations Wanted or other Wants, also of Greenhouse, Land, Second-Hand Materials, etc., For Sale or Rent.

Our charge is 10 cts. per line (7 words to the line), set solid, without display. No advt. accepted for less than thirty cents.

Display advertisements, in these columns, 15 cents per line, count 12 lines agate to the inch.

(If replies to Help Wanted, Situation Wanted, or other advertisements are to be addressed care of this office, advertisers add 10 cents to cover expense of forwarding.) Copy must reach New York office 12 o'clock Wednesday to secure insertion in issue of following Saturday.

Advertisers in the Western States desiring to advertise under initials may save time by having their answers directed care of Chicago office at 4543 Cottage Grove avenue.

SITUATIONS WANTED

SITUATION WANTED—By good grower of carnations, chrysanthemums and general stock. Address, E. C., care The Florists' Exchange.

SITUATION WANTED—By first-class rose and carnation grower, able to take charge. Good designer. Address, F. Stevens, 527 West street, York, Pa.

SITUATION WANTED—By single man, aged 32, on private or commercial place. Address, H. B., care Beechwood Farm, R. F. D., No. 2, Sharpsburg, Pa.

SITUATION WANTED—An experienced steady rose grower wants section on up-to-date place; \$15.00 weekly. Address, Marshall & Company, 116 West 23d street, New York City.

SITUATION WANTED—As head gardener on private place, experienced in forcing and outside. Married, no children; very best of references. F. Schultz, 461 Ocean Avenue, Jersey City, N. J.

SITUATION WANTED—By experienced grower of roses, carnations and general stock; commercial or private. Married, sober, trustworthy. State wages. Address, A. A., care The Florists' Exchange.

SITUATION WANTED—By a German gardener, 10 years' experience in every branch of the business, on private or commercial place. Single, aged 26. Address, Wm. Dumanowski, Collinsville, Conn.

SITUATION WANTED—As foreman or section man; roses, carnations, chrysanthemums and general stock. Twenty years' experience. German, 35, married. Address, E. B. E., care The Florists' Exchange.

SITUATION WANTED—By Belgian; private place preferred. Has complete knowledge of growing all plants, outside and under glass. Good references. Address, Alphonse Anthelot, 335 West 34th street, New York City.

SITUATION WANTED—By practical, all-around florist, successful grower of general commercial greenhouse stock; five years in present position as foreman. German, 39, married. Frederick Braun, 120 Alvarado avenue, Worcester, Mass.

SITUATION WANTED—In florist store by florist and landscape gardener; good appearance. Experienced in conservatory work and making-up of jardiniere and baskets. Address, L. B., care The Florists' Exchange.

SITUATION WANTED—Young man, 24, strong, willing, honest and sober, wishes position on commercial place. Has been employed about three years on small private place. References. Chas. A. Peterson, 244 5th Avenue, Brooklyn, N. Y.

SITUATION WANTED—By gardener, thorough knowledge of landscape work, greenhouses, flowers and vegetables, trees, shrubs and hardy perennials. Capable of managing a first-class private place. Best of references. Address, O. O., care The Florists' Exchange.

SITUATION WANTED—As foreman on large nursery where a first-class propagator is appreciated. Capable of taking full charge of any sized place, greenhouses and outside. Used to handle men to the best advantage. Address, S. W., care The Florists' Exchange.

SITUATION WANTED—As foreman on commercial place, having 15 years' European and American experience. Good grower of general stock and forcing bulbs, lily of the valley, etc. Three years in present place; good reference. Hollander, aged 71, state full particulars in first letter. Address, J. P. Nallen, care H. H. Batters, Newtown Square, Pa.

SITUATIONS WANTED

SITUATION WANTED—By a practical grower of roses, carnations, chrysanthemums, ferns, palms, Christmas, Easter and bedding plants. Good propagator and designer. Aged 38; four and one-half years in present place. Competent to take charge of wholesale or retail place. Address, E. F., care The Florists' Exchange.

HELP WANTED

WANTED—A first-class rose grower, one with experience. New houses, good helpers and good wages to capable man. Honaker, The Florist, Lexington, Ky.

WANTED—Rose and carnation grower for section; married man with small family. Wages, \$14.00 per week. Address, Pennsylvania, care The Florists' Exchange.

WANTED—Decorator and designer, one who has some knowledge of plants. Single man preferred. References and wages first letter. Address, R. K., care The Florists' Exchange.

WANTED—Intelligent man to act as shipping clerk and porter in New York seed store. State qualifications and wages expected. Address, X. X. X., care The Florists' Exchange.

WANTED—By February 1, single man as assistant on private place who can grow roses, carnations and chrysanthemums. Wages, \$50.00 per month; board, \$18.00. Oscar Carlson, Box 238, Fairfield, Conn.

Write for information and prices. Wm. H. Lutten, Opp. West Side Avenue Station (C. R. B. of N. J.), Jersey City, N. J. Telephone 412 Bergen.

CHANGES IN BUSINESS.

GREEN BAY, WIS.—Charles DeClerc is building a large modern greenhouse, just north of Fort Howard Cemetery, and will enter the florist business, with an office in the Hoffman building on North Adams street.

COLUMBIA CITY, IND.—Oliver H. Diffenderfer has disposed of his interest in the Wagoner Floral Company to his partner, Albert J. Wagoner, who will continue the business as sole proprietor.

DERRY, N. H.—The greenhouse property owned for some time by Royal G. Dowser has been sold by him to W. J. Kingsbury, who has had considerable experience in the work and will either hire a man to operate the plant or lease it outright to some one who understands the business.

HAMMONTON, N. J.—Watkins & Nicholson have opened a florist store at 113 Bellevue avenue in connection with their greenhouses, where they keep an assortment of plants, cut flowers, etc. The greenhouses are about a mile and a half from the town center or business part, too far for people to come in winter and bad weather. They have a very attractive store and window, something quite new here.

FIRMS WHO ARE BUILDING.

NAHANT, MASS.—Thomas Roland is adding to his establishment a greenhouse, 140x45 feet.

WOBURN, MASS.—Adam Foster's two new greenhouses are nearly completed; he expects to build two more.

PORTSMOUTH, VA.—Messrs. D'Alcorn & Sons, bulb growers, are completing a new house, 28x21 feet, 16 feet at ridge.

COLUMBUS, O.—The city council recently passed to its second reading an ordinance to appropriate \$5,775 for the construction of a workshop and greenhouse at Schiller Park.

TWO RIVERS, WIS.—Louis Hartung has completed the work of rebuilding his greenhouses destroyed by fire about a year ago. He has also completed a handsome new residence at Floral Park and will shortly occupy it with his family.

FOR SALE

PIPE Good serviceable second hand. No Junk, with new threads, 1 in. 3/4c.; 1 1/2 in. 4 1/2c.; 2 in. 5 1/2c.; 2 1/2 in. 10c.; 3 in. 14c.; 4 in. 19c.; per ft. New 2 in. Standard stem, 11c. All kinds of fittings for 4 in. cast iron and all sizes wrought iron.

STOCKS AND DIES New Economy, easy \$4-1 in. \$3.00; No. 2 cuts 1 1/4-1 1/2-2 ins. \$4.00; Armstrong Adjustable No. 2 cuts 3/4-1 in. \$4.00; No. 3 cuts 1 1/4-1 1/2-2 ins. \$6.50. Second-hand Armstrong, No. 3 \$5.00; No. 2 \$3.00.

BOILERS one 12 in. grate, new round boiler, will heat 650 sq. ft. of glass, \$30.00; one 16 in. grate, new round boiler, heating 900 sq. ft. of glass, \$40.00. 1 No. 531 Richardson, five section water boiler, grate 20 by 28, heat about 5000 sq. ft. of glass, used one season, \$125.00. 1 American Radiator Ideal, eight section water boiler, grate 67 by 49, heat about 15,000 sq. ft. of glass, price \$225.00. 1 Pierce Butler and Pierce Sterling Round Sectional boiler, grate 20 inches, heat about 1800 sq. ft. of glass, price \$50.00. The above boilers are guaranteed to be in good condition. We have other sizes and makes; write for prices.

Plant Notes.

ACHIMENES.— With the observable tendency to obtain something out of the common run of plants for decorative purposes it is no wonder that such beautiful subjects as achimenes undoubtedly are should receive some attention. Achimenes are tuberous plants and die down annually; and having reached that stage should be stored away in dry sand, or they may be left in the pots and kept dry where the temperature will be about 50 degrees. In early Spring they should be started into growth by placing the tubers thickly in pans previously three quarters filled with sand, with drainage material provided. It is only necessary merely to cover the tubers with sand. The pans when filled should be placed in a temperature of at least 65 degrees, where in a short time they will begin to make growth. When growth has been made to the extent of an inch or two, the question of the final disposition as regards potting of the plants will come up for consideration, in determining which it will be necessary to know definitely the kind of specimens required as well as a distinguishing knowledge of the varieties under treatment.

Dwarf varieties such as Tyrianthina, Dazzle, etc., are more suitable for small pans, or 5 and 6-inch pots, while the larger varieties should be given larger pans or pots. However, the former matter is settled when the time comes for putting the plants into the receptacles in which they are intended to flower. From six to twelve, depending on the size of the pot or pan, should be placed in each of such. The receptacles should have ample drainage, and over that should be placed a layer of turfy material or sphagnum moss. The pots or pans should be filled to within about two inches of the rim with soil composed of good fibrous loam two parts, leaf mold two parts, and one part sand; then the plants of the requisite number at equal distances apart should be put in, covering the roots with about an inch of the compost, taking care to firm it over the roots, but not to the extent of severe hardening. When the work of filling the receptacles with plants is completed they should be placed on a shelf, or anywhere near the glass, in a temperature similar to that wherein they started to make growth. After the plants are about six inches in growth they will be subsequently benefited in appearance if the points are pinched; this will induce them to make several shoots. The small growth taken off in this operation can be rooted in sand if desired.

At all times while growing achimenes require to be well supplied with water; they should also be frequently syringed until they come into flower, but not thereafter. For specimen plants staking should be early attended to, but when they are desired for drooping over in pans or baskets, no staking is needed.

After the plants show flower frequent applications of manure water will be beneficial and needful. When the plants are needed for decoration they should be hardened a little before being removed from their growing quarters.

MEDINILLA MAGNIFICA is surely one of the most gorgeous of flowering shrubs from the Philippines. This plant is not very often seen in either trade or private collections, although its merits, as well as the ease with which it can be successfully cultivated, would seem to make it a plant more generally grown. It has beautifully glossy, leathery foliage springing from strong shoots. The flowers are produced on well-ripened wood

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

NEW CRIMSON CARNATION
HARVARD

New Carnation FAUST (BRILLIANT SCARLET) This novelty very fine for commercial use, owing to its extreme productiveness; a fine one for Christmas trade. Color, form, stems, habit and productiveness all that can be desired. Price \$6.00 per 100, \$50.00 per 1000. Usual discount on large orders.

Mr. J. D. COCKCROFT, Northport, N. Y.
Dear Sir: We desire to congratulate you on the two varieties of Carnations, GEORGIA and HARVARD, which you have been sending us. Georgia we consider to be the best white carnation that comes to New York, and can easily sell from 50c. to 100c. more than regular white. Harvard we think to be the best dark red coming here, easier to sell at double the price of any other dark red. With kindest regards, we remain,
Yours truly,
JAMES D. COCKCROFT, Northport, L. I., N. Y.

The color of this novelty is a very rich crimson. The blooms are of the finest as to size and quality and the habit is free and continuous, every shoot producing a flower with a calyx which we guarantee as non-bursting. Blooms borne on long, wiry stems from 24 to 30 inches and over. Price \$12.00 per 100, \$100.00 per 1000. Usual discount on large quantities.

Standard Varieties

	Per 100	Per 1000
Winsor	\$4.00	\$50.00
Rose Pink Enchantress	3.00	25.00
Enchantress	2.50	20.00
Lawson	2.00	15.00
Queen	2.00	12.50
Victory	2.50	20.00
Queen Louise	2.00	15.00
Red Sport	2.50	20.00
Pink Patten	3.00	25.00

The plant can be flowered when quite small; it can also be grown into a large specimen, and in whatever stage it is seen in bloom it never fails to attract attention. The flowers are rosy pink and are borne in pendulous pyramid-shaped panicles, which are very often over a foot in length. M. magnifica is easily propagated from cuttings of young wood, placed in sand in good heat; and from seed.

PEPEROMIAS are useful and accommodating little plants, easily propagated and as easily grown into subjects of utility. Although they are distinctly hothouse plants and require treatment accordingly when in active growing condition, they are very serviceable for dwellings, either as single plants or when made up along with others of less compact habit. These plants are propagated in much the same way as rex begonias. Along with the leaves take about an inch of the stem, which insert in sand so that the leaves will lie hard on it. P. argyrea is the one mostly grown for pot plants. P. maculosa is perhaps a more strikingly beautiful variety than the former, and because of its habit is more suitable for growing in pans.

DIEFFENBACHIAS are quick growing foliage plants. The foliage has a decidedly tropical appearance, and when a number of plants are used in an arrangement they lend a peculiarly luxuriant look to the whole, which makes the effect all the more pleasing. Dieffenbachias in all varieties are readily propagated by cuttings, made of the tops of old plants, or from young growths proceeding from plants hitherto cut down for that purpose. When it is desired to grow the plants on into perfect specimens they should be kept shifted and given good rich soil, as the condition of the roots requires it. Very handsome specimens are often seen resulting from the plants thus grown. If, however, the requirement is more for material for filling in, a more rapid way to that end will be found in placing two or more plants from small pots into a much larger pot or pan; these will be found exceedingly useful for various purposes in a florist's establishment. Care should be taken not to get the varieties mixed while making them up in that way.
D. M.

Healthy Rooted Cuttings
Scranton Florist Supply Co.
SCRANTON, PA.

Introducers and growers of carnations who supply the trade with rooted cuttings will find this a very favorable time for placing an advertisement in THE FLORISTS' EXCHANGE.

CARNATION GROWERS

OUR issue for next **Saturday, February 1, 1908**, will contain a full report of the meeting of The American Carnation Society, which is to be held in Washington, D. C., on January 28, 29 and 30, and carnation growers will find in that issue a most timely opportunity to place advertisements of either novelties or standard varieties that they may have to offer. Advertisements should reach us not later than noon on Wednesday next, January 29, or as much earlier as possible.

THE FLORISTS' EXCHANGE, 2-8 Duane St., N. Y.

REVIEW OF THE MARKET

NEW YORK.—While prices for cut flowers are perhaps not what they ought to be, business has been running along fairly smoothly and clearances in most lines have been the rule rather than the exception. Roses are by no means very plentiful; American Beauty have at times touched the 60c. mark in small lots, and Bride and Bridesmaid run from \$10 per 100 down to \$2 per 100. Robert Simpson is sending to Traendly & Schenck a new rose, an offspring from Mme. Caroline Testout, which, owing to its pleasing pink color and other good qualities, is looked upon with much favor by buyers. Killarney, when well grown, always averages a little better price than Bridesmaid; and, although there is quite a large supply reaching here every day, the chances are that by another year a much greater number of Killarney will be grown. The variety Wellesley is not much in evidence, John I. Raynor being perhaps the only dealer who receives this rose regularly.

Carnations are becoming more plentiful and are steadily increasing in vigor as the days lengthen. Enchantress is seen more than any other pink, and in spite of its sleepy tendency, it continues a favorite. Among the favorites received by John Young from the Cottage Gardens Company are Alna Ward, white, and Mrs. Tom Harvey, pink, both of which are superior novelties in their respective colors. Winsor from F. K. Pierson Company is a continual good seller, as also is the variety Welcome from Baillouze Brothers. Ford Brothers are handling a superior grade of Enchantress and other standard sorts from the greenhouses of Hession, the well-known Flatbush grower. W. F. Sheridan has a special line of undisseminated varieties that are always in good demand if there is any business going at all; in fact, as regards really first-class carnations, the city was

never so well supplied as it is at present.

Violets are not bringing any fancy prices, either; from 35c. to 60c. per 100 are the ruling figures, and the last mentioned is an outside price and applies to lots sold in small quantities. E. C. Horan's store is one of the violet centers of the city, B. Slinn and George Saltford also dealing largely in this specialty.

Orchids are a trifle firmer than last week, though values are away down considering the quality of the flowers. James McManus has long made a specialty of orchids, and for variety and continuous supply he is the leader.

Gardenias have shortened up considerably, and prices are firmer. Lilies are abundant and lower in price. Tulips, white, pink, yellow, and red, are all in quantity, and there seems no diminution in the supplies of Paper White narcissus and Roman hyacinths. Smilax, asparagus and adiantum are none of them selling satisfactorily, and fixed prices are out of the question.

CHICAGO.—The first half of the week shows a considerable improvement in the market over the conditions of last week, but without material change in prices. Buyers are more in evidence, and shipping business is heavier. Roses are especially strong, and heavy shipments have been made. The demands of such important business centers as Kansas City, St. Louis and Buffalo have been larger than for some weeks, bodequing an improvement in the retail trade of those centers, possibly due to the passing of the late financial depression. Bride and Bridesmaid, and Killarney roses are plentiful, and the bulk of arrivals appear to be in the

pink of perfection from a growing standpoint. American Beauty roses continue rather too abundant for quick moving, but there are signs of a shortening of the crop.

Carnations are arriving in quantities greater than the market can absorb, but the sacrifice falls to the inferior grades, fine stock moving off without much trouble, although at not over remunerative prices. Red sorts predominate and are called for most; white varieties are on the scarce side.

Orchids are in fair demand, but most of the business offering is from outside points, the local requirements being very small, without apparent reason. Bulbous stock is extremely plentiful and does not command high figures, excepting for particularly fine flowers. Narcissus is in oversupply, and minimum prices govern the majority of sales. Tulips are much improved in quality, and there is greater variety among the offerings. Sweet peas move fairly well within the range of prices quoted, long stemmed stock being most sought. Violets are holding their own this week, without change in prices; locally grown stock, in single varieties looks very attractive. The weather is mild and uncertain with much cloudiness. A few cold days would benefit the market to a great extent. J. H. P.

BOSTON.—There has been quite a good deal of activity all along the line and trade is much more satisfactory than a week ago. In fact some of the staple articles of the trade are inclined to be scarce. Roses are at present the best sellers; American Beauty remain about the same as last week both as regards demand and prices. Richmond and Killarney are very fine and sell well. There is a good call too for Bride and Bridesmaid of good quality. Carnations are more stagnant than they were, and prices are a little lower. Violets are very plentiful and sell at low figures.

Bulbous stock is going fairly well. Lilies are plentiful, as are callas, which are much used at present. Trumpet narcissus and noctius are now both in the market and sell fairly well. J. W. D.

PHILADELPHIA.—We cannot report any improved conditions in the cut flower market. There appear to be plenty of flowers around, this is owing to the limited demand. This week some commission men and growers are trying to get \$7.50 per dozen for American Beauty, but few were sold at that price. Tea roses are bringing from \$12 to \$15 per 100 for the best stock. Carnations run generally from \$3 to \$4, a few Beacon realizing \$8 per 100. Lily of the valley brings \$2 to \$4 per 100; there is too much of it on hand, as large quantities are seen on the street. Tulips sell at \$2 to \$3 per 100; narcissus, Paper White, \$1.50 to \$3. Cattleyas fetch \$10 to \$50 per 100; the supply is plentiful. DAVID RUST.

ST. LOUIS.—The cut flower market was full of everything in the past week, and the wholesalers experienced some trouble in disposing of all their consignments at good prices. The retailers say that funeral work has been quite plentiful, but all other work is somewhat scarce with the downtown trade. Uptown retailers report a number of weddings, receptions and dinner parties booked for the near future. Quite a lot of this kind of work should be on now before Lent sets in. January 23 is McKinley Day; carnations should then be in great demand.

DAYTON, O.—The holiday trade in this city was even better than last year's; also better than expected, considering the financial flurry and scare. Only a few receptions were canceled in the early Winter; otherwise the florists have had an unusually busy season. The plant sales continue to increase each holiday. Holly was of a very poor quality and scarce, which made all other kinds of green more sought after. Matthews the florist had sufficient orders to use up two tons of bouquet green which was made into festooning and found ready sale, 20,000 yards being realized out of the two tons. One hundred pounds makes 500 yards, if not made too heavy. M.

Prices Advertised in these Columns are for **THE TRADE ONLY**—When Writing Please Mention **THE FLORISTS' EXCHANGE.**

New Carnation

DEFIANCE

Brilliant Scarlet

There are seven reasons why you should grow DEFIANCE and they are:

- 1st.** It is by far the best color ever seen in a scarlet Carnation; it is the true velvety scarlet and not red; it will average 3 inches in diameter throughout the season.
- 2nd.** It is unexcelled for productiveness by any Carnation in commerce to-day.
- 3rd.** It is a clean and upright grower, producing an abundance of high grade flowers without any special treatment.
- 4th.** It is in perfect health, and not subject to rust or any other disease, which is very prevalent among scarlet varieties.

- 5th.** It is of perfect form; blooms are very symmetrical, center nicely built up and very full, but not so as to appear crowded; stems are very stiff and wiry, holding the flowers perfectly erect.
- 6th.** It is a scarlet for the entire season; it comes into crop in October and continues through the entire season; it does not lose its color in bright sunlight, in fact, it improves in bright sun when other reds fade.
- 7th.** It is the only scarlet to-day, and by growing DEFIANCE you will be satisfied, as it has no faults, is full of vigor and will do the work where other scarlets fail.

VICTORIA

NEW SEEDLING, crossed by Lawson and Harry Fenn, the color of Lawson and the long stem of Harry Fenn; it is more prolific than either. Lawson is past. Victoria is better than Lawson ever was, and gave us last Winter from 20 to 95 per cent. more blooms each month. It is very healthy and a nice grower. I have two houses of it, and it is a sight to see the buds and blooms. It brings more money in the market than Lawson. Read below what J. A. Budlong & Sons Company of Auburn, R. I. say of it. They are growing it this Winter. J. A. Budlong & Sons Company are one of the largest market gardeners in New England, also the largest rose and carnation growers in Rhode Island.

December 10, 1907.
Mr. J. H. Cushing, Quidnick, R. I.
Dear Sir: We have 1175 plants of your new seedling Victoria carnation which we planted in house the last of July. They

have made fine plants and we think now will produce as many flowers, if not more, than any carnation we ever grew. The stems are stiff and good length. The flower is also a good keeper.

We have sold these flowers in several instances to some of our best trade in Boston, who thought they were a long-stemmed Lawson.

Up to date, we have cut 4768 flowers from the 1175 plants, and there are as many buds in sight to-day as there have been any time since we started to cut. In other words, the cut has been very uniform and looks as if it would continue so throughout the Winter.

We do not think that you will make any mistake by putting this carnation on the market. Yours truly,

THE J. A. BUDLONG & SONS CO.

Price of Victoria rooted cuttings, \$75.00 per 1000; \$8.00 per 100; 250 at 1000 rate.

The Week's News.

It is very pleasing to learn that Park Commissioner Smith is to renovate the worn-out soil in Central Park by sowing forage crops and then plowing them under. This is certainly a successful way and is sure to prove beneficial and of permanent value to the land, and is of a much more practical nature than some of the impractical suggestions offered by experts toward reviving the worn-out soil in this park several years ago. Of course, it is only the lawns and grass plots that can be treated this way. The shrubberies and that part of the park devoted to forestry, which comprise a large acreage, must have been sadly neglected by those in charge for a number of years for the soil to get into such a poor condition as it was proclaimed to be by experts when the examination was made two or three years ago. If, instead of raking the leaves from the shrubberies, they were allowed to remain where they fell and a little fertilizer was added from time to time, the trees and shrubs would thrive better and the soil would not become impoverished, but improve from year to year; and, excepting for the little expense of fertilizer, there would be no need of any large expenditure of funds, a fact that would prove welcome to the tax-payers.

The wholesale plant market at 43 West Twenty-seventh street is now open each day until 4 p. m. The growers who are attending there daily are becoming better satisfied every day with the results obtained, many customers coming in the afternoon that could not attend in the morning, and it is believed now that the market will be a success in every particular.

Mr. and Mrs. Benjamin Dorrance, Dorraoceton, Pa., were in town this week. Mr. Dorrance attended the meeting of the directors of the New York Cut Flower Company, and on Wednesday, with Mrs. Dorrance, left for a visit to Florida.

Cards have been received in this city announcing the marriage of John Radder of the well-known firm of J. Blaauw & Company, Boskoop, Holland, to Miss Jeannette L. M. van Lieshout, which took place on Thursday, the 23d inst. Mr. and Mrs. Radder sail to-day, Saturday, on the steamer Statendam from Rotterdam for New York. On their arrival here Mrs. Radder will remain with relatives in this city, while her husband makes his usual trip throughout the Western States.

A. J. Pieters, president of the A. J. Pieters Seed Company, Hollister, Cal., is visiting the Eastern trade in the interests of his firm.

The Greek-American Retail Florists and Growers' Association will hold its first annual ball in Palm Garden, Fifty-eighth street, between Lexington and Third avenues, on Friday evening, January 31.

Penrose Halokirs, a Greek florist at 145 West Twenty-seventh street, was arrested at Broadway and Forty-second street one night this week as a suspicious person. It is believed he knows something about the theft of \$7,000 worth of leather goods from Mrs. Margaret Casey of 1505 Broadway which occurred last August.

There will be several delegates from this city to the Carnation Society's convention at Washington next week. Eugene Dailledonze and John Riemels will leave Monday, traveling by the Pennsylvania Railroad, on the train known as the Congressional Limited, leaving Cortlandt street at 3:30 p. m. and reaching Washington at 8:30 p. m.

The third annual dinner of the Nassau County Horticultural Society will be held at Glen Cove, L. I., on Wednesday, January 29, at 4 o'clock p. m.

Thieves broke into the offices of The Florists' Exchange and its publishers, The A. T. De La Mare Printing and Publishing Company, Ltd., on Sunday morning last, January 19. Entrance was effected by sawing through the heavy padlock on the iron door. The marauders pried open every desk in the building, but secured but little loot of value. The contents of the editor's desk and its drawers were thrown topsyturvy, but he missed only a box of stub pens and the proverbial blue pencil—two instruments essential in his daily labor; also a small magnifying glass. A duplicate of the latter was also taken from the desk of Mr. Butterfield and a small sum of money from that of the treasurer. Three of the thieves—all

boys—were captured by the police, two others being still at large. Several of the other offices in the same building were also entered, one of them that of the Waterman Fountain Pen Company, and the booty taken from the latter led to the capture of the burglars, who were discovered by a detective selling gold fountain pens on Park Row on Sunday morning at ten and fifteen cents apiece.

The retail trade in Brooklyn is keeping up to its usual volume—much better than it is on the New York side. J. V. Phillips finds no diminution in his business, and is kept hustling every day in the week. He handles a big lot of roses and carnations daily, and none but the very best are suitable for his clientele. The Brooklyn wholesale dealers find business fairly good this week; they have not as yet become associated with the wholesalers' protective association.

A meeting of the creditors of Hicks & Crawback was held on Monday, January 20, before Robert F. Tilney, referee in bankruptcy, in the Post Office Building, Brooklyn. A trustee was appointed and another meeting will be held on Wednesday, January 29, at 2 p. m. in the office of Mr. Tilney, 26 Court street, Brooklyn.

Mrs. Krick, wife of W. C. Krick, manufacturer of florists' letters and other specialties, has been quite ill for some time, but is now recovering rapidly.

Boston.

News Notes.

"Opportunities for Commercial Apple growing in New England" was the subject of the lecture by Professor F. C. Sears, Amherst, at Horticultural Hall on Saturday, under the auspices of the Massachusetts Horticultural Society. The meeting was well attended and there was a spirited discussion. The subject of the destruction of the San José scale was the most important topic taken up. Professor Sears recommended the lime, sulphur and salt remedy, while several of the members preferred scalecide as being much more effective.

The Boston Co-operative Flower Growers' Association will hold a flower show at their market, 1 Park street on Saturday, February 29. The schedule will be ready in a few days and as a lot of fine prizes are offered a good exhibition is assured.

Elijah Cartwright of Wellesley has a seedling white carnation, which he proposes to grow largely next season. It is after the style of White Perfection, but with much more substance, and it bids fair to be one of the leaders.

James J. Casey, "The Rosary" florist, has just completed making enlargements to his store. He now occupies the two numbers at 214 and 216 Clarendon street and has one of the up-to-date stores of the Back Bay district.

The many friends of Bernard T. McGinty, the popular salesman in the Music Hall market, sympathize with him in the serious illness of his twin children who are suffering from spinal meningitis.

Miss Minnie C. Wilson, formerly with Quinlan Brothers, has opened a store at 18 South Common street, Lynn, Mass., and will conduct an up-to-date establishment. She is well known among the trade.

A. Leuthy, Roslindale, is back from a business trip to Philadelphia and New Jersey cities.

Edward McMulkin, who has been confined to his home for nearly two weeks with grippe, is, we are glad to see, back to his store again.

Frank Mitchell, Waterville, Me., and David Lumsden, Durham, N. H., were in town this week.

The very mild weather recently has started outdoor bulbs amazingly. J. A. Pettigrew of the Park Department reports nicking snowdrops January 17, while Robert Cameron of the Botanic Gardens reports both crocuses and snowdrops as being in bloom.

J. W. DUNCAN.

GREENWICH, CONN.—The Gardeners' Society met on January 15, 1908, and elected the following officers: President, Silas Frost; vice-president, Patrick Flaherty; recording secretary, Thomas Young; financial secretary, Peter Crighton; treasurer, Arthur Mead. The proposition to give plants to children was deferred for action, it being desired to hold a conference with the school committee.

Cleveland.
Trade Notes.
Business the past week has been remarkably good all around, the wholesale stores selling out every day about as soon as stock comes in. All flowers are rather scarce, due to colder weather and less sun. In roses, Bridesmaid, Bride and Richmond sell for \$15, \$12, \$8, and \$6 per 100; carnations, white, \$3; Enchantress, Mrs. Lawson, \$1 and \$5. Violets have dropped a trifle and bring from 50c. to \$1.25 per 100. Roman hyacinths and Paper White narcissus realize \$3 per 100. Stevia is scarce; tulips more plentiful. Jonquils are coming into this market slowly.

Joseph Goldsoll, chief of our Park Police, died Friday, January 17, of an old wound received in discharge of duty. He was very popular, and the retail florists had all they could do making designs for his funeral.

Westman & Getz are showing some fine cyclamen, and report business active.
Charles Schwake, with Chas. Meyers, is in Cleveland, also Harry A. Bunyard, of A. T. Roddington, New York.

Baltimore.
The annual meeting of the Florists' Exchange of Baltimore was held this week. The manager's report showed a substantial increase in business during 1907, the gain over the previous year's transactions being 15 per cent. The new directors of the Exchange are: E. A. Seidewitz, president; Board of Directors: F. C. Bauer, vice-president; J. M. Rider, secretary; Wm. G. Lehr, treasurer; Wm. Feast, C. E. Akehurst, Philip B. Welsh, J. J. Perry, manager.
A disastrous fire has almost entirely destroyed our beautiful Masonic Temple on North Charles street; the losses are nearly \$100,000.

Detroit. News Items.

The recent well-attended meeting of the Detroit Florists' Club did not bring forth the desired answer as to which it shall be—a Spring or a Fall show? The committee which had the matter in charge for special consideration favored a Fall show, but the monetary question was a great stumbling block, and the same committee will do some more thinking between now and next meeting.

Business is moving along at an easy gait; everybody is busy with an occasional rush here and there. Prices wholesale and retail are healthy, which after all is the most important feature.

Mr. Rölker of New York is in the city looking after his trade.

J. P. Sullivan ventured out to Mt. Clemens, but returned with a worse cold than ever.

M. Wolf has again a stand on Woodward avenue.

Washington, D. C.

Trade Items. Business opened up briskly during the forepart of last week, but slackened toward the latter part. Prices are still high and while stock is a little more plentiful a scarcity still prevails, and some of the dealers are getting as much as \$1.50 per dozen for the best Eucharist carnations which at this season usually sell for less.

All eyes are now turned on the exhibition of the American Carnation Society; a special meeting to perfect arrangements was held on Tuesday night. Many out-of-town growers are expected to co-operate with the local florists in arranging a very attractive exhibition.

The endeavor of the local club to have a special cavalry exhibition by the Fort Myer troops in honor of the Carnation Society was unsuccessful.

JAS. L. CARBERY.

DAVENPORT, IA.—The Tri-City Florists' Club met on January 8, 1908, at the Turner Hall in Rock Island, being unable to meet with Henry Gaetje as scheduled, on account of sickness in the family. It was decided to hold a banquet at the Manufacturers Hotel in Moline on March 26. Two new members, J. N. Jansen of Holland and Theodore Stock, were voted into the club. Mr. Jansen's home is in Holland, and he is representing the firm of Keur & Son of that country in America.

JEFFERSONVILLE, I. N. D.—John Meyer, florist, who located at Cheyenne, Wyo., has returned on account of his health. He is a victim of rheumatism, and is temporarily located at Charles-town.

Chicago. The Week's News. John Deegan of the Winterson Seed Store is receiving the sympathy of his many friends in the trade on the death of his mother, which occurred early on the morning of January 16. H. N. Bruns will shortly cut some extra fine lily of the valley, from the new season's pipe. A. L. Simmons, florist, West Sixty-third street, is lying in the St. Bernard's Hospital, slowly recovering from an operation. Emil Buettner, Park Ridge, is sending in some grand Bridesmaid roses to the A. L. Randall Company, the stems running to 3 1/2 feet and more. Poehlmann Brothers Company are cutting from a particularly fine crop of Killarney roses. Much of the stock coming to their store counters is extra long-stemmed, with fine heads. They are also handling some unusually long-stemmed freesia, some of the bunches seen on Monday having stems fully 24 inches in length. The J. B. Deamud Company was headquarters this week for tulips, the receipts covering stock of a variety of colors, and well-stemmed. The A. L. Randall Company is receiving the first white lilac seen in the market this season, and expects to have a supply daily until Easter. A party composed of about thirty employees of the A. L. Randall Company gave a surprise party to Mr. and Mrs. A. L. Randall, at their residence, 1542 West Monroe street, last Saturday evening, in commemoration of the twentieth anniversary of their wedding. A handsome salad and berry set was presented to the happy couple, C. N. Thomas making the presentation in behalf of the employees of the company. Refreshments were in liberal evidence, and a jovial evening was spent, the company remaining until a late hour. E. F. Winterson is serving his country as a jurymen this week. E. C. Auding left on Monday for California, in search of a much needed rest. He expects to be away from Chicago six weeks. Bassett & Washburn are getting a daily cut from several benches of that beautiful scarlet carnation, O. P. Bassett, winner of the silver medal at the Toronto convention last year. The variety is to be seen at its best just now at the Hinsdale greenhouses of the firm. It was thought that the variety would be sent out this season, but the firm has decided to hold it until next season. It is hardly likely that it will be seen at the forthcoming carnation convention, but it will no doubt figure at the Fall shows. A quantity of the blooms

CHAS. W. MCKELLAR ORCHIDS FANCY VALLEY, ROSES, CARNATIONS and all CUT FLOWERS and GREENS 51 Wabash Ave., Chicago

A. L. RANDALL CO. Western Headquarters for Up-to-Date Florists' Supplies Write for Catalogue Nos. 19-21 RANDOLPH ST., CHICAGO

was shipped to Texe last Monday, the variety being well known at did out shipping points as a good hipper. Charles W. McKellar reports a good demand for orchids, more especially for his shipping trade. Cattleya Trianae, and phalaenopsis form the major part of his receipt. J. A. Bidding and J. P. T. Clapp are making a week's trip through Indiana and Ohio, visiting the different prominent growers. Vaughan & Sperry are receiving New York violets every day. Peter Reinberg is preparing to build from three to eight more greenhouses on his new place, known as "The Farm." The house will be each 300 feet long, and construction will be commenced as soon as the season allows. Sufficient glass for some of the new houses has already been purchased. E. H. Hunt is fitting up another floor in the building he occupies, to relieve the crowded condition of his other space. J. H. PEPPER.

St. Louis. News Notes. The Engelmann Botanical Club held its regular meeting Monday evening, January 13, which was largely attended. Professor M. Craig, who has charge of the herbarium at Shaw's Garden, gave a very interesting lecture. This being the first meeting in the year, the election of officers took place, resulting as follows: C. H. Thompson, president; H. S. Barber, secretary; Doctors Gladfelter and Green, vice-presidents, and John Kellog, treasurer. The club holds its meetings every second Monday in the month in the Central High School Building. C. C. Sanders paid a visit to Fred Ammann's place in Edwardsville, Ill., the past week, and reports that he never found it looking better. His visit was made in a big snowstorm. Superintendent H. C. Irish of Shaw's Garden has received an invitation from President Hoy of Springfield, Ill., to read a paper on a subject of his own selection before the meeting of the Illinois State Florists' Association, to be held in Springfield, February 18 and 19. He has accepted. C. De Weyer has left the employ of James W. Dunford at Clayton, Mo. Mr. De Weyer reports that he will build a place on his property on Olive street road this Spring to grow for the trade. Mrs. Bertha Burchel, head of the Riessen Floral Company, met with a very serious accident the past week by falling down stairs at her home, cutting a large gash in her forehead. She is at her post at the store, but with a badly disfigured face, business being such that she could not be spared. Ostertag Brothers furnished the decorations for the Lee wedding. This was one of the largest jobs this year, a large lot of wild smilax and cut stock being used. Julius Konig is now head man at the store on Washington and Jefferson avenues. Martin Moran, city buyer for Mrs. M. M. Ayers, is one of the early birds at the wholesale houses. He is always in the market for the best fancy stock obtainable. Henry Berning received large consignments of violets, roses and carnations the past week from his many growers. A fine lot of American Beauty was seen here. A good shipping trade is reported, also a satisfactory local demand. James W. Dunford has opened a branch in Johnston Brothers' drug store at the corner of Broadway and Franklin avenue. The best of his stock is being used at his West End store on Page Boulevard, known as the Gallager Flower Shop. Good trade is reported at both places. J. F. Wilcox of Council Bluffs, Ia., is consigning a fine lot of fancy long American Beauty to W. C. Smith & Company. This firm is also handling California violets. C. Young & Sons Company have issued their new catalogue, which is full of good things. They expect a big trade in plants and seeds this Spring. President James Young says that they are enjoying a good season's business in plants, bulbs, seeds and cut flower work. ST. PATRICK.

Trade Notes.
John Hartje is assisting Houston Tall, city florist, in waging war on San José scale, as per the City Park board's instructions. The board has decided to employ Mr. Kessler of Kansas City as supervising engineer and landscape architect for the city parks.
John Bertermann visited the E. G. Hill Company at Richmond this week.
La grippe victims are almost too numerous to permit of personal mention; almost all the craft has the malady, it seems.
Visitors: W. W. Coles, Kokomo, Ind.; J. S. Stuart and J. A. E. Haugh, Anderson, Ind.; Fred and Theodore Dörner, Lafayette, Ind.; Charles Knopf and E. G. Hill, Richmond, Ind.; C. B. Kuekman, New York.
Meyer Heller of Heller Brothers, New Castle, Ind., is reported in a serious condition; his many friends are anxious for his welfare.

The State Florists' Association held its annual meeting Wednesday, January 15, at the Commercial Club rooms. Officers for the ensuing year were elected as follows: President, J. S. Stuart, Anderson, Ind.; vice-president, Herman Jung, Indianapolis; second vice-president, Charles Knopf, Richmond, Ind.; secretary, A. F. J. Baur, treasurer, H. Wiegand. About twenty members were present. A most enjoyable evening was the result of a spread and smoker in the club dining rooms. Much important business was transacted. It was decided to put forth every effort to have the American Carnation Society in Indianapolis next year, and all delegates to Washington are instructed to insure a good time for the members in the Hoosier city in 1909.

John A. Evans says the ventilating business is booming and there is no cause for fear.
S. S. Skidelsky's friends in this city comment frequently on his able papers read before the Philadelphia Florists' Club. We all knew his accomplishments in this line, but hereafter Mr. Skidelsky should not be allowed in competition with his brother florists, as he is in a class all by himself. I. B.

FIRES.

POUGHKEEPSIE, N. Y.—A slight blaze in the greenhouse of John Gemmill, 165 North Hamilton street, did damage to the extent of \$300 on the morning of January 10, 1908.

GLEN COVE, N. Y.—The Nassau County Horticultural Society held its regular monthly meeting at Glen Cove on January 8. There was a large attendance of members. H. F. Meyers exhibited a fine vase of carnations. The annual dinner of the society will be held at the Oriental Hotel on January 29 at 4 p. m. G. M. K.

PITTSBURG.—Joseph Munschi, a landscape gardener, died at his home last week, aged 75 years. He was a native of Switzerland, and went to Pittsburg when a young man. He leaves two daughters and one son.

SPHAGNUM MOSS

\$1.50 per bbl. bale; in burlap \$2.00.

PEAT

\$1.00 per 1-bbl. bag.

THE BEST WAY

to collect an account is to place it with the **National Florists' Board of Trade**
56 Pine St., New York
WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

Newport, R. I.

Horticultural Society.

The regular fortnightly meeting of the Newport Horticultural Society was held Tuesday evening, January 14. President Allan in the chair. The ball committee reported that the returns were not yet complete, but enough so to make it sure that financially the ball had been a decided success. One new member was proposed.

Alexander MacLellan started a discussion on the importance of the matter of registering new plants by the S. A. F. O. H., and said that as he understood that the past and present method is to put the whole work on the secretary of that organization and make him responsible, it would seem that some different arrangement could be reached whereby everything registered, or desired to be registered, would be thoroughly investigated before the new name would receive the approval of the National Society. Mr. MacLellan thought that the secretary of the S. A. F. O. H., at the time of the registration of the hydrangea, so much in evidence lately, should not be held wholly to blame if a mistake had been made. The consensus of opinion seemed to be that in the matter of registering plants the S. A. F. O. H. can be of great service to horticulture and horticulturists if the work is done as it can be by that society. There was no inclination to dictate, but it was thought that the importance of the matter required an expression of opinion, which it was also thought would be welcome by the Society of American Florists. Mr. MacLellan was asked to read a paper at the next meeting, which he agreed to do. D. M.

MADISON, N. J.—The twelfth annual smoker of the Morris County Gardeners and Florists' Society was a gala affair, over 150 members and their guests being present. Great credit is due the entertainment committee—Messrs. Herrington, Schultz, Totty and Duckham—for the high-class talent they secured to amuse us, and the service of coffee, sandwiches, punch à la Totty, and cigars was timely and abundant. Everybody had a good time.

There was a short business meeting before the entertainment; two new members were elected.
Among our visitors were Harry Turner, Castle Gould, the Rickards Brothers, Wm. Sperling of Stoupp & Walter Company, and W. E. Marshall, New York. Several of the guests helped entertain. Al and Billy Rickards did their parts better than ever before. Mr. Marshall spoke for the New York Florists' Club and also sang for us; O. A. Miller, secretary New Jersey Floricultural Society, spoke for Orange, and extended an invitation to attend the Orange smoker, on February 7, which was duly accepted. E. R.

LOS ANGELES, CAL.—James W. Jeffries, florist, 80 years old, and for the last twenty-six years a resident of this city, died at his home, 151 West Sixteenth street, on January 10, 1908, after an illness of four weeks. He is survived by a widow and daughter.

I gift to you a Violet
In token that I'm glad we met.
I hope we may already yet
Once more again together get.
Dayton, O. MATHEWS.

THE CHRYSANTHEMUM

Arthur Herrington's New Book

The most complete and comprehensive work on the cultivation of the Chrysanthemum that has as yet been published to America. Handsomely illustrated, 168 pages, 5 x 7 inches. Price only 50 cents, postpaid.

A. T. De La Mare Ptg. & Pub. Co., Ltd.

Syracuse, N. Y.

Trade News.

Trade here is only normal. Large funeral orders have been quite frequent of late, which has tended to keep stock fairly well cleaned up. The demand for bulbous flowers seems to be falling off. Carnations and roses are preferred for private functions.

Mr. Marquisee tells me that, much to his regret, he will be unable to attend the convention of the American Carnation Society at Washington. His half-brother, Mr. Williams of Utica, N. Y., died last week, leaving a large estate; Mr. Marquisee is one of the executors, so has a great deal to look after just now.

We are having considerable dull weather still. Thinking it might interest other florists in other parts of the country to know what their brothers here have to contend with in that direction and the difficulty experienced in producing AI stock, the following figures have been kindly supplied me by the Superintendent of the Government Weather Bureau at Syracuse University:

	Clear Days	Partly Cloudy	Cloudy
Sept.	2	16	12
Oct.	9	6	16
Nov.	3	8	19
Dec.	1	8	22

It will be seen that in four months we have had only fifteen clear days. Now a man who can produce good stock under these conditions knows his business.

The East Side Improvement Association, of which Walter Meneilly and his sons are very active members, have started a new idea that could be followed with profit by many other florists. The plan is to offer six prizes, varying in value from ten to fifty dollars, to the residents of their ward who make the greatest improvements in their home surroundings this Summer. School children will be encouraged to compete.

H. Y.

Buffalo, N. Y.

News Notes.

Trade the past two weeks has been very good. Quite a number of large dinners and receptions were held, which created a demand for violets, orchids and lily of the valley for corsages. American Beauty roses had a good sale; they brought \$18 per dozen. Harrisii lilies are realizing \$3 per dozen and selling well.

There appears to be a local epidemic of grip; quite a number of the craft have been down with it. Edward Slattery and Edward Walther of Palmer's have just returned to work after an attack of this malady. Gertrude Sawyer of S. A. Anderson's has been suffering for several weeks with a severe attack of pneumonia. W. A. Adams of the same firm, who was elected supervisor at the last election, was seated on Tuesday, January 7.

The Buffalo Cut Flower Company reports business very active this month.

W. H. G.

Danbury, Conn.

Joseph E. Cornell, who recently started a cut flower store on White street, was married on January 1 to Miss Ora M. Bissard. Mr. Cornell has been in the business five years in Danbury.

The Deer Hill Conservatories, Mr. Judd, proprietor, are the largest growers in the city. A fine quality of carnations is produced, a house of recent construction being devoted entirely to the leading varieties. Considerable outdoor work was in progress in the way of grading and road-making.

J. M.

AMES, MASS.—Professor F. A.

Waugh, head of the landscape gardening department of the Massachusetts Agricultural College, has just received word from the United States Patent Office that a patent has been allowed on his "pocket plane-table." This is an instrument which the classes in landscape gardening have used for two or three years, and which will probably prove useful for a variety of landscape gardening and engineering work.

A. G. SMITH & SON, violet growers, Petersburg, Va., send us a handsome advertising card showing a pretty "matinee girl" in profile. "The best and only the best" is the firm's motto.

EDWARD MacMULKIN, 194 BOYLSTON ST., BOSTON, MASS.

SANTA BARBARA, CAL.—The Civic League, recently organized, with a general committee of 100 and an executive committee of fifteen, whose purpose is the management of fetes, receptions of a general nature and the general betterment of civic affairs for Santa Barbara and environs, has decided to make the inaugural event of that association a reception to the Atlantic fleet, augmented with a flower fete that will surpass anything of the kind ever attempted in the world. To this end the co-operation of local artists among the painters of landscape, marine and still life and adepts at landscape gardening has been enlisted. The movement has received cordial support from all classes in this city and contiguous points, and from the interest already manifested by the men of means in and about this city it can be safely vouchsafed that the reception to be given Rear Admiral Robley Evans and his men will go down in history as the greatest floral display that has ever been presented at any time.

LOS ANGELES, CAL.—At a largely attended meeting of seedsmen, florists and nurserymen on January 4, 1908, at 555 South Main street, plans were discussed and preliminary arrangements made for the great flower show to be held here early in April. Indications point to a highly successful exhibition, as a large number of lovers of plants and flowers will exhibit from their private collections, in addition to the display made by the professional florists. Pasadena will be a prominent factor at the show, as the Gardeners' Association has taken an active interest in the proposed exhibition and at its next meeting will be visited by a committee from Los Angeles.

SEATTLE, WASH.—The Seattle Florists' Society will arrange for a flower show next Fall. At a recent meeting held in the offices of the Seattle Floral Company, which was attended by a large number of florists and horticulturists, a committee was appointed to wait upon those likely to be interested and to arrange for financing the show.

CINCINNATI, O.—Herbert Green-smith is now with the J. M. McCullough Seed Company, in charge of the firm's plant department. Mr. Green-smith entered on his duties on January 4, 1908.

A. DIETSCH CO., 615 Sheffield Ave. Chicago, Ill.

New Haven, Conn.

E. J. Morse is about to open a handsome cut flower store next to Poll's Theater.

The violet and sweet pea crops of J. H. Slocomb are in fine shape. These are his specialties under glass in Winter. In Summer he has a couple of acres devoted to various plants for cut flowers that he sells at wholesale to the store men. In gladiolus Mr. Slocomb has many fine seedlings of his own production, some of which he values very highly. Besides these, all the popular varieties are extensively grown. He is quite an authority on hardy herbaceous plants, of which he has a fine collection.

John F. Doughty is making a specialty of high grade geraniums for Spring trade. He says there is as much money in growing geraniums as anything else when a man handles them rightly.

Thomas Pattison is cutting some good carnations and reports business brisk.

F. H. Horn is nicely fixed on Woodward avenue. He grows some good carnations and has a thrifty looking place. Besides being a florist Mr. Horn is quite a nautical man, and is the owner of several nice sailboats.

Smith T. Bradley grows a goodly lot of ornamental and flowering plants; he is the largest grower of this stock in the city, and his greenhouses always contain something of interest to his customers and visitors. J. M.

Waterbury, Conn.

Messrs. Saxe & Flota completed a new house for carnations this past Summer. The house is 150x40 feet. It has cement walks and benches, with iron sills, and top as well as side ventilation.

Alex. Dallas was confined to his rooms with a gripe during the time of your correspondent's visit. J. M.

NASHVILLE, TENN.—Ganey Brothers have purchased six additional acres of land, and have now 12 acres available for garden purposes.

For Greenhouses, Graperies, Hot Beds, Conservatories, and all other purposes. Get our figures before buying. Estimates freely given.

GLASS

N. COWEN'S SON,
 14 & 16 Wooster Street, New York

Heating.

Growers' Problems Solved by U. G. Scollay.

What is the heating capacity of a tubular boiler 4 feet diameter, 15 feet long, containing 11 tubes of 3 inches diameter? The grate to boiler is 5 feet long, 11 inches wide. The boiler was tested to 75 pounds pressure before being removed to install a larger one. How many square feet of glass will this boiler carry, using steam; also what amount of glass will it heat using it as a hot water boiler, and how should the boiler be tapped for water? The temperature desired is 60 degrees in zero weather, without tapping the fire.

Assuming that your boiler is a standard tubular one to be set in brick work we would say that it has a maximum capacity of about 1,200 square feet of radiating surface. The size of the grate that you mention will easily take care of this amount. The boiler will carry in a properly piped range of glass houses about 21,000 square feet of glass to a temperature of 60 degrees. You can use the boiler either for hot water or steam for the amount of glass mentioned, the only difference being that you will require more radiating surface for hot water than you do for steam. I approximate its capacity in hot water at about 7,500 square feet. These are maximum capacities and you must govern yourself in laying out a heating plant not to overload. If you will let me know the amount of glass you propose to heat I will then be in a position to tell you how the boiler should be tapped, both for water and steam. If further information is desired regarding this point send a rough sketch of your house.

VOL. XXV. NO. 5

NEW YORK AND CHICAGO, FEBRUARY 1, 1908

One Dollar Per Year

Winsor and White Enchantress

**Strong Rooted Cuttings
Now Ready for Delivery**

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere, and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. Order early, while we can promise immediate delivery, and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6.00 per 100, \$50.00 per 1,000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60.00 per 1,000.

Strong established pot-grown plants, \$9.00 per 100, \$75.00 per 1,000.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendell, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

PORTSMOUTH, VA. On January 20 J. W. S. Bull & Company, druggists and seedsmen, at 518 Middle street, made an assignment for the benefit of their creditors. Charles M. Meginsky, apothecary in the Middle street store, and T. J. Barlow were named as trustees.

NEW YORK, M. H. Duryea of Henry Nungesser & Company, vice president of the American Seed Trade Association, returned Thursday of last week from Chicago, whether he went to attend the meeting of the executive committee of that organization. En route Mr. Duryea stopped off at Toledo, O., to get a line on the clover seed conditions. He says that this seed is very high in price, especially the finer qualities.

Andrew De Voe, seed merchant, died on January 26 in his home, 1919 Bryant avenue, Bronx. He was a son of the late Stuart De Voe, who founded the business by starting a seed farm in West Farms in 1838.

WANTS HOME DAHLIA PRODUCTION EXECUTIVE. Secretary Maurice Fuld of the New England Dahlia Society, in the Dahlia News for January, 1908, makes the appeal that "true Americans always patronize American firms when such is possible." He adds: "It is nothing unusual to-day to see 5000 or more varieties of dahlias catalogued by a single firm, and the varieties offered here are such as have proven worthy in America. It would be well to consider that many European novelties, heralded with much praise and glory from abroad, have resulted in dismal failures when grown here, as they were unsuitable for our climate."

AMERICAN SEED TRADE ASSOCIATION.—As mentioned in last week's issue, the executive committee met at the Auditorium Annex, Chicago, January 21. Detroit has been selected as the meeting place for the next convention, on June 23-25. The headquarters have not yet been selected. The following resolution was adopted:

"The executive committee of the American Seed Trade Association recommends that its members still further emphasize and publish its disclaimer by having it printed on all stationery, including letterheads, billheads, quotation sheets, acceptances, labels and packages, and to disseminate same to all merchant customers possible, and to supply merchants with disclaimer cards to be hung in a conspicuous place in the salesroom."

Cards will be furnished by the secretary to members free on request and to others at 10c. per copy, postpaid.

C. E. KENDALL, Secretary.

IMPORTS OF SEEDS, ETC., January 25 and 26. Peter Henderson & Co., 120 bushels grass seed; Davies, Turner & Company, two packages seed; Peter Henderson & Co., two bags seed; Stimpff & Walter Company, one case flower seed, J. M. Thorburn & Co., 10 bags alfalfa seed, Vaughan's Seed Store, three bags seed; E. B. Vandegriff & Co., 60 packages seed, etc.; The Albert Dickinson Co., 180 bushels clover seed; Peter Henderson & Co., 101 packages seed; Thus, Pollock & Co., three packages seed; Vaughan's Seed Store, two packages seed; E. B. Vandegriff & Co., 101 packages seed, etc.; G. W. Sheldon & Co., 107 packages plants, etc.; E. B. Vandegriff & Co., three cases plants.

Seed Trade Notes.

The long wished-for snowfall has at last materialized and I am sure that all of us feel much the better for it, as certainly there can be no question but that reasonable weather is a most wonderful help, "in the long run," to every branch of trade, and especially to the horticultural business in all its multitudinous ramifications. It has been the unseasonable weather conditions of the past year or more that have so seriously and I may say, detrimentally financially, disturbed the seed business; but let us hope that from now on we are to have normal conditions again.

I am very much pleased to learn from many of our very large seed firms that trade orders of large size, and in more than usual numbers for this early season, are coming in in daily increasing volume from every section of the country. My information in this regard does not come from any particular section, but from all parts of the United States; I have therefore, I feel, justified the forecast I made you last week and previously, "that a very large, perhaps the best business in a wholesale way done in many seasons, will be accomplished before the end of February." Then March and April will take care of themselves; they always have, and will in 1908. As regards the retail mail trade it as yet has not been as good as very early indications seemed to forecast; but I think that January will, nevertheless, show a volume of business somewhat above the average in this direction. One factor against an extremely large mail seed trade (retail) in January this year has been the unfortunate tardiness in issue and distribution of one or two seed catalogues of our largest and most important mail-order houses; for it stands to reason that when all the mail-order catalogues are out and in customers' hands together, so to speak, the combined influence of them all exerts an advertising power that results in bringing to each and every firm a very much increased volume of business.

Taking the horticultural situation as a whole, I do not remember a year where the indications in January were more propitious for a very satisfactory seed-selling season than they now are.

It would indeed seem as if, in these days of advancement in all lines of our business, we should all be careful regarding the use of electrotypes and zinc etches in our catalogues, and be absolutely sure that such, when used, truthfully and accurately represent the subjects as per the titles affixed to them. It is by no means uncommon to find the same illustration representing as many different flowers or vegetables, as the case may be, as it happens to be used in various catalogues. Such injurious blunders come about in many ways. Sometimes the maker and dealer in the illustrations names them incorrectly when they are first offered for sale—and the original misname is perpetuated.

Bad as such illustrating is, "worse remains behind"; that is, known instances where one catalogue man uses an illustration of a novelty to illustrate some variety of his own—such a practice cannot be too strongly condemned; it lowers materially the conservative and moral tone of the seed business, and I for one would like to see all such very reprehensible actions once and forever stopped.

Appropos of catalogue illustrations I could not but be most favorably impressed and perfectly delighted with the splendid appearance made by two or three seed catalogues of prominent firms that have entirely discarded the use of the wooden and zinc etch. When I received these catalogues, the past week, and most carefully examined them, I realized more acutely than ever before the absolute conviction of truthness of type that a photographic reproduction of plant, flower, or vegetable, must carry to a customer. Good explanatory text is, of course, most essential to the sale of seeds or plants, either in one's catalogue or newspaper advertisements, but when you combine with a good readable description of what you may have to offer, a fine half-tone illustration, made from a "true to life" photograph, you produce a combination that, as a trade bringer, is irresistible. Such a catalogue work costs considerably more than the older method, but the splendid results in the way of increased orders fully warrant the additional expense. In these days of progress we cannot hope to keep our business at the highest

notch of success without good printing; and this means, among other things, a fine catalogue. I cannot take any more space this week, but if I have been able to start you seriously thinking about the make-up and appearance (that shall bring you an increasing number of orders) of your future catalogues, I may have done you some little good. I trust I have. V.

European Notes.

The inadvisability of binding one's self to one particular transportation company has never been more thoroughly exemplified than during the present disastrous and extraordinary season. The cutthroat rates that are quoted in keen competition are all based upon the complete accord of everything that can possibly happen. Dame Nature is left out of the question. But the old lady has an unhappy knack of asserting her authority and then "The best laid scheme, etc."

The present week has afforded a painfully practical illustration of the difficulty outlined above. One of the most important transportation companies uses only one line of steamers although there are other good lines from and to the same port. A breakdown occurs and the innocent shipper dispatches his goods to the docks in obedience to the transportation company's instructions only to find that they are not shipped but must be there for two or three weeks until another steamer of the usual line is ready. The result is that the helpless shipper, who has been worked off his head to get the goods ready is promptly saddled with all the blame for the delay. Fortunately all our regular orders are now practically completed and we may reasonably hope for a brief respite to enable us to pull ourselves together.

Taken as a whole the present season has been the most anxious, difficult and discouraging we have ever known. The frost and snow have left us and we are enjoying (2) a Mid-summer temperature according to the 1907 standard. Should the present conditions continue we shall soon be able to ascertain to what extent our plants for 1908 crops have suffered from the 24 degrees of frost we have experienced.

Mons. Philippe de Vilmorin was admitted a Fellow of the Linnean Society on January 16 and a very important paper on "Notes on Brassica Crosses" was read by Arthur W. Sutton, V. M. II., at the same meeting. Mons. Vilmorin is to be a guest at the annual dinner of the Societe Francaise d'Horticulture de Londres.

EUROPEAN SEEDS.

CANADIAN CROP REPORT.—The following notes on the crops in Canada mentioned are extracted from Bulletin 96 of Ontario Department of Agriculture:

Peas: This crop is said to have been the best for years, there being an almost complete absence of the weevil which has done so much injury to the crop for several seasons. The straw has also turned out well as to length and quality. Pea-growing in Ontario, according to correspondents, is likely to increase in acreage next year.

Corn: Notwithstanding the lateness of the Spring, early planted corn came through in generally fair condition. Some of the crop was put in rather late, however, owing to replanting, but only a small percentage was caught with frost in the Fall. A few complaints were made of soft corn, but in most instances the crop was regarded as being of good quality, the stalks being shorter than usual, but well cobbled. The yield per acre is not up to the average, but the acreage was larger than in the years immediately preceding. The fact that grasshoppers attacked the corn this year is regarded by some correspondents as something uncommon.

Beans: Beans were slightly touched by frost in July and September, and suffered a little from wet weather at harvesting. They were fairly potted, and on the whole were of good quality, considering the lateness of harvesting.

Clover Seed: Clover fields kept for seed were rather thin, owing to the very trying Winter, the late Spring, and Mid-summer drought. The heads were well filled, however, and some fair yields of

seed are spoken of by a few, although in most cases the return will be light. The midge was evident in several localities, but no serious injury from it was reported. Many clover fields were closely pastured by cattle, owing to the scarcity of hay and feed.

Lucerne: This crop is increasing in favor. Many farmers are experimenting with small patches of it, and the general opinion is favorable, as it stands the drought pretty well, and several cuttings are available during the season.

A bill has been introduced in the Kentucky Legislature seeking to make blue grass the State's "floral emblem." A writer in a Kentucky paper rhapsodizes thus over the matter:

By all means make blue grass the State's floral emblem. Nothing more appropriate can be suggested. It is characteristic of the soil and the people that live thereon, of their hospitality, friendship and love of the beautiful.

"Beautiful blue grass, nourishing the horses and cattle, its verdant hues furnish the setting of that picture of home in which the memory of mother's love, of childhood and love's first sweet dream mingle with each other like the flowers of the old fashioned garden."

Westcott.

NEW PAEONY-FLOWERED DAHLIAS

This new type of Dahlias originated in Holland, and promises to become very popular. The artistic flowers are very large, from 6 to 8 inches across, and are best compared to the semi-double Paeonies in general form. They all flower very freely, and are borne on long, strong stems, making excellent material for cutting, as well as for garden decoration. *Germania, Brilliant straw-colored, a very fluffy, artistic flower, standing well above the foliage, producing a very gay effect. 25 cts. each; \$2.50 per doz. *Glory of Barn, Very large, loosely arranged flower of soft hortensta-rose color. 25 cts. each; \$3.50 per doz. *Queen Emma, A magnificent sort that appears almost artificial; it is of a charming shade of mallow or Hollyhock pink, the inner petals banded with gold 25 cts. each; \$2.50 per doz. *Queen Wilhelmina, Immense, fluffy flower of pure white with yellow centre. 25 cts. each; \$3.50 per doz.

TWELVE CHOICE DOUBLE POMPON DAHLIAS

The set of 12 varieties for \$100. *Albion Imperial, Creamy white, tipped aniline red. *Darkness, Deep velvety maroon. *Elegant, Soft pink tipped deep pink; reflex light pink. *Gold Haneben, Pure primrose yellow. *Kleine Domitza, Orange buff; always in flower. *Little Bessie, Creamy white, quilled petals. *Little Herman, Deep crimson, shaded garnet, tipped white. *Little Nafad, White, tipped amaranth red. *Little Prince, Deep currant red, tipped white. *Lon Kramer, Amber, heavily tipped crimson. *Red Piper, Beautiful deep red of fine form. *Snowdahl, Unquestionably the finest white. 10 cts. each; \$1.00 per dozen; \$8.00 per 100. The set of 12 varieties for \$100.

NEW CENTURY SINGLE DAHLIAS

These magnificent single varieties all originated from the celebrated Twentieth Century offered in this set. They are all of free branching habit, flowering early, profusely and continuously throughout the season, flowers from 4 to 6 inches across on stems 2 feet long, and when cut keep in good condition for many days. *Crimson Century, Rich, deep, velvety crimson, shaded maroon, with rose halo around a yellow disc. 15 cts. each; \$1.25 per doz.; \$10.00 per 100. *Maroon Century, Rich velvety maroon with yellow disc. 25 cts. each; \$2.50 per doz.; \$20.00 per 100. *Pink Century, Delicate soft pink, flower very large. 20 cts. each; \$2.00 per doz.; \$15.00 per 100. *Scarlet Century, Brilliant scarlet with golden disc. 25 cts. each; \$2.50 per doz.; \$20.00 per 100. *Lavender Century, Delicate lilac with light shadings, very pretty. 15 cts. each; \$1.50 per doz.; \$10.00 per 100. *Twentieth Century, Early in the season, intense rosy crimson, shading gradually to the soft white on the edges and a light halo around the disc. As the season advances the flowers become center changing to almost pure white suffused with a soft pink, not variegated but blended in the most beautiful manner. 15 cts. each; \$1.50 per doz.; \$10.00 per 100. One each of the 6 varieties for \$10.

STANDARD SINGLE DAHLIAS

*Alba Superba, Fine large white with a dash of canary yellow at base of petals. 15 cts. each; \$1.50 per doz.; \$10.00 per 100. *Advancement, Fine deep red suffused with rose halo and yellow centre. *Ami Barriol, Rich pure garnet with fine dark foliage. *Blackbird, Black velvety maroon with a bright red spot at the base of each petal. *Fashion, Crimson maroon with other shadings. *Guillardia, Golden yellow with a broad red band at the golden disc. 15 cts. each; \$1.50 per doz.; \$10.00 per 100. *Gracie, White, delicately suffused with blue and a primrose halo at the disc. *Mrs. Bowman, Softening a large showy flower. *Polly Eccles, Pure apricot with yellow shadings, a halo of poppy red surrounding the Indian yellow disc. *St. George, A pretty primrose yellow of large size. 15 cts. each; \$1.50 per doz.; \$10.00 per 100. *Striking, Deep garnet, each petal with a white spot on the tip. *Wildfire, Brilliant purple scarlet, of large size. Price: Except where noted, 15 cts. each; \$1.50 per doz.; \$10.00 per 100. One each of the 12 varieties for \$125. We will furnish one each of the 111 varieties listed, an interesting collection for \$15.00.

DECORATIVE DAHLIAS

Table listing various Decorative Dahlias with descriptions and prices. Includes varieties like *Admiral Dewey, *Black Beauty, *Bronze Beauty, *Catherine Duer, *Clifford W. Branton, *Fire-rain, *Giganten, *Henry Patrick, *Lyndhurst, *Lynclot, *Marchioness of Butte, *Mrs. Roosevelt, *Oban, *Souvenir de Gustave Dozon, *Sylvia, *Wm. Agnew, *Zulu.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
 J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

COLUMBUS, O.—Nurserymen of Ohio effected a State organization at Columbus last week, with the following officers: President, J. W. McNary, Dayton; vice-president, Robert George, Painesville; secretary, W. B. Cole, Painesville; treasurer, W. H. Scarff, New Carlisle; executive committee: Robert George, Painesville; Fred D. Green, Perry; G. S. Pickett, Clyde; John Siebenhaler, Dayton, and E. G. Cox, Proctorville.

ROCHESTER, N. Y.—The National Association of Retail Nurserymen held its annual banquet on January 21 at Powers Hotel. Edward B. Lynn was the toastmaster. Toasts were responded to as follows: William C. Barry, "The Flower City"; L. B. Elliot, "Grafting"; John J. McInerney, "The Ladies."

of the golden, a rounded, close, half globe shape, but without any golden color at all, and still others will have reverted to the common type—tall, slim, with the tufts of foliage arranged in a flattened, vertical way along the stems. These varieties are nearly all well worth having, and it is really worth while to sow seeds of the golden variety, *T. orientalis aurea*, for the sake of getting them. The characters show when the seedlings are a foot or so in height, and then when the next transplanting is given them they can be sorted out, the different kinds by themselves. Seeds should be sown in early Spring, indoors or even in the open ground if in a situation where the soil is of a friable nature, such as will not cake in heavy rains.

Hardiness of Paulownia.

Many persons consider the paulownia as not being hardy, because of misconception of its nature. To be sure, it is not hardy in the colder parts of the West, but even where not hardy it is but killed to the ground in Winter, sprouting afresh from the base, just as the fig does here in Philadelphia. The paulownia even here gets killed back the first year or two of its seedling life, and it is this that causes some to think it not hardy. It is its succulent, unripened wood at that period that makes it liable to be caught by frost. After the second year, there being then hardened wood, there is no more injury, nor are the youngest shoots ever hurt afterward.

It is because of this freezing back when in its infancy that so many crooked trees of it are seen. This can be remedied by cutting down to the ground any injured seedling so that when growth starts it will be represented by one straight shoot. Crooked, low-branching

leaved beech is rather hardy, and by having but few branches, naturally become rounder from the prunings given it.

Of the two species of beech, the American and the English, we are indebted to the English for the several varieties we have—the blood leaved, the tricolor, the weeping forms and the cut leaved ones. All of these sorts are increased by grafting them on the common stocks. They are usually worked on the English, the one they spring from, though they will take fairly well on the American.

Besides grafting, inarching may be practiced, a number of the common ones being set around the varieties, or vice versa. These varieties are so popular, especially the blood leaved, that such a thing as an overstock of it is almost unknown in nurseries.

Hardiness of the Pecan Nut.

Nuts of the pecan can hardly be looked for from trees grown north of New York City, the tree not being over hardy, but to have the pecan in one's collection gives pleasure to many. Trees have borne well even in Philadelphia, while in Washington, D. C., there is a nice tree in the Agricultural Grounds, full of nuts when the writer saw it a few years ago. The pecan is wild up to Virginia, and could nuts from it be had from those trees the seedlings would prove hardier than those from the Gulf States. The nuts of pecans do better sown in Spring than in the Fall. Secure them in Autumn as soon as they can be had, and keep them in damp sand all Winter, sowing them early in Spring; and a good crop may be looked for. But don't look for the

The Sweet and the Sour Gums.

Of the two gums, the sweet and the sour, *Liquidambar styraciflua* and *Nyssa multiflora* respectively, the general public usually asks for the sour gum when desiring a tree to give ornamental colored foliage in Autumn. This kind of foliage the sour gum certainly gives; it becomes of a crimson color early in Autumn, remains so a day or two, then falls to the ground. It is beautiful, but far too transitory. It barely gives one time to see it in its scarlet garb before all has disappeared.

The sweet gum is far superior. Its foliage does not take on the scarlet of the sour gum; it is more of the color of the sugar maple—a mingling of orange and scarlet and green. And like the sugar maple the change is gradual, giving one the pleasure of seeing it from day to day, enjoying its varying colors as the time passes.

Many nurserymen find the opinion spreading that the sour gum has been very much over-rated as regards its Autumn color. Its beauty is more in the beautiful green of its Summer foliage and its pyramidal habit of growth when it stands alone on a lawn.

Both of these gums require hard pruning when transplanted, especially the sour gum. It needs to be cut back to the main shoot, or near it, as it makes but few fibrous roots.

Varieties of Chinese Arbor Vitae.

Those who raise Chinese Arbor vitae, *Thuja orientalis*, from imported seeds, or from those obtained from Southern seedsmen, often find many varieties among the seedlings. This is caused by the seeds being saved from the Golden Chinese variety as well as from the type. The seedlings from the Golden Arbor vitae vary greatly. A few may be good representatives of the common form of the golden one; others will have the character of growth

specimens are all very well for shrubs or low-growing trees. The paulownia is a large tree, and it looks best when grown as such, its branches springing out at 5 to 6 feet from the ground.

The paulownia is sometimes used in beds where something tropical looking is required. It is not allowed to grow tall, but every Spring it is cut down to the ground, which causes a shoot to spring up bearing leaves often 18 to 24 inches across. For such positions it is very useful.

This is the season to prepare for the sowing of the seeds in early Spring. The seeds are small, and exceedingly light. There are thousands of them in an ounce. It takes a good many years from the seedling stage to that of the flowering, and where it is desired to enjoy the fragrant blossoms of this tree it will be better to get a fair sized specimen to start with instead of waiting for the seedlings. It can also be increased from root cuttings.

Cut-Leaved Beeches.

The failure to have success in the transplanting of cut-leaved beeches, especially those of the fern-leaved variety, is largely due to the failure to prune them severely at the time of removal. All beeches are in the class of those difficult to transplant, but this difficulty is not experienced when the trees are pruned hard. For the reason that the fern-leaved variety makes a dense, twiggy growth and but few roots, it requires very close pruning, and it would be to the interest of every seller to urge the customer to prune it or to allow the seller to do so.

With this variety the branches should be cut down to almost the center one, the harder the better and the greater the chance of the tree living; and in all the Northern States where hard freezing occurs, Spring will be found a much better time to plant than Fall.

What has been said of the fern-leaved beech applies as well to all beeches. One and all want heavy pruning. Besides the aid afforded to them in this way the blood-

seedlings soon after sowing. It will be late Spring before they are above ground, and by Fall they will be but two to four inches high, but their roots will be perhaps six inches in length. Seedlings require transplanting often, otherwise when they reach a transplanting height, say 4 to 5 feet, it is hard to succeed with them. There is but a single tap root. It is better to transplant them when two years old, cutting off the end of the tap root at the time. Writers claim that if this and all tap rooting trees are grown in sandy or stony ground when young they become somewhat fibrous rooted, and this seems reasonable to expect.

Some of the Southern nurserymen have made efforts to secure a pecan of high grade for its nuts, large and thin shelled. There is a great field for improvement as it is, for some of the nuts as bought from commission houses have much thinner shells than others; so thin, in fact, that they can be broken by pressure between the thumb and finger.

The wood of the pecan is excellent for fuel, but it is not the equal of the pig nut and some of the other hickories for mechanical uses, and then hickories take so many years to reach a good size that foresters so far have not provided for the planting of many kinds, although some are being set out.

JOSEPH MEEHAN.

Floral Park, N. Y.

We are much gratified to learn that Mr. I. S. Hendrickson, manager of the wholesale department of John Lewis Childs, here located, has almost entirely recovered from an operation for appendicitis, through which he recently passed, and that it is only a question of a few days when the wound will be healed and a short time thereafter when that gentleman will be in a position to resume his duties.

ROSES

My Maryland.

Some time in December I had the pleasure to visit my old friend, John Cook, near Baltimore, whose success in producing new roses is so well known to the trade. I had seen his new rose, My Maryland, at the Horticultural Society's meeting in Baltimore, and was glad to have an opportunity to see it growing.

At the time of my visit he had not fixed upon a name for it, but was considering whether to let some other grower have the entire stock and the privilege of naming the rose. But I am glad to know that he holds it and has given it so appropriate a name, for Maryland, so many years his adopted home, deserves this recognition.

The rose is all that Mr. Cook claims for it. Its peculiar shade of pink, flushed with salmon, and its long pointed buds make it a very attractive flower. The very healthy growth of the plants and the invariable habit of every shoot making a bud will render it a profitable rose to grow. The color is one that holds its own to the last, never changing its tint as some of the dark red roses do.

It was just before Christmas when I was at Mr. Cook's place, and among other things that pleased me was a nice lot of pyramidal hollies in tubs, covered with berries. These English hollies should make very popular Christmas plants for church decoration.

It had been many years since I had been in this attractive place, for I was in the Baltimore trade myself when Mr. Cook, after years in a private place in the same neighborhood, started his establishment, which has now developed into one of the leading places about Baltimore and has become noted as the birthplace of so many fine roses. I was glad to see that in his old age Mr. Cook still maintains his love for the rose and is still growing seedlings. He was one of the first to build hillside greenhouses and he has continued to build and use them in terraces, one above the other, with roofs in terraces, too, converting the steep hillside into a great greenhouse. My first remembrance of the place was when it was the home of the Marie Louise violets when first brought to this country, and Mr. Cook's first reputation was in the distribution of this well-known violet, the first to supplant the pale Neopolitan, which the ultra fashionables still call Parma violets.

But the city is growing out toward Mr. Cook, and like so many of the older members of the trade who have stuck to an original purchase, his land is increasing in value and is now worth four times what he paid for it; and it will not be many years before, instead of being as now worth \$1,000 per acre, it will be valued by the front foot, and some day the home of the roses will be building lots. W. F. MASSEY, Salisbury, Md.

Grafted Roses

\$12.00 per 100; \$100 per 1000.

If you can furnish the scions, we can quote you lower prices in any quantity you wish.

CHRYSANTHEMUMS

For Every Purpose. A card will bring our Illustrated 1908 Catalogue.

ELMER D. SMITH & CO., Adrian, Mich.

Successors to Nathan Smith & Son.

Carnation growers who have a surplus of young plants should advertise them in THE FLORISTS EXCHANGE.

When Writing Please Mention THE FLORISTS' EXCHANGE.

Sweet Pea Annual for 1908.

This valuable and elegantly got up organ of the National Sweet Pea Society is published and may rightly be pronounced a worthy successor to the preceding issues, and a marvelously cheap shilling's worth.

In addition to the audit of the 1907 show, a most valuable document prepared by the secretary, the reports of the various trials and outings, the work of the Floral Committee and other important official information, there appears a catalogue of all the sweet pea names brought down to date.

Although this has in the main been compiled by Miss Jessie Cuthbertson, the charming and amiable daughter of our worthy president, the list was submitted to all the authorities at home and abroad before publication. At the same time there may be a few errors, and readers will confer a favor by notifying the honorary secretary of the same. The list will be issued separately and will be very useful for those who have to find names for new varieties.

A number of articles more or less interesting, by sweet pea experts, and others, and some poetry which resembles the Countess type of sweet pea in that the character is not fixed, completes the book.

Some characteristic "Impressions" from Mr. Burpee, enriched with his latest portrait, are very suggestive reading. Some of the papers, notably that of the worthy chairman of the floral committee, are rather pessimistic in tone, and a little too severe on seed growers.

Those who, like myself, have been connected with the business for "close on half a century" were agreeably surprised at the excellence of the stocks in the Reading trials, bearing in mind that some of the exhibitors have only started seed growing during the past five years. A very important suggestion of the new president is that there should be a dollar membership for Americans and Canadians which would enable sweet pea enthusiasts on your side to keep in touch with us over here and entitle them to receive the society's publications. I most heartily support this proposal and hope that the general editor of 'The Florists' Exchange will kindly give us all the help he possibly can.

The portraits which adorn (?) the book are more or less counterfeit presentments of the originals, but to those accustomed, as the writer is, to a sunny smile on the face of W. A. B., the photo is hardly to our liking, and seems to have been taken at the moment when a cabled order for 4,000 packets of Primrose Spencer was received that could not be accepted. The entire work is copyrighted and can be obtained from the honorary secretary for 25 cents plus 8 cents postage.

S. B. DICKS, F. R. H. S.

Winsor Carnations

From 6000 plants we have plenty of exceptionally fine stock, and 50,000 ready for shipment now.

From 2 1/2 in. pots \$7.00 per 100; \$60.00 per 1000. Rooted Cuttings \$6.00 per 100, 50.00 per 1000.

NEW (MY MARYLAND) ROSE

Best up-to-date commercial rose. Read what others have to say about it:

Among the many new roses of the year, there is none which has impressed me more favorably than 'My Maryland'... In color it may be described as a soft salmon pink, which brightens up to brilliant red as the buds open.

A. N. PIERSON, Cromwell, Conn.

In reply to your inquiry, what we think of your new rose 'My Maryland', we would say that after seeing other new roses we still believe that you have the best new rose of modern times.

GILDE BROTHERS, Washington, D. C.

Price 2 and 2 1/2 in. pots, \$25.00 per 100; \$200.00 per 1000; 3 in. pots, \$5.00 per dozen.

JOHN COOK, 318 N. Charles Street, BALTIMORE, MD.

THE WONDERS OF 1907 Imperial and Pink Imperial Carnations

The color of "Imperial" is a variegation of delicate pink similar to the shade in "Enchantress," with darker shades of pink.

The color of "Pink Imperial" is a most pleasing shade of pink, one that has long been wanted in the cut flower market.

The stems of both these varieties run from three to four feet in length, are extra strong and have no equal in the carnation of to-day.

The calyxes are good and strong and are practically non-bursters.

The flowers are well formed, run from three to four inches in diameter and are very fragrant. They are early, free and continuous bloomers, from October until late in July. Strong growers, every shoot a flower. Have shown them both at the November shows with thirty inches of stem. Vases of blooms shown at this Fall's show at Philadelphia, were pronounced the finest ever shown there. Both took first prizes at Washington.

"John E. Haines," the leading scarlet, has proved to be all that was claimed for it.

Color, most brilliant scarlet. Stem, from two to three feet in length, strong.

Calyx, good and strong non-bursters.

Flower, three to three and one-half inches in diameter.

Productiveness, unsurpassed, blooms 12 months of the year. No extra grass. Every shoot a flower.

Prices, for selected cuttings of each variety, \$6.00 per 100, \$50.00 per 1000. Place your orders early. Visitors always welcome

J. E. HAINES, Bethlehem, Pa.

CARNATIONS

Table with 3 columns: Variety, Price per 100, Price per 1000. Includes White Enchantress R. C., Enchantress, Lawson, Lord, Queen, The Belle.

Get your R. C. early and have blooms when others have none.

J. C. SCHMIDT, BRISTOL, PA.

(19) **To Clean Glass.**—I would like to know the best way to remove lime mixed with gasoline from glass.

New Jersey. A. C.
—Scrubbing the glass when it is perfectly dry with a good hand brush is the best method we know of.

(20) **Origin of Scale.**—Kindly inform me whether San José scale and the scale on palms originate from soil or water.

New York. J. H. H.
—The scale diseases are perpetuated by the depositing of eggs, and do not proceed from either soil or water.

(21) **Wants Scotch Thistle.**—Can you inform me where I could get some Scotch thistle? I would like to get some to make a bed next Spring.

Mass. S. O.
—We know of no grower who is specializing in thistles, and would advise our friend to get some seed, start it at once in heat and grow along until time to plant out. We believe Webber & Don, seedmen, Chambers street, New York, can supply the seed.

(22) **Woodlice on Mushrooms.**—Can you give me a remedy that would exterminate or prevent woodlice from eating and ruining my mushrooms?

Nebraska. T. U.
—A very effective way to get rid of woodlice is to trap them. Take potatoes, cut them in half, scoop out part of the inside, and lay the pieces along the edges of the beds. After dark take a light and you will find the woodlice feeding on the potatoes. Have a pail of hot water handy, and empty the woodlice into the water. Keep this up every night until the pests are cleared out.

(23) **Carnations After Onions.**—I have a piece of land on which onions have been planted for six years, which is very heavily manured; the land is in good condition—not too light nor too heavy—and I would like to grow carnation plants on it this Summer. Kindly give me your opinion.

Conn. J. G.
—The land on which onions have been grown for six years and which is now heavily manured should be all right for carnations if worked properly. We would advise ploughing as early as possible, and, before time to plant the carnations, giving a dressing of lime and plough again. This would tend to destroy any maggots that might have been left in the soil.

(24) **Spiraea Gladstone, etc.**—Kindly inform me how many weeks it takes for Spiraea Gladstone to come into bloom for Easter, also tulips, hyacinths and Von Sion narcissus after being in the greenhouse. All are in good rooted condition.

Conn. J. G.
—Spiraea Gladstone should have about nine weeks in the greenhouse, provided, of course, that it has been potted up two or three weeks and resting in a shed or under the benches. Tulips and hyacinths will be all right if allowed three weeks on the benches. For Von Sion narcissus we would allow four weeks.

(25) **Sea Moss.**—To settle a dispute, will you answer the following question in your next issue? What is the correct name and where do they get the Japanese air fern (sea moss)?

New York. F. A. M.
—We presume that the Japanese air fern referred to is the one used in the manufacture of fern balls. If so, the correct name of the fern is Davallia. Two varieties are used—D. bullata and D. Mariesii; both grow wild in Japan.

Sea moss, the botanical name of which is Ulva latissima, belongs to the order Ulvaceae, green spored algae, characterized by their green or rarely purple membranous frond, which never throw out rootlets at the base. It is widely distributed, but is imported chiefly from Japan.

(26) **To Strengthen Carnation Stems.**—Please tell me what I can do to strengthen the stems of my carnations. The plants look fine, the blooms are nice and there are many buds, but the stems

are weak, not holding the blooms up stiff. When the flowers open the stems bend. Also I would like to know what you consider a good rule as to watering the plants.

New York. A. D.
—We would either water with liquid manure once a week, or give a light top dressing with pulverized sheep manure or well-decayed stable manure.

There is no rule to water by, except to study the needs of your plants. Water them when they require it and as often as they need it. At this season of the year the plants should be kept rather on the dry side, so let the soil get fairly well dry each time before watering; then give enough water to go clear to the bottom of the bench, and wait until the soil is dry again. This might be two days, or it might be a week; but wait, however long it is. The rule of watering plants so often, whether they need it or not, will eventually ruin them.

(27) **Salvias and Peppers.**—Kindly tell me how to grow salvia nicely; the leaves of mine always curl. Also how best to grow pepper plants in flats.

New Jersey. E. K.
—Salvia if grown from cuttings should be treated about the same as arcolems or geraniums, and no trouble with drying of the foliage will occur if reasonable precautions are taken. Do not let the plants wilt for want of water, and keep the atmosphere of the house moist during the day.

—If the pepper referred to is the one grown for culinary purposes, sow seed in March, and, as soon as the young plants are large enough, transplant them into flats.

(28) **The Kinney Pump.**—About two years ago I received a circular about the Kinney pump, but have lost the address. Possibly you could give me same. Do you know of any florist using this pump, and is it giving satisfaction? I wish to use it to force liquid manure through the lawn.

New Jersey. G. M.
—We do not know of any florists who are using the Kinney pump. Write to the manufacturers; their address is The Hose Connection Company, Kingston, R. I.

CATALOGUES RECEIVED.
GILES COUNTY NURSERY COMPANY, Pulaski, Tenn.—rice List of Fruit Trees.

D. M. ANDREWS, Boulder, Col.—Price List of Seeds of Rare Flowers from the Rocky Mountains of Colorado.

J. F. NOLL & COMPANY, Newark, N. J.—Catalogue of Seeds, Bulbs, Plants, Poultry Supplies, etc., with a carefully selected List of Novelties and Specialties. The catalogue is well printed and illustrated. Noll's new Lettuce "Champion of All," and the "Mammoth Rajah Indo Raspberry," in color, have been selected as the cover designs.

DINGEE & CONARD COMPANY, West Grove, Pa.—New Guide to Rose Culture; being a Catalogue of Roses and Other Plants, Seeds, Bulbs, etc. As is well known, Roses form the great specialty of this long-established concern, and some idea of the extent of this branch of its business may be gleaned from the statement that over one thousand different varieties of roses are carried in stock; the enumerations occupying some 70 pages of the present catalogue. Charles Dingee established the business 58 years ago, and "at 84 years of age he is an inspiration, keeping us steadfast in maintaining the clean, honorable business methods of the old school." The catalogue is profusely illustrated. The front cover design, in color, shows a flower of the new hybrid tea rose J. B. Clark; the "new wonder rose," "Taus-mischon," also in color, having been selected for the design of the back cover. There is also a handsome colored insert of "The Famous Cochet Roses." An attractive and interesting catalogue.

CALENDARS RECEIVED.
From Valentine Burgevin's Sons, Kingston, N. Y.

CHANGES IN BUSINESS.
NEW HAVEN, CONN. The Morse Floral Company has opened a store on Church street. The greenhouses at 536 Townsend avenue will be continued. E. J. Morse, the manager, is well known locally and familiarly known as Captain Morse. He was captain of the Second Company Governor's Foot Guard for eight years.

Adiantum Regina, 4 in., \$2.00 per doz., \$22.00 per 100; 5 in., \$6.00 per doz., \$45.00 per 100.
Cibotium Schiedei, 4 in., \$3.50 per doz., \$25.00 per 100.
Nephrolepis Scottii, 6 in., \$7.00 per doz., \$60.00 per 100; 8 in., \$15.00 per doz., worth the double.
Elegantissima and Pteronol, 5 in., \$5.50 per doz.
Fern Spores, gathered from my own stock, guaranteed fresh, 1907 crop, good, commercial varieties, 30c. per trade pkt.; \$3.00 per dozen.

J. F. ANDERSON Short Hills, N. J.

Bushy Ferns

Unusually fine stock of the Holly Fern (Cyrtomium falcatum), Pteris cretica albo, Pteris Wimsetti, etc. 3 in. pots, 6c.; 2 in. pots, 3c. We have never had better plants and will give you very liberal credit on January orders.

Cibotium Schiedei, 3 in. pots for growing on, 20c.
ASPARAGUS Plumosus, extra strong 2 in. stock but with some of the foliage slightly damaged. Give them a small shift and they will make fine plants \$2.00 per 100.
PRIMULA Obconica Grand. In full bloom. 3 in. pots, 5c.; 2 1/2 in. pots, 6c.; 4 in. pots, 8c.

R. G. HANFORD, NORWALK, CONN.

FERNS

Boston, Scottii, 4 in 15c.; 6 in. 40c. Some extra heavy Scottii at 50c. each. All pot grown.
Asparagus Plumosus, 2 1/2 in., \$3.50 per 100.
KENTIA Belmoreana, 4 in., \$25.00 per 100.
Standard varieties of carnation cuttings at popular prices.

H. WESTON, Hempstead, N. Y.

FERNS, FERNS, FERNS

Fine stock of assorted Ferns in best market varieties from 2 1/2 in. pots, at \$2.00 per 100 plants, or \$26.00 per 1000.
Cibotium Schiedei from 4 in. pote, at \$30.00 per 100 plants.

THOMAS P. CHRISTENSEN, Short Hills, N. J.

FERNS For Jardinières

Best varieties, strong, healthy plants from 2 1/2-4-inch pots, \$3.00 per 100; \$25.00 per 1000. 500 at 1000 rate. 3-inch, \$6.00 per 100.
CIBOTIUM Schiedei, 6-in. pots, \$1.00 each. Nephrolepis Scottii, 7-in. 75c. and \$1.00 each; 9-in. \$1.50 and \$2.00 each.

FRANK N. ESKESEN, Main Street, Madison, N. J.

NEPHROLEPIS

WHITMAN, 2 1/2 in. \$5.00 per 100; 3 1/2 in. \$25.00 per 100.

and
235 Broadway, Room 1, New York City.

ORCHIDS
We are now booking orders for freshly imported orchids of all leading kinds to arrive during 1908, at greatly reduced prices. Write us for information as to kinds and prices.
We have just received the following orchids: Oncidium Tigrinum, O. Sarcodes, O. Forbeii, Sophronitis grandiflora and coccinea.
LAGER & HURRELL, Summit, N. J.

ORCHIDS
We shall receive this Spring large quantities of imported ORCHIDS, namely: Cattleyas, Dendrobiums, Oncidiums, Laelias, Vandas, etc. Our facilities for handling large consignments are second to none. We have four collectors, including our Mr. Carrillo, who collect exclusively for us. Our quality and price are too well known to need further comment—a trial order will prove it.
CARRILLO & BALDWIN, Secaucus, N. J.

THE WEEK'S WORK

Timme's Timely Teachings.

Tender Bulbs and Tubers.

Attractive greenhouse display at all seasons of the year contributes in great measure to a lively flow of business at even the duller of periods, such as every retail grower must be prepared to pass through at times. For the months of Summer it is never difficult to make provision for a perfect feast of floral splendor to be spread before the admiring eyes of patrons and chance visitors. Probably nothing for that season more fully serves the dual purpose of inviting and supplying trade than the tender bulbous and tuberous-rooted kinds of Summer-flowering and foliage greenhouse plants. Of these there is a wide range in varieties belonging to a number of different species and orders, but all so very near alike as regards treatment under glass during Summer that their culture under one roof presents no obstacles in the way toward best results. Especially worthy of being grown by retail florists for the purpose are fancy-leaved caladiums, callotas, ismenes and various hybrids of the amaryllis tribe, tuberous-rooted begonias of all kinds, a few of the large-flowering cannas, gesneras, gloxinias, achimenes and sinningias, all sure to add a wealth of brightest color to any collection of plants arranged for effect under glass throughout the hot months of Summer. In order to provide for a continuous array from the beginning of the warm season until quite late in the Fall it is needful to start some of the bulbs, corns or tubers now and another lot five or six weeks later. Some of the kinds may to advantage be raised from seeds, growing into flowering plants by next Summer or Fall, if sown this month.

Starting the Bulbs.

To obtain the best results in the starting of tender bulbous plants and roots at this early date a steadily maintained temperature of about 65 or 70 degrees above and underneath the bulbs and a congenially moist atmosphere rather than inordinately moist soil must be relied upon. Gloxinias, fancy caladiums, hybrid amaryllis and others which always show up in soundest condition when carried through the Winter in some fairly warm and dry place in the same soil and pots in which they were grown and flowered the previous season, are taken out, freed of dead leaves and dry earth and replanted into fresh soil, this to be a mixture of very sandy, fibrous turf, well-weathered manure—that from last year's hot-beds being best—and leaf mold in about equal parts. The pots or pans should be clean and well drained and the soil nicely broken up but not screened. Placed on a pretty warm bottom, the soil at first merely kept moist enough so as not to be really dry, new life will soon break forth, this in the case of most varieties of amaryllis in the form of embryo flower stalks. It is then time to be a little less sparing in the matter of affording water, light and a reasonable amount of air. When finally the plants are well under way in rapidly progressing sturdy growth their requirements are fully met in nearly every particular under practically the same treatment as that accorded most other hothouse subjects.

Starting the Tubers.

When considerable numbers of the foregoing bulbs, as also cannas and like roots, but in particular begonia and similar tubers and corns, are to be started early, it is best to plant them somewhat close together in trays or flats filled with sandy peat, leaf mold or a mixture of sand and finely broken-up sphagnum, with a view toward a shift from these into pots after growth has started, since a uniformly even break of crowns and roots at this season is not to be expected. The flats are placed on brisk bottom heat, the soil kept moist, but not wet, by sprinkling rather than can watering, and as dormant life is thus incited into renewed action the amount of humidity in soil and air is slowly increased, more direct light afforded, and soon quite a number of plants will have made sufficiently strong growth to be carefully lifted out from the less advanced and potted, the laggards to be dealt with in like manner later on. Those potted up should still have the benefit of bottom heat until firmly established. In their final shift a much more enriched and somewhat heavier kind of soil should be used than in starting the tubers. If later in the season a place for these earliest lots

could be spared in some moderately warm outdoor frame, until assigned to duty in the conservatory or show house, very much would be gained thereby in vigor and substance of growth and bloom. So also will occasional light doses of liquid manure, applied when coming into and while in flower, tend to keep the plants in line shape for a considerable length of time. Especially do cannas need some sort of stimulant when in bloom and under pot culture in a house during the Summer, and the earth in which they are expected to do their best should be of the richest. If liberally fed and copiously watered, none of all those included in this list of Summer-flowering plants will brighten up a greenhouse as will the better kinds of cannas. For this reason alone a limited number of these deserve to be started thus early, but in a place where cannas form one of the more important items in the line of bedding stock to be handled, these early starters also serve as the most efficient of advance agents advertising the coming show as nothing else would.

To Be Done Later On.

The later toward Spring tender roots, bulbs, tubers and corns are roused into renewed action the more anxious they will be to respond to efforts made to that end by the grower. There will therefore be little difficulty in starting the later lots, including such as are to be offered in quantity for outdoor planting, which, to be satisfactory stock for that purpose, need not be started before the middle of March.

The very best place for this sort of proceeding at that time and for several weeks later is invariably a newly made hotbed after having been allowed first to cool down to about 65 or at the most 70 degrees of steady heat at night under closed sashes. A good material into which to dibble the bulbs and tubers, or in which to pack the pots containing such, is a layer of from six to ten inches above the heated manure of very old sawdust or tanbark or of fibrous, turfy loam, leaf mold or earthlike, porous, old manure, these substances to be well intermixed with chopped moss and sand—anything in the soil line that will drain off surplus moisture readily and cling to newly made roots when the plants are ready to be lifted and potted.

This is the most satisfactory mode of starting the more tender kinds of Summer-flowering bulbous plants, and besides those already named it will work equally well in the case of numerous others, such as tigridias, achimenes, spekelias, montebrias, crinumms, ismenes, eucharis, Caladium esculentum, spotted leaved callas and many varieties of hippeastrum. In proportion as the weather gradually becomes warmer from day to day, so will the heat in the hotbed decrease with a slowly diminishing amount as supplied by fermentation. The plants, then well forward, must be attended to as required, and if this is done as regards transplanting, ventilation, watering and shading, the grower will have far to look for better stock, and still not find it.

Seedling Gloxinias.

Although excellent for the conservatory or under the lightly shaded glass of greenhouse or outdoor frame, gloxinias, unlike tuberous begonias, are not to be recommended for open air garden planting. They also prove somewhat disappointing as dwelling house or parlor plants, but less so than tuberous begonias, which latter, when in bloom and under the care of unskilled hands, hardly ever receive the amount of water they then require. Seedling gloxinias endure the hardships inseparable from exposure to dwelling room conditions much better than those grown from matured bulbs; and it is no difficult matter to raise such. The issue from a good strain of seeds, sown early, is a lot of fine, vigorous plants flowering throughout the latter part of the warm season. A very few of them will probably not be fully up in point of excellence to what the critical grower declares to be good gloxinias, but by far the greatest number will be as fine a lot as any ever beheld by admiring eye, much varied, it is true, as to habit of growth and manner of carrying the bloom, but all beautiful in their coloring, no two being alike in this, but all alike sturdy, vigorously bright pot plants.

A reasonable amount of care is necessary in the starting of the seeds, and unfeeling heat and moisture will do the rest. Earthenware seed pans are to be preferred to the wooden flats in this case. These are filled within very close to the rim with roughly broken-up pieces of turfy soil or sods in a well forward state of dissolution, such as are to be found about any compost heap of long stand-

Always in Demand

ARAUCARIA ROBUSTA COMPACTA and GLAUCA

JUST LOOK! An ARAUCARIA ROBUSTA COMPACTA OR EXCELSA GLAUCA, worth a ten dollar bill, per foot shape and color, 6 7/8 in. pots, 6-year-old, 4-5-6 tiers, 28 to 40 in. in height, the same in width, only \$3.00; 6 7/8 in. pots, 6-year-old, 4-5-6 tiers, 25 to 28 in. in height, \$2.00 and \$2.50; 6 7/8 in. pots, 6-year-old, 3-4 tiers, 18 to 25 in. high, \$1.50 to \$1.75. **EXCELSA**, 6 7/8 in. pots, 5-6 tiers, 25 to 30 in. high, \$1.50; 6 in. pots, 6-year-old, 5 tiers, 22 to 25 in. high, \$1.00 to \$1.25; 6 in. pots, 4-5 tiers, 4-5-year-old, 18-20-22 in. high, 75c.; 2-year-old, 2-3 tiers, nice little plants, 6-8 in. high, 40c.

WHITMANI, larger than 8 in. pot, planted in 7 in. pots, made up in June, three plants in a 7 in. pot, now as large as a bushel basket, price, \$1.25 to \$1.50 per pot, middle size, 75c.; very heavy specimens, \$1.00 per pot, 6 in. pots, 60c. to 75c.

PIERSONI FERNS 4 in., 25c.; 6-5 1/2-6 in. pots, 35c.-40c.-50c.

PIERSONI WILSONI, 5 1/4 in. pots, very handsome, much admired ferns, 20c.

AZALEA INDICA, have an immense stock now planted in 6 in. and 7 in. pots, were grown for us under contract by an Azalea Specialist in Ghent, Belgium. Have only the leading varieties such as, *Mme. Van der Cruyssen*, (2500 of this well known variety of the finest shape, full of buds), *Niobe*, *Bernard Andrew Allen*, *Deutsche Perle*, *Simon Mardner*, *Empress of India*, *Prof. Wolters*, *Apollo*, and 1/2 doz. more popular sorts, price 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75, \$2.00, \$2.50 each.

BOSTON FERNS, Here about 2500 of this variety, 8 in. pots, made up as big as a wash-tub, worth \$3.00, \$1.25, \$1.50 each; 7 in. pots, as large as a bed basket, worth \$2.00, cut down to 15c. and \$1.00 each; 6 in. pots, very large, worth \$1.00, only 60c.; 5 1/2 in. pots, 25c. and 40c. each.

KENTIA Forsteriana and Bismarckiana, 4 in. pots, 8 to 20 in. high, 5c. to 25c.; 6 in. and 6 in. pots, bushy stock, plants, 50c., 60c., and 75c.

LANTANA Borbonica, 4 in., strong, 25c. each.

COCOS Weddelliana, 3 in. pots, 10-12-15 in. high, 15c.

ARECA Lutescens, 4 in. pots, made up three plants in a pot, 18-20-22 inches high, 20c. each.

FICUS ELASTICA or RUBBER PLANTS, home grown and Belgium stock, 18-20 to 40 in., 5-5 1/2 to 6 in. pots, 25c.-35c.-40c.-50c., and 60c. each, 7 in. pots, 75c.

ASPARAGUS plumosus nanus, 3 in. pots, \$7.00 per 100; 4 in. pots, \$10.00 per 100; all bushy plants.

HADRANGEA OTAKSA, Now is the time to force *Hydrangea Otaksa* for Easter blooming. Remember only pot grown will form successful for Easter; we grow ours in pots in the summer and plant them in cold frames (row inside); have about 500 to spare, 6 in. and 7 in. pots 25c., 25c., 50c., and 75c. each.

BEGONIA, new improved *Erfordi*, 4 in., strong; 20c.; 5 1/4 in., 25c. each.

Please mention if plants are to be shipped with or without pots. All goods must travel at purchaser's risk. Cash with order, please.

VIOLETS VIOLETS

Marie Louise, ready August 1st, clean and healthy in every particular. 3 in. pots \$6.00 per 100. Cash with order.

Wm. J. CHINNICK, Trenton, N. J.

greater importance are several other points that should never be lost sight of in the use of tuberous begonias for open air culture. Plants in full bloom, such as recommended for display, taken from the greenhouse into the garden, will invariably prove a sorrowful failure within a week or two. Sturdy plants, started from bulbs in the beginning of April, especially when reared in outdoor frames, survive free exposure and faulty selection of place combined with want of proper care much longer, but the best kind of stock for the purpose, if mixed colors have been decided upon, are seedlings, the seed to be sown in February and accorded the same treatment as advised for the starting of the seeds and the subsequent care of the seedlings in the case of gloxinias.

Even if it were as possible on every place as it is desirable to find an ideally situated spot for such a bed, one lightly shaded by a few far-reaching branches of trees a foot or two away during the sunniest hours every day, there would still be the impending danger of possible failure owing to unsuitable, exhausted soil, insufficiency of water at the roots of the plants in dry spells of weather, a very common occurrence, and, finally, the worst depolar of beauty in a bed of tuberous begonias, the high, dry wind on a hot Summer day. **FRED. W. TIMME.**

Tuberous Begonias from Seed.
A beginning with matured tubers in the raising of this class of begonias for open air effect has the one advantage over a start with seeds that separate colors may confidently be looked forward to in the planning of beds and borders, if it is so desired. It is a question whether such an arrangement of several colors by themselves or one color alone in a bed or band of flowering tuberous begonias would prove more effective than a bed exhibiting a diversity of shades. Of

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Delivers anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BEETEMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIETH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

Ban on Plant Loans.

Mayor Hibbard of Boston has put his official ban upon the use of potted plants and floral decorations from the municipal conservatories for private social affairs throughout the city. The mayor was called upon last week by a committee of young people who wanted to borrow potted plants from the city's conservatories, and he was amazed at such a request. When informed that it was customary for years to secure such displays for the asking, he immediately notified those in charge of the municipal conservatories not to loan any more flowers or potted plants for private use. In years gone by and until the present administration it was a very common occurrence for the city to distribute scores of potted plants at halls where social affairs were being held, and the city paid for all the carting.—Boston (Mass.) Morning Herald.

and his staff, one has to sample the sumptuous dinners served at the Home on this and similar occasions. The preparation of 3,000 yards of roping and other material used in decorating the various mess rooms, hospital, chapel, etc., and its final arrangement, was practically all done by inmates of the home, employed in this department.

I hope to see many of your readers here during 1908. No one ever regrets a visit to this naturally beautiful spot. It may be that Togus has not yet developed as much of interest to the profession as some of the other Homes, but, my masters, the joys of achievement are before us, for Togus has unlimited possibilities, and when the writer was entrusted with the care of those possibilities, his lines fell in exceedingly pleasant places, inasmuch as Colonel Richards, governor of the Home, is a true lover of horticulture in all its branches, and is as practically enthusiastic and interested in the improvement and development of the reservation as he is in the welfare of the 2,500 veterans within its borders.

Togus, Me.

A. W. McINTOSH,
Chief Gardener.

Christmas Decorations of Soldiers Home, Togus, Me.

Christmas Decoration at a Soldiers' Home.

The photograph herewith reproduced of the large mess room at the Togus (Me.) branch of the Soldiers' Home was taken while the holiday decorations were in place. Owing to certain conditions, however, it was impossible to secure a picture that would give a comprehensive idea either of the decorations or the splendid proportions of the hall (a room 149x84 feet and 18 feet in height, and in which 2,500 veterans are fed three times daily). Some 20 feet of the foreground has been of necessity omitted, and the decorations along the walls, doors, and windows cannot be guessed at from the picture. The large tree fronting the National colors, at the rear of the hall, was trimmed with electric lights and poinsettias and was a notable feature of the decorations in this building. However, the photograph may serve to give your readers some idea of what is done in this line to accentuate the holiday season at Togus.

But to appreciate properly the manner in which the old soldiers are cared for, and the hearty interest taken in their comfort by Governor Richards

PAMPHLETS RECEIVED.

FORESTRY IN THE PUBLIC SCHOOLS.—Circular 130, Forest Service, Department of Agriculture, Washington, D. C. By Hugo A. Winkenwerder, Forest Assistant.

The object of this circular is not to advocate the adoption of another study to the public school curriculum, which in many cases is already too cumbersome, but rather to point out whereby the subject of forestry could be introduced in association with some of the studies that already form part of the public school instruction. Among these are nature study, general geography, arithmetic, United States history, civics, physical geography, commercial geography, botany, woodworking and agriculture. Under each of these subjects is provided an "outline for study," showing just how the object aimed at can be accomplished.

The Forest Service, under Gifford Pinchot, is doing admirable work in its especial line for the older folks interested in forestry; and the bulletin before us is an evidence of the desire of the Service to get the young equally interested—for which purpose the pamphlet should prove of immense service. The suggestions furnished for the making of forestry teaching an integral part of the existing school curriculum are most excellent, and will be found of great utility to all teachers.

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers. If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases. (The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 600 for \$1.60, and can make a reduction of those prices on large quantities. At a small extra cost we can put your imprint on each leaflet. Try a thousand and see what a help they are in selling goods. A. T. DE LA MARE PTG. & PUB. CO., Ltd. P. O. Box 1697 NEW YORK

The American Carnation Society

FULL REPORT OF THE PROCEEDINGS AND EXHIBITION SEVENTEENTH ANNUAL MEETING, WASHINGTON, D. C., JANUARY 28 TO 30, 1908

Officers elected: President, M. A. PATTEN, Tewksbury, Mass.; Vice-President, A. F. J. Baur, Indianapolis, Ind.
Secretary, ALBERT M. HERR; Treasurer, FRED. DORNER, JR.
Next place of meeting, Indianapolis, Ind.

Favored once again by most propitious weather, the American Carnation Society opened its seventeenth annual meeting and exhibition at Washington, D. C., on Tuesday, January 28, continuing till Thursday, January 30. The attendance was large and representative of the carnation growing centers of the country.

The exhibition was fully equal to, if it did not surpass, that held at Toronto last year, and the quality of the stock shown was of a high standard throughout. The National Rifles Armory, where the exhibition was held, was lighted on the two sides only, and artificial lighting had to be resorted to—probably the only slight drawback to otherwise excellent arrangements. President Peter Bisset, Superintendent Charles McCauley and others of the local club, rendered admirable assistance, and their labors did much to facilitate the work of staging and judging. One o'clock was the hour named for closing the staging of the competitive classes, which were all in place by that time.

A brief session was held on the forenoon of Tuesday for the purpose of electing three additional judges, when the following gentlemen were chosen: Messrs. M. A. Patten, Tewksbury, Mass.; Peter Fisher, Ellis, Mass.,

a few well-chosen words expressed his appreciation of the honor conferred upon the Capitol City in having the American Carnation Society's convention and exhibition in Washington, and referred in approving terms to the work of the Society. He then introduced the Hon. Mr. MacFarland, chairman of the Board of Directors of the District of Columbia, who extended a welcome to the Society. He said in part: "We, of the government of the District of Columbia, are very happy to offer the American Carnation Society a hearty welcome to the city of Washington, a Society whose title brings Canada, as well as the United States under the name America; for we believe all Canadians and men of the United States alike are Americans. I hope the delegates from beyond the border will feel just as much at home as the men who represent our own country."

The speaker then went on to tell of the courtesy and hospitality of the Canadian people, of which he himself has had personal experience. We expected that all Americans would feel at home in the Capitol City, and needed not its freedom extended to them. The citizens of the District contributed about 16½¢ per capita to developing and maintaining the City of Washington, those outside 6½¢ each for these expenses. He believed all would be glad to contribute even a greater sum toward that end. The Commissioner then paid tribute to the Society and the flower it stands for, and feelingly referred to the late President McKinley's great love for the carnation. Wednesday, January 29, McKinley's birthday, would be fittingly celebrated in Washington by a general wearing of the divine flower. The speaker was pleased to know that the late President's memory was to be perpetuated by such a beautiful blossom as the carnation. It was fortunate, he thought, that the American Carnation Society was the only organization that represented the flower which is associated with any American statesman. He hoped to see as much interest taken in Carnation Day in America as was done in Primrose Day in England, which kept fresh the memory of Beaconsfield.

"I welcome you as Americans all," continued the Commissioner, "and trust that your visit may be often repeated, and that you will enjoy every hour you are here." (Great applause.)

E. R. Pierson, Tarrytown, N. Y., replied to the address of welcome. Mr. Pierson dwelt particularly on the international character of the American Carnation Society, which knew no territorial limitations. He was pleased that the high standard of the exhibition at Toronto last year had been maintained at Washington, and emphasized the need of perpetuating McKinley Day by wearing carnations. He believed the Washington convention would be a memorable one in the history of the American Carnation Society. (Applause.)

John H. Dunlop, Toronto, Ont., made a few remarks on behalf of the Canadian brethren, and was especially glad that their efforts last year were so highly successful and so much appreciated. The improvement in carnation culture was seen everywhere, and every exhibition of the American Carnation Society but demonstrated the advances making along this line.

Mr. Bisset then thanked the members for his election last year as vice-president of the Society, and introduced President Fred H. Lemon, who read his address as follows, his remarks being closely followed, and greeted with applause.

President's Address.

It has been the custom for a number of years for the president to share in extending a welcome to the members of the American Carnation Society. To-day the seventeenth president has the privilege and honor of sharing in the expression of thanks and appreciation for the hospitable reception and cordial welcome extended by the convention city.

It must be remembered at this time that the real work of preparation for this convention has been done by our most worthy vice-president, Peter Bisset, and his able

assistants in Washington. Allow me to express at this time my personal appreciation of the unflinching courtesy and the untiring zeal and activity of the vice-president, which, together with the efficient services of the secretary, made possible this most successful exhibition and convention.

The Certificate.

Reference has frequently been made during the last few years to the subject of the society's certificate. It is a pleasure to refer to the eminently sensible and correct settlement of the controversy at the convention in Toronto last year. The remarks on the subject by our honored member, W. N. Rudd, contain the best exposition of the aims and province of the American Carnation Society to be found in all its literature. It is indeed true, as stated in those remarks, that "the certificate is nothing except an opinion of the quality of the flower shown at the exhibition. The commercial value of carnations must be ascertained in other ways; and it is beyond the ability of this society, beyond its province, to attempt to say whether or not a certain carnation shall prove a profitable investment to the buyer." I wish at this time to endorse most emphatically this position in relation to new varieties and to urge the society to encourage in every way possible the production of new

Alma Ward

Grower, Cottam Gardens Co.

and S. J. Reuter, Westery, R. I. The other judges were: Messrs. W. N. Rudd, Morgan Park, Ill.; William Nicholson, Frammingham, Mass., and Eugene Daillouze, Flatbush, N. Y.

First Session, Tuesday, 7.30 P.M.

The first session of the Society opened on Tuesday evening at 7.30. Vice-President Peter Bisset, who is also president of the local florists' club, presided, and in

CARNATION AFTERGLOW.

Winner of the A. C. S. Silver Medal and other prizes. Grower, R. Witterstaetter, Cnemati, O.

kinds and especially the exhibiting of new things at our annual shows.

Value of the Society's Awards.

There has been a decided inclination during the past few years to belittle the value of the showing made by a carnation at the American Carnation Society's exhibitions. Opinions of this kind have been expressed by many prominent members and have even crept into a number of addresses by our past presidents. I desire especially to emphasize my opinion that any variety which can win the American Carnation Society's medal or obtain first place in one of our "open to all" classes,

must possess many points of exceptional merit. The fact of its winning is prima facie evidence, and is incontrovertible, for the judgment is the expressed belief of at least two and more often three of the leading experts of the country, that such variety has produced blooms superior to any others of its class. The trade at large, and particularly members of this society, should accept this at its full value; that is to say, should recognize such action as coming from the highest tribunal and as being the best opinion obtainable in the United States on the subject. The idea that the American Carnation Society does thereby guarantee such variety to be a profitable one to grow commercially is a false position and should be avoided in the future. The society as a body can possess only the presence of its integral parts, its individual members, and what man among us can unflinchingly predict a carnation's future even after studying the variety from all vantage points? The production of fine blooms is a prime requisite and with this alone should the society concern itself, leaving prophecies as to the probable future of a variety to individual judgment. Any practical grower of carnations should consider the grant of a certificate or medal by the American Carnation Society as the very highest recommendation possible and amply sufficient proof of merit to justify a thorough test and earnest effort to grow the variety as well as it has been grown by the raiser.

Proven Merit Should Be Recognized.

However, there is one point in this connection which does come within the province of this society, and that is, the proper recognition of merit which has been abundantly proven. Seven years ago, at Indianapolis, when the fatal illness of the president, Wm. J. Bertram, placed me in the position of acting chairman, I suggested that the society ought to take some action commending the raiser of any carnation which has proved itself the premier variety of its class for a number of successive years. No attention was given the suggestion at that time, but my opinion has not changed on the subject. I believe that when any variety wins first prize in any class A (open to all) section for three successive years, the raiser of such variety should be granted the society's gold medal, fittingly engraved, as an award of sterling merit. It is at least a subject worthy of discussion.

There ought also to be a sweepstakes prize covering class A (open to all) section.

Entrance Fees for Certificate Classes.

To refer again to the certificate classes: I believe that the entrance fees in both preliminary and final certificate classes should be omitted, *except when such certificate is granted*, and that the only restriction placed on exhibiting in these classes should be membership in the society. This should be done for the purpose of increasing the number of exhibits in these classes. The judges may be depended on to sift properly such candidates.

Exhibits of Carnations in Pots.

Reference has been made annually, since the inception of this society, to the proposed exhibition of carnations in pots. Ex-President Rackham spoke of the matter in his address at Detroit. John Birnie made a strong plea for such varieties in his able paper read at Toronto last year. Now to accomplish anything in this line it will require a radical step by the society and it may as well be taken at once. Offer a good substantial prize for the best collection of plants in bloom in pots. To do this, without increasing the amount devoted to the premium list, reduce the breadth and scope of class B, which, as it now stands, tends toward monotony in the exhibition.

The Carnation in Decorative Work.

Also, if it were possible so to divide the money devoted to premiums to admit of it, a certain amount ought to be devoted each year to exhibitions showing the adaptability of the carnation to reception and wedding decorations. Competitive contests among local retail men are not practicable, but some prominent retail man might be selected to prepare some such exhibit each year, as this would interest the public greatly and add to the beauty of the exhibition.

Interest of Foreign Growers.

The very valuable papers from foreign carnation growers last year, together with the reports appearing in our trade papers from time to time, indicate the rapid strides making by our co-workers in England in the development of the overblooming carnation. Such reports should stimulate the activity in America, for we should retain our supremacy in this line.

Taking into consideration the formidable opposition in the securing of new varieties of carnations which the English breeders have now presented, would it not be a good thing to make some arrangements whereby new English sorts could be sent here for test as to their adaptability to American conditions and markets? Probably some exchange of novelties could be made between growers in the United States and those in England for this purpose. A great deal of interest is now being taken in American varieties over in England, and the same thing is likely to happen with English varieties in the United States; hence it would be well for the Ameri-

can Carnation Society to take the first steps aiming toward cooperation.

Registration.

In the matter of the registration of new varieties, the opinion has been expressed by interested members that the society ought to omit all superfluous verbiage as to whether the new variety is better than others of its kind, and give simply the name, the parentage, the date when the cross was made, and the color. A uniform registration blank should be adopted and this should avoid any appearance of indorsing the good qualities of a new kind.

Co-operating with Other Organizations.

At the Chicago convention in 1905 action was taken authorizing the offering of American Carnation Society's certificates at the Fall exhibitions in our leading cities, and the appointment of judges for such exhibits. A committee was appointed with power to act, but the plan never was carried out. This should be taken up and some definite action taken. The S. A. F. O. H. has invited the co-operation of our society in the National flower show to be held in Chicago in November of this year, and we should offer our certificate and medals at that great exhibition.

It is with great pleasure that I look forward to the joint meetings with the American Breeders' Association. I hope and believe that much of benefit to the practical grower will result from the joint discussions on carnation breeding. If there is anything tangible as regards Mendel's law in relation to the breeding of carnations, it should be brought out at this time.

The business sessions of the convention in Toronto were the best attended of any convention in a number of years. I am counting on the members to surpass that record in Washington.

Returns Thanks.

In closing I desire again to join with the visiting members of this society in appreciation of the efforts of the Washington florists which have made possible a successful convention.

It is a high honor to be chosen president of the best, most business-like, and most effective florists' organization in the United States, and I thank you most heartily for that honor.

The report of the secretary, Albert M. Herr, Lancaster, Pa., was then read, as follows:

Secretary's Report.

Your secretary reports having issued the regular printed matter of the society during the past year. Our annual report was more complete than usual, thanks to our stenographer, who being from my own city, the report could be worked out to better advantage than could possibly be done by correspondence.

The premium list and dates for the meeting were discussed and adopted at the meeting of the board of directors held in Philadelphia last August, quite a few changes being made in the premium list and a three-day session agreed upon as an experiment, all of which was duly announced through the trade papers.

Date of Show Opening.

It has since developed that a portion of intending exhibitors are not able to get their flowers through in time for staging by 1 p. m. Tuesday. I would suggest that a part of our meeting be set aside for the purpose of adopting a premium list, a set of rules governing the exhibition, and the best date for the opening of the show in 1909. With exhibitors, judges and the board of directors all present, mistakes and friction could be avoided. The exhibitor being the first consideration in our shows should have first consideration in our premium list.

Advertising in Premium List.

In the opinion of your secretary the matter of advertising in our premium list should be dispensed with; the members do not patronize it to any extent, even after personal solicitation, and it is hard to get outsiders to look upon it as a good business proposition. For the list issued this year a circular letter was sent to all members of this society, followed by a personal letter to the possible advertisers (in some cases two and three). In addition to this, personal letters were sent to about four hundred other advisers, with the results shown before you. The getting up of the premium list, aside from the solicitations, is almost as much work as getting out the annual report, and after deducting the extra cost of printing there is such a small margin of profit that it is hardly just to your secretary to pile all this work upon him.

A pet scheme of my own was tried this year; an invitation was sent to every florist within a radius of one hundred miles from the meeting place to join the society; the responses were two new members and several inquiries, a result that teaches its own lesson.

In addition to all of the foregoing there have been about seven hundred pieces of mail, mostly personal letters in response to inquiries, and the regular correspondence between this office, your president and the board of directors.

Would Retire Next Year.

Your secretary requests that you will select a successor for the coming year. It is a matter of office for one year longer in order to carry out the other matter that would have to be done before he is released. The work of the society is not very heavy, a ratio of about three to one as compared with other clubs; it is a work that ought to be done and done so that in making your selection it will be wise to choose a secretary who has been and is now devote to this work, and one who employs clerical help to whom can be given the routine part of the work. Your present incumbent having served the society for thirteen years feels that with another year's service to break the hoodoo, he has borne his share of the work, and that some one more competent and better able to give the time and labor required should take it up and carry it on to completion.

Mr. Rudd here moved that a committee of three be appointed to consider and formulate action on the suggestions contained in the President's address, said committee to report at Thursday's session. Mr. Larson appointed on this committee Messrs. Rudd, A. T. J. Burr, and John R. Fotheringham.

The treasurer's report was read by Fred E. Donner, an abstract of which follows:

Report of Nomenclature Committee.

Secretary Herr read the report of the Committee on Nomenclature as follows, which was adopted:

Your committee reports the registration of four single buds and three sports for the past year, a very poor showing judging from the amount of novelties described in our trade papers.

We would suggest that a circular letter be gotten up for use by the chairman of this committee to mail to a grower as soon as he describes a new carnation in one of the trade papers, this letter should show the advantages of and the necessity for registration, and demand that he register the name of his variety if he has any intention of growing it commercially. We, of course, cannot compel registration, but we can demand it on our right, and there are very few growers, members of this society or not, who would not honor the demand.

Another point for action by your society is the enormous increase of sports that are being put on the market each year. Your committee recommends that each of these sports be given a distinct name, and when offered to the trade as rooted cuttings that the description announce what they are a sport from. As it now stands we have four or five Lawsons, as many Earlhambres and endless confusion reigns supreme. If such a distinct name wholesalers and growers would not be at a loss to know which was wanted when orders are sent by wire or letter.

ALBERT M. HERR, Secretary.
ARTHUR HERRINGTON, Treasurer.
EUGENE DALLEDOZZI, Clerk.

Invitations for Next Meeting Place.

The secretary read invitations from the Pittsburg and Allegheny Florists' Club, and from the State Florists' Association of Indiana, asking the Society to hold its 1909 meeting in Pittsburg and Indianapolis respectively. Selection takes place to-morrow.

Nomination of Officers.

For President M. A. PALDEN, TAWKSBURY, MASS., nominated by Mr. Nicholson.
This was the only nomination for president.
For Vice President WILLIAM FALCOWER, PITTSBURGH, nominated by T. P. Langhans, A. T. J. BURR, INDIANAPOLIS, nominated by Fred E. Donner.
For Secretary ALBERT M. HERR, nominated by several.
For Treasurer FRED E. DONNER, nominated by Wm. Rowland, Erie, N. Y., and John N. May, Summit, N. J.

Judges to fill the vacancies caused by the resignation of William Scott, on account of ill health, and the expiration of the term of William Nicholson, were nominated as follows:

Peter Fisher, Ellis, Mass.; Mr. Nicholson and Eric Burki.

For Directors: James S. Wilson, Western Springs, Ill., was nominated by Mr. Rudd to succeed him.

Secretary Herr then read the report of the judges, which will be found in another column.

The meeting then adjourned.

The Exhibition.

As mentioned, the exhibition was a grand success, a magnificent lot of flowers being staged.

Among the whites Alma Ward showed to excellent advantage, capturing the gold medal of the Carnation Society, the S. A. F. silver medal, and was also first for 100 blooms white. Afterglow was also seen in fine form and secured the silver medal of the Society, as well as the S. A. F. bronze medal. The A. C. S. bronze medal was likewise won by the Cottage Gardens Company, with Mrs. C. W. Ward. The various winning sorts are mentioned in the prize list; these will give a good idea of the best blooms shown in the various classes.

Pink Imperial showed fine, and Winsor met all expectations. There was a close tie between Lady Bountiful and White Enchantress as next best to Alma Ward. One excellent case of Lieut. Peary took special prize for the Cottage Gardens Company. Beacon among the reds had the others outclassed.

M. A. Patten of Tewksbury, Mass., sent some fine seedlings, including a magnificent White, numbered 46-205; a yellow variegated and a pink. A splendid vase of 50 Welcome, grown by the Chicago Carnation Company, was particularly fine; Melody, a light pink, which was shown by F. R. Pierson Co., along with Enchantress, were fittingly recognized by the judges.

Creole Beauty and Wa-no-Ka were close rivals and in a class of dark reds distinctly alone. Toreador was rendered conspicuous by reason of its long stems and showy flowers. Apple Blossom was a distinct novelty, shown by Wa-no-Ka Greenhouses, and made a handsome vase.

Mrs. C. W. Ward, which was of the most exceptional high class pink, bids fair to win favor along with Alma Ward.

Splendor, grown by Stephenson Brothers, Govanstown, Md., is a most promising variety. Its color is intermediate between those of Winsor and Mrs. T. W. Lawson, and it has every evidence of being a first-rate commercial carnation.

Aristocrat showed up gorgeously under artificial light. John Reimels' scarlet seedling Number 32 is an attractive variety and was greatly admired.

Apple Blossom is a well-shaped flower, with good stem, its only lack being that it is a little undecided in color.

Among variegated kinds Mrs. M. A. Patten is the leader. Bay State, from Roper, is also a good variety in this class, but it was not in the best condition as exhibited.

Victory was shown better than last year; it must still be considered as one of the good scarlets.

Enchantress leads in its class.

It was noticeable that Mrs. Thos. W. Lawson did not show to advantage this year; opinions were expressed that this once great leader had been superseded by newer sorts.

Creole Beauty is a fine thing in the maroon class, being, as far as seen at this show, the finest in its particular color.

The variety Wa-no-Ka is also a promising variety in this class.

F. H. Kramer of Anacostia, D. C., exhibited a large vase of Queen Beatrice rose, banked with adiantum. The Mrs. Jardine rose, sent by Robert Scott & Son, Sharon Hill, Pa., showed up well and to much better advantage than at the last flower show in this city in November.

Rose Rhea Reid seemed finer and fresher than when last exhibited and made one of the finest individual displays offered.

F. R. Pierson Co. had a splendid specimen plant of the new fern *Nephrolepis superbissima*, a marvel of beauty. Wm. Sim, of Cliftondale, Mass., showed his new single violet Boston, which found many admirers.

Peter Bisset, of Washington, exhibited a vase of seedling roses, crosses of Queen Beatrice in each case, with K. A. Victoria; General MacArthur and Enchanter; all were most promising and attracted considerable attention.

Kroeschell Brothers Company liberally distributed their handy carnation measure, which was much appreciated. They had on exhibition a model of their well-known hot water boiler, in charge of Fred Lautenschlager.

The Baur Floral Company, Erie, Pa., showed their carnation clip, and gave a demonstration of its practicability in mending bursted calyxes.

The Seedlings.

There were quite a number of seedlings on exhibition. M. A. Patten's No. 46-205, scored 86 points, receiving a preliminary certificate. Full certificate of merit was awarded to seedling No. 100 from Joseph Heacock Co., Wyncote, Pa., which scored 86 points. Mr. Heacock has 1400 plants of this variety. It is a seedling of Lawson and Enchantress, the latter being the seed-bearing parent, and originated with Edwin Towell, Hillsdale, Pa., from whom Mr. Heacock purchased all the stock. The color is a clear rose pink; and we are informed the plant is a very free bloomer, and a strong

grower. This variety will be disseminated in the Spring of 1909.

Other seedlings securing certificates of merit were Wa-no-Ka, from the Wa-no-Ka Greenhouses, Barneveld, N. Y., which scored 86 points; and President Seelye, from H. W. Field, Northampton, Mass., scoring 89 points.

Among the seedlings shown some were not in fit condition to be judged, owing to circumstances over which the exhibitors had no control. The judges mentioned as such: Defiance, Mrs. Robert Hartshorne and Climax. The variety Apple Blossom, from the Wa-no-Ka Greenhouses, scored 84 points.

Miscellaneous Exhibits.

The miscellaneous exhibits, other than carnations, were mentioned by the judges as follows:

E. H. Kramer of Washington, D. C., showed some very fine blooms of Queen Beatrice rose, very tastefully arranged.

Two vases of Mrs. Jardine rose were on exhibition by

Charles McCauley, Exhibition Manager.

Robert Scott & Sons, Sharon Hill, Pa. The same were very fine, having a remarkable fragrance.

E. G. Hill & Co. of Richmond, Ind., showed a grand vase of Rhea Reid roses.

The new fern, *Nephrolepis superbissima*, was on exhibition by F. R. Pierson Co. of Tarrytown, N. Y., and in fine condition.

Wm. Sim of Cliftondale, Mass., exhibited three very fine vases of violets.

The Richmond carnation support was shown by the Eagle Machine Works, Richmond, Ind.

The Morched trap, in model, was exhibited by the manufacturers.

Several of the Lord & Burnham Company's specialties were shown.

The Judges' Awards

Class A—100 Blooms.

SEEDLINGS OR STANDARD SORTS.

White—First, Cottage Gardens Co., Queens, N. Y., with Alma Ward; second, F. R. Pierson Co., Tarrytown, N. Y., with White Enchantress.

Enchantress shade of pink—First, Chicago Carnation Co., with Enchantress; no second.

Lawson shade of pink—First, E. G. Hill & Co., Richmond, Ind., with Afterglow; second, Cottage Gardens Co., with Mrs. Tom Harvey.

Winsor shade of pink—First, Cottage Gardens Co., with Mrs. C. W. Ward; second, Chicago Carnation Co., with Winsor.

Scarlet—First, Cottage Gardens Co., with Beacon; second, John Reimels, Woodhaven, N. Y., with Seedling No. 32.

Crimson—First, Cottage Gardens Co., with Creole Beauty, second, John D. Cockeroff, Northport, L. I., with Harvard.

White Variegated, First, John Reimels with Variegated Lawson; no second.

Any other color.—First, H. Weber & Sons Co., Oakland, Md., with Toreador; second, John E. Haines with Imperial.

Class B—50 Blooms.

Open to all varieties disseminated prior to July 1, 1907.

Lady Bountiful—First, Stafford Flower Farms, Stafford, Pa.; no second.

White Perfection—First, F. R. Pierson Co.; second, S. J. Goddard.

Any other white.—First, F. R. Pierson Co. with White Enchantress; second, Stafford Flower Farms with Lieut. Peary.

Enchantress.—First, Chicago Carnation Co.; second, Stafford Flower Farms.

Any other Enchantress shade of pink.—First, F. R. Pierson Co. with Melody; second, Henry Eichholz with Mrs. W. T. Onwake.

Winsor.—First, Chicago Carnation Co.; second, Cottage Gardens Co.

Pink Enchantress.—First, F. R. Pierson Co.; second, Henry Rohrer, Lancaster, Pa.

Any other pink (this shade).—First, Chicago Carnation Co. with Welcome; second, Henry Weber & Sons Co. with Genevieve Lord.

Lawson.—First, Potter, Wilmington, Del.; no second.

Aristocrat.—First, Chicago Carnation Co.; second, R. Witterstaetter.

Pink Imperial.—First, John E. Haines, Bethlehem, Pa.; no second.

Robert Craig.—First, Henry Rohrer, Lancaster, Pa.; no second.

Red Chief.—First, F. R. Pierson Co.; no second.

Victory.—First, F. R. Pierson Co.; second, S. J. Goddard.

Beacon.—First, Cottage Gardens Co.; second, F. R. Pierson Co.

Any other scarlet.—First, Chicago Carnation Co. with Andrew Carnegie; second, John E. Haines with John E. Haines.

Mrs. M. A. Patten.—First, Cottage Gardens Co.; no second.

Imperial.—First, John E. Haines with Pink Imperial; no second.

Any other white variegated.—First, F. R. Pierson Co. with Variegated Lawson; no second.

Any other crimson.—First, Cottage Gardens Co. with Octoroon; no second.

The American Carnation Society's Medals.

CLASS C.—100 BLOOMS, ANY VARIETY, ANY COLOR.

Gold Medal.—Cottage Gardens Co. with Alma Ward.

Silver Medal.—R. Witterstaetter with Afterglow.

Bronze Medal.—Cottage Gardens Co. with Mrs. C. W. Ward.

Special Medals of the Society of American Florists.

CLASS D.—50 BLOOMS OF CARNATIONS NOT YET DISSEMINATED; THE VARIETY TO BE IN ALL CASES OF AMERICAN ORIGIN.

Silver Medal.—Cottage Gardens Co. with Alma Ward.

Bronze Medal.—R. Witterstaetter with Afterglow.

Preliminary Certificate.

White 46-205, exhibited by M. A. Patten, Tewksbury, Mass., 86 points.

Certificates of Merit Awarded.

Pink Seedling No. 100, exhibited by Joseph Heacock, Wyncote, Pa., 86 points.

Wa-no-Ka, exhibited by Wa-no-Ka Greenhouses, Barneveld, N. Y., 86 points.

President Seelye, exhibited by H. W. Field, Northampton, Mass., 89 points.

W. N. Rudd, Morgan Park, Ill., for white seedling, a fine commercial flower. Scored 86 points; also for flesh pink seedling; a very attractive bloom, the evenness of color being remarkable. Scored 89 points.

Special Prizes.

The Henry F. Michell Co. silver vase, valued at \$40, for the best 100 blooms of carnations in four varieties, twenty-five blooms to a variety (open to private gardeners only) was won by Wm. Kleinheinz, Ogontz, Pa.

Peter Bisset's prize of \$10 in gold for the best display of carnations grown by a private gardener, distinct from Michell's prize, was won by Wm. Kleinheinz, Ogontz, Pa.

Peter Fisher's prizes for the best fifty blooms of Beacon, first (\$12), was won by Cottage Gardens Co., Queens, N. Y.; second (\$8), was won by F. R. Pierson Co., Tarrytown, N. Y.; third (\$5), was won by Stafford Flower Farms, Stafford, Pa.

George H. Cooke's prize of \$10 in gold for the best 25 blooms pink seedling or sport darker than Enchantress and lighter than Lawson, never before winning a prize or medal. Those having preliminary certificate eligible. The above prize was won by Joseph Heacock, Wyncote, Pa., with Pink Seedling No. 100.

George C. Shaffer's prize of \$10 in gold for the best vase of 50 blooms, not more than three varieties, open only to growers having less than 20,000 feet of glass, was won by Henry Eichholz, Waynesboro, Pa.

S. C. Briggs' prize of \$10 in gold for the best vase of white carnations, 50 blooms, distinct from other entries, was won by Cottage Gardens Co. with Lieut. Peary.

John Robertson's prize of \$5 in cash for the best 25 blooms of Winsor, distinct from other entries, was won by Cottage Gardens Co. with Winsor.

J. J. Harty's silver cup to the exhibitor making the largest display, all vases in all classes being counted as part of this display, was won by the Chicago Carnation Co., Joliet, Ill.

Z. D. Blackstone's prize of \$10 in gold for the best 50 blooms of white carnations, distinct from other entries, was won by Chicago Carnation Co. with White Perfection.

C. A. Goldsmith, jeweler, prize of a cup or stein for the best 50 blooms of red, new or standard variety. Vases for this prize not to be entered in any other class. Red meaning Beacon, Victory or Craig shade of red. The above prize was taken by Cottage Gardens with Beacon.

W. J. Vonderheide silver cup for a vase of 100 blooms of the best carnation to be disseminated for 1908, was won by R. Witterstaetter with Afterglow.

January 29, Morning Session.

The meeting this morning opened at 10:30 o'clock and was largely attended. Dr. B. T. Galloway, Chief of the Bureau of Plant Industry, Department of Agriculture, Washington, D. C., talked on the subject of "Experiments in Carnation Growing by the Department." A summary of his remarks is given in another column.

Considerable discussion followed, the principal points brought out being that by force of circumstances the Department had to use horse manure, although cow manure would be preferred, if available, and doubtless would give equally satisfactory results. Dr. Galloway said that bone, which was a costly commercial fertilizer, had been found to be injurious to certain plants. Asked in regard to the use of hardwood ashes, the doctor said this was not a commercial fertilizer, but more of a natural manure, and when used with caution in certain soils, could be recommended. Potash was better than hardwood ashes in giving a stiff stem and a flower that would stand up longer.

As regards soil, in answer to a question by Peter Fisher, Dr. Galloway said the Department soil was somewhat stiff, containing from 15 to 25 per cent. clay. There was a great deal more in the gray matter of the man handling the plants than in the question of soil.

It should be understood that by obtaining a soil as nearly as possible adapted to the needs of certain plants, the grower would be relieved of a great deal of detail. Sandy soils are apt to give a shorter growth and a shorter stem to the plant than heavier soils; the former do not contain as much moisture. Light sandy soils are more improved by the use of a fertilizer, like bone, than are clay soils; and a greater injury from an excessive use of bone to the latter would be likely to result than from its application to sandy soil.

The Department uses from 4 to 5 inches of soil, planting in the beds from the first to the tenth of April. It was necessary to get the space for other kinds of stock. Commercial growers, in order to plant out in the field in June or later, could carry the young stock in 3½-inch pots till that time.

Professor Galloway, in reply to a question, said he would prefer to use sheep manure in a liquid form, in which state it was a pretty good thing. He did not consider steaming the soil of any advantage, because in that process desirable manurial properties were thereby destroyed.

In answer to President Lemon as to the use of Bordeaux mixture with soap added, in interfering with propagation by cuttings, Dr. Galloway said he had no experience along that line. The use of a perfectly neutral soap could not in any way injure the cuticle of the foliage. Such a soap is effective as an insecticide. Ivory soap, about half a cake, dissolved in a gallon of hot water, added to about 20 gallons of Bordeaux mixture, sprayed in solution over the foliage, was more effective than Bordeaux mixture alone. Castile soap was an effective remedy against red spider, and is not injurious to the plants. It also does not discolor the flowers of either roses or carnations.

In the case of neutral soap against red spider, Dr. Galloway said that Ivory soap could be shaved by either a hand plane or a knife, then dissolved in a gallon of boiling water, to which could be added about four gallons of warm water, making a five-gallon solution, costing about five cents. This could be applied by a small hand force pump through about 15 or 20 feet of one-inch hose, through a Vermorel nozzle. This would cover the foliage entirely, and was death to old and young red spider, also killing the eggs. It could be applied every ten days. This had been found effective against red spider on cuttings. Of course, the pest could be held in check by the forceful use of clear water alone; but the spray recommended was more satisfactory, and the plants could be syringed with clear water in an hour or an hour and a half afterward. Syringing was not done for the purpose of removing anything that would be supposed to be injurious to the plant, but to wash off dead and dying insects. Once they are forced to the ground the pests do not seem able to get back on the plants. Hydrocyanic acid gas will not eradicate red spider; they revive from its effects in a short time. The solution, coming in contact with the body, draws from it the oxygen therein, with which the insect seems to be well furnished, closing also the external orifices, thus rendering the insects unable to breathe. A fine cut cake of neutral soap was all that was necessary to make the solution.

In replying to a question by William Swayne, Dr. Galloway said he had never used sterilized soil in carnation growing, but had done so in the case of other plants with beneficial results. For instance, with violets, sterilized soil had given a large vegetative growth but few flowers. This kind of soil had a tendency to bring about a large production of leaves and a lack of blooms. The experiment had not been carried to a finish, but it seemed as if sterilized soil had some connection with the presence or absence of nematodes on the roots. When the soil was sterilized there were no nematodes and the reverse was the case with soil not so treated. As a good remedy for the nematodes the professor recommended hard freezing of the soil in winter.

A hearty vote of thanks was tendered the doctor for his interesting and instructive remarks.

Next Meeting Place.

There was a good deal of enthusiasm displayed in the selection of the next meeting place. Pittsburg and Indianapolis each had its advocates, and when the votes were counted by the tellers—A. P. J. Baur and Fred

Burki—it was found that 83 votes had been cast for each of the cities. The matter was finally decided by the Pittsburgers, through Mr. Craft, of Monongahela, Pa., moving for unanimous selection of

Indianapolis in 1909.

The motion passed with acclaim. Pittsburg expects the convention in 1910, and will likely get it.

Quite a discussion ensued on the make-up of Class I; in the premium list, wherein several individual varieties are specified, a desire being expressed by some to adopt the same plan as in Class A, where the color classification only is employed. On motion of Mr. Rudd, the matter was referred to the board of directors with the suggestion that Class B, as specified in the present year's list, be repeated with such variation as the directors may deem best in the circumstances.

President Lemon announced that the delegates would be received by President Roosevelt at the White House on Thursday at 2:30 p. m.

The meeting then adjourned.

Evening Session, 8 P. M.

At the opening of this session, and after the secretary had read some supplementary reports, Mr. S. S. Skidelsky read his paper on "What the Grower Should Expect from the Introducer of a New Novelty"; this very interesting essay appears in another column. It was discussed by Messrs. Burki, Pierson, Rudd and others. Mr. Burki thought that introducers should not be held responsible for the behavior of novelties after leaving the place of origin. He condemned high pressure propagation and urged dissemination of well-rooted, healthy cuttings. Mr. Pierson recommended thorough test before dissemination and greater attention to the productive qualities of novelties in reference to their suitability as fancy exhibition sorts. He favored indoor culture and spoke of the general good quality of the new introductions. Mr. Rudd caused some merriment by repeating the statement of a large buyer that he expected nothing of the introducer, and another remark by one originator that his greatest expectations were for buyers to pay their bills. The introducer of a novelty who does not belong to the Carnation Society, and does not exhibit at their annual meetings for critical inspection, should expect nothing from the buyer. The latter should, however, get a fair deal, but should not himself overpropagate the cuttings he purchases. He did not believe there was any intention on the part of the introducer to deliberately swindle the buyer, and he condemned the practice of originators who should know better than to send out inferior sorts. A certain percentage of cuttings will be defective under the most favorable circumstances; this should be figured in with the loss.

Mr. Washburn of Chicago recommended that the society should keep a record of novelties from the date of origin to introduction by means of visits of inspection and the distribution of reports to members, who should be taxed for this information at the rate of \$1 per 1000 plants purchased.

Mr. Pierson thought that too pessimistic a view of the situation was being taken; the past ten years had shown wonderful progress; the failures had been exaggerated and not sufficient thought given to the successes.

A paper by Irving Gingrich, South Bend, Ind., entitled "Cultural Methods for Carnations," was then read by J. H. Dunlop. This paper appears on page 152.

W. N. Rudd called attention to the forthcoming national flower show at Chicago, and asked the co-operation of the Carnation Society in looking after carnation interests at that exhibition. The Horticultural Society of Chicago offers \$500 in medals and has gone on the guarantee list for \$1000. The total premiums for this exhibition are now over \$12,000.

W. F. Kasting, of Buffalo, said the show would be held in Chicago from November 5 to 15, 1908. The amount now guaranteed was \$12,500. He urged carnation growers to make exhibits and asked the society to nominate judges for the carnation classes there.

On motion of Mr. Pailledouze, the society voted to offer its gold, silver and bronze medals for the Chicago exhibition. Mr. C. W. Ward undertook to defray the expense if the society funds would not allow of these donations.

A vote was passed to change the Lawson medals to those of the American Carnation Society; also, that the society's regular judges act officially at the National Show.

The flowers on exhibition were given to the public on Wednesday night.

Thursday, January 30.

At the morning session the election of officers was held, with the following results:

President—M. A. Patten, Tewksbury, Mass.
Vice-President—A. P. J. Baur, Indianapolis, Ind.
Secretary—Albert M. Herr, Lancaster, Pa.
Treasurer—Fred Dorner, Jr., Lafayette, Ind.
Director—James S. Wilson, Western Springs, Ill.
Judges—Peter Fisher, Ellis, Mass.; William Nicholson, Framingham, Mass.

The committee on the president's address recommended that medals be collected on a separate class in Class A, instead of for separate competition. The motion was lost and the method of awards stands as at present constituted. This committee also recommended that no member of the society shall be charged any fee for certificate entries, nor for registration, but that all others be charged fees, as at present, the same to be collected in advance.

Also, that no variety be eligible for any competition unless it has been registered in proper form. Regular blanks, signed by applicants for registration, to be adopted which shall give name, parentage, date of first bloom, and a full description of the plant and flower. The term "large" and so forth to be stricken out and the actual diameter in inches shall be specified, and all superlative and laudatory adjectives be stricken out and the description confined to facts instead of to opinions. A committee also recommended that whenever a variety shall manifest superiority commercially and maintain such superiority for three or more years, the directors may recommend that the originator be given a special gold medal, to be called the "Medal of Merit." The committee has especially in mind the varieties Daybreak, Wm. Scott and Enchantress as examples; this award to be an evidence of true and established commercial value and not of mere prize-winning capacity.

A motion by Robert Craig that a separate and distinct name be given all sports instead of such designations as White Lawson, etc., was lost.

A motion that membership in the society be restricted to individuals, debarring firms, corporations or combination titles, was adopted.

A committee on final resolutions was appointed, consisting of Messrs. M. A. Patten, Wm. P. Craig and A. J. Baur. This closed the morning session. A later session was to open after the reception of the delegates by President Roosevelt, which would be devoted to the papers of Messrs. Ward and Norton, this being a joint meeting with the American Breeders' Association.

In the afternoon the delegates were received at the White House by President Roosevelt, who was at that time presented with a vase of carnations which were selected from the best of the displays exhibited.

Banquet.

On Thursday evening a banquet was tendered the delegates of the American Carnation Society and their ladies by the Florists' Club of Washington, at Raucher's Hotel. President Bisset, of the local club, presided. The menu was very much enjoyed and the list of toasts was as follows:

Our Country and President—Hon. Wm. E. Andrews, Auditor U. S. Treasury, Washington, D. C.
The American Carnation Society—President Fred Lemon, Richmond, Ind.
Washington: Our Capital—Hon. Robert N. Harper, President Washington Chamber of Commerce.
Agricultural Department—Prof. David G. Fairchild, Washington, D. C.
Horticulture—Robert Craig, Philadelphia, Pa.
The Horticultural Press—Wm. J. Stewart, Boston, Mass.
Our Guests—Wm. F. Gude, Washington, D. C.
The Ladies—Jos. R. Freeman, Washington, D. C.

American Breeders' Association.

The American Breeders' Association opened a three-day meeting on Tuesday, January 28, 1908, in the National Rifle Armory, Washington, D. C. The Hon. James Wilson, Secretary of Agriculture, who is chairman of the Association, was suffering from an attack of the grip, and was on that account unable to attend. Secretary Hays opened the proceedings. Charles Willis Ward, Queens, N. Y., was unanimously elected vice-president, succeeding the Hon. L. H. Kerriek, Bloomington, Ill., and took the chair.

An interesting address on Animal and Plant Introduction was read by David G. Fairchild of the Department of Agriculture, in which he advocated the establishment of ports of quarantine, fully equipped by competent scientists, where a thorough inspection could be made of all imported plants and animals. This inspection should be under the supervision of the government, which should be asked to appropriate the funds necessary to the carrying out of the work. The cost to the country, through the depredations of diseases and parasites on imported plants and animals, annually amounted to millions of dollars, and Mr. Fairchild thought much of this loss could be saved by the establishment of quarantine stations. His views were endorsed by Dr. Webber of Cornell and others, and the matter was left to a committee to formulate proper resolutions on the subject for presentation to the government authorities.

The joint meeting on Wednesday afternoon, under the auspices of the American Breeders' Association, was presided over by Mr. C. W. Ward. The following were among the papers presented: "Original Work among Native Roses," by W. Van Fleet, Little Silver, N. J.; "Report of Committee on Breeding Roses," by Peter Bisset, Washington, D. C.; "Development of the Humane or Resistant Character in Plants," by H. L. Boby, Fargo, N. D.; "Report of Committee on Breeding Carnations," by C. W. Ward, Queens, N. Y.

Experiments in Carnation Growing by the United States Department of Agriculture.

Dr. Beverly T. Galloway, Chief of the Bureau of Plant Industry, in his address before the Society called attention to the experiments and tests of various kinds connected with the growing of carnations which have been carried on by the Department of Agriculture for several years. He stated that the work had for its object the securing of information on the following points:

1. The relative yield and vigor of plants grown under glass all Summer as compared with plants of the same variety grown out-of-doors during the Summer season and moved to the benches in the usual way and at the usual time.
2. Fertilizer tests to determine the value of different fertilizers alone and in various combinations on vigor and yield.
3. A study of hereditary tendencies in so far as same may affect continuous vigor and healthfulness and yield.
4. The securing of new and desirable types by crossing.
5. A study of fundamental questions of breeding with a view to securing data that will be of value to carnation growers and others in the improvement of their crops.
6. A study of diseases and means of preventing the same.

Dr. Galloway took up the subjects in the order given, using a table or chart, large enough to be seen by all present, to illustrate the results of experiments conducted during the Summer of 1906 and the Winter of 1907, to determine the relative yield of field and indoor-grown plants. He explained how the experiment had been conducted, namely, that plants were propagated from stock of four varieties, care being taken to have the stock of as nearly equal vigor and productiveness as possible. Four benches in the greenhouse were given over to the work, each holding about 1000 plants, and the same were planted with stock from 3-inch pots, two rows the entire length of each bench being reserved for the plants grown out-of-doors. Dr. Galloway stated that the field grown plants were given the usual treatment and produced fair average growth, but were not as large as those grown on the benches when brought in in September.

He stated that the results, as shown by the chart, were, without exception, very much in favor of the indoor grown plants, in many cases the increase being over 100 per cent. He added, however, that while the results were so strikingly in favor of growing plants under glass the season through, from the standpoint of the Department, other considerations have to be kept in mind, such as the relative cost of the two methods, the production for an entire season, the utilization of the houses for other purposes, maintenance, etc., in determining which method to pursue.

The speaker also used the chart to illustrate his remarks upon the fertilizer experiments which the Department had carried on. He said that this experiment had been planned to bring out, if possible, the fact that growers as a rule are too prone to count on the value of commercial fertilizers in crop production, and he said he believed the results of the experiments would show that there is no fertilizer so good, reliable and sure as well decomposed organic manure—something which could be

secured anywhere in the country. He said, however, that experiments of this kind, to be conclusive, must be carried on for a number of years in various places. He cautioned the growers to go slow on commercial fertilizers and to put their faith and work into good composts.

He explained the work the Department had been doing in its study of hereditary tendencies in plants in so far as same may affect continuous vigor, healthfulness and yield. He said the question of whether there is true bud variation was still an open one, but that at the same time he did not think the importance and value of careful and rigid selection of stock could be questioned. This the Department has been doing and he stated it was his intention to continue this selective work for several years until the effects could be fully demonstrated.

The speaker mentioned the work the Department had been doing in the production of new types by crossing and referred to some of the crosses that might be seen in the greenhouses.

He said that Professor Norton, whose talk was to follow his, would explain in detail the fifth line of work, namely, a study of fundamental questions of breeding, which work he stated had been carried on by Professor Norton before leaving the Department.

Dr. Galloway now took up the sixth line of work that the Department had been conducting, namely, an investigation of the diseases of carnations. Among the diseases studied was the wet stem rot, due to Rhizoctonia, which he stated continues to be one of the most serious diseases with which the growers have to contend, but that it could be controlled by growing the plants in well drained and well aerated soil containing plenty of lime, and by avoiding mechanical injury to the plants. He also mentioned the dry stem rot, a disease caused by Fusarium—one of the wilt fungi, and stated that the only remedy for this disease was to use sterilized soil and the liberal use of acid phosphate.

Two other diseases to which attention was called were the Macrosporium spot, which he said could be prevented by spraying with Bordeaux mixture, and the bacterial spot, a disease occurring only in wet seasons on the softer-leaved varieties. This disease he stated might be controlled by light syringing with a mixture of two parts commercial formaldehyde to 1000 parts water.

Dr. Galloway closed his remarks by assuring the Society that the Department was always at their service and with an invitation to its members to visit the Department greenhouses.

What the Grower Should Expect from the Introducer of a New Variety.

By S. S. SKIBELSKY, Philadelphia.

It would be hard to find in the history of floriculture another instance of the rapid strides and development of a flower to equal that of the carnation. The divine flower has indeed sprung into favor as if by magic wand. Unlike the short-lived chrysanthemum, or the queen herself—the rose—the carnation is pre-eminently the flower of the masses. It is grown everywhere, it is sold everywhere; the "curb merchant" no less than the "society florist" handling it in immense quantities.

More glass is going up, more carnations are being grown, and the demand continually is for still more. Nor is its popularity confined to our own borders. England, Germany and France depend upon our varieties; far-away Norway and Sweden grow them with success, and even darkest Russia, we are told, can do Mrs. T. W. Lawson, Enchantress and White Perfection well. Let us hope—and you will pardon my slight digression from the subject—that with the advent of Beacon there may come a light to brighten the hovels of the semi-civilized, wretched peasantry in the Czar's domain.

John Thorpe's Ideal Reached.

When John Thorpe, but a comparatively short time ago, predicted that our puny carnation of yesterday would attain the respectable size, by actual measurement, of four inches in diameter, there are many among us to-day who were inclined at the time to treat such prophecy with a four-inch grain of salt. That prediction of Mr. Thorpe's has come true nevertheless. We have practically reached the goal of our ambition. The four-inch carnation is here, and has evidently come to stay. Nor are we content to rest upon the laurels achieved. We are aiming higher and still higher. What was good enough a season or two ago does not satisfy us to-day. We must have something better. It won't do to stay the march of progress or to check the course of evolution. Aside from the size of the bloom itself, we must have also stem—a long and stiff one at that. We must have a carnation with a non-bursting calyx, of good color, good keeping qualities and last, but by no means least, we insist on varieties that will produce the flowers and yield us dollars and cents—"bread and butter" carnations, if I may borrow the stereotyped description now and then applied to varieties which do not pay for the bread, let alone the butter. It is not my intention, however, to point out any particular varieties, nor do I wish to call to the bar of the grower's opinion any of the introducers of the "bread and butter" sorts—the kinds that never paid for either the bread or the butter.

Introducers Honest and Honorable.

I am rather inclined to the belief that the average introducer of a new seedling is honest and honorable, that he means well, that his sole aim and object in introducing a carnation is to give satisfaction, that under all circumstances he aims to give the grower his money's worth. There have been some exceptions, of course, but this is another story, having no bearing upon the subject under consideration.

Why Worthless Sorts Are Introduced.

Granted then, that no fraud or deception on the part of the introducer is ever intended, the question arises, Why are worthless varieties thrown upon the market? Why indeed?

I shall attempt to answer this question, as I have studied it at close range, depending upon my personal impressions and observations, which, of course, are in no wise infallible. My observations upon numerous occasions lead me to the conclusion that there are some hybridizers who are inclined to be too optimistic, often being carried away, so to speak, by the momentum of their own enthusiasm. The man thus inclined makes his cross, selecting for the purpose sturdy and meritorious parents. The result, he takes it for granted, must be highly satisfactory. I say "he takes it for granted" advisedly, because taking things for granted is a characteristic trait of the enthusiast. He watches the seed pod with all the care, hope and love which a young mother bestows upon her first born. To be sure, he reasons something good must result. A chip off the old block is an asset not to be despised. In course of time the seedling or seedlings appear. Out of a dozen or more "uncertainties" the one looking the most promising is selected and duly labeled. No sooner does the bloom break through the calyx than the plant is chopped down, literally hacked to pieces, in order to get all the cuttings, good, bad and indifferent, that it may yield through and beyond the season. The vitality of the "promising one" is thus impaired at the very outset of its ephemeral career. The season following it still looks promising, although the calyx is somewhat inclined to go asunder, nor is the stem strong enough to sustain the weight of the bloom or the bunch of petals. The season, of course, which happened to be either too dry or too wet, is accountable for that. Perhaps a little overfeeding did the mischief, maybe a degree or two below or above the temperature required to suit its delicate constitution. To be sure, there are numerous reasons for its misbehavior, but no matter, where there is life there is hope. A second massacre is

in order and the plants are propagated to the limit. Cuttings are taken regardless of their condition. It won't do to "put off" when the growers are so much in need of a good white, a good red or a good pink, and, incidentally, when there is a fortune in sight.

The Grower's Expectations.

The question what the grower should expect from the introducer of a new carnation is rather a perplexing one and is not so easily answered as one might expect. Our ideas of the fitness of things are so much at variance with local conditions and local requirements that it would be practically impossible to set up a standard with a view of insuring general satisfaction.

In one of the November issues of Horticulture John Thorpe, in his notes on the Chicago flower show, has this to say about the carnations which were on exhibition there. "Of new carnations in quantity very short, in quality never better. Rausers of seedlings are getting wise. It is not how many, but how few. Let this prevail, because the few have the best chance." Tersely expressed, but true. That the few of superior quality have the best chance is not to be denied. Yet, on the other hand, we must also not ignore the fact that while there are comparatively few growers ever in quest of "fancies" or carnations of quality whose products are sure to command the highest prices at all times—there are hundreds and thousands of others who are ever on the lookout for "the bread and butter sorts," whose local markets, either wholesale or retail, do not warrant heavy investments in "fancies," who in brief, must have carnations which, taking local conditions into consideration, will pay for the coal, the help, the interest on the greenhouse plant, and will leave a dollar to boot. It is the rank and file that is to be considered, the man who can no longer grow Mrs. Lawson or Queen, who is in want of something to take their places. A standard, therefore, to suit alike the successful growers in the vicinity of New York or Chicago and the man in the Dakotas is not to be thought of.

But what, after all, is the grower to expect from the introducer of new seedling carnations?

Coming to the point by the shortest possible route it begins to dawn upon me that there ought to be a sort of happy middle ground upon which both the grower and the hybridizer could meet for the purpose of advancing their mutual interests, for the purpose of adjusting differences, or overcoming prejudices and of facing conditions. If the one realizes the need of the other, in other words, if the introducer of seedling carnations will exercise the most scrupulous care in behalf of the "goose that lays the golden egg" and the grower in his turn will bear in mind that his very success, or the "golden egg" has been made possible by the men who have made hybridization their life study, who are sacrificing their time and their means in order to improve upon past achievements and thereby advance the interests of the carnation growers, if both, I say, could meet upon such ground, there surely would be no cause for disappointment or dissatisfaction. But how is this to be accomplished? Leaving the hybridizer's cause in the hands of Mr. Rudd, who, I am sure, will do ample justice to it, I will take up the grower's end of the question and will briefly outline his expectations from the introducers of new seedlings.

First.—The grower expects his money's worth. By this I mean that when he orders a batch of high-priced cuttings he expects and is fully entitled to high grade stock, cuttings that have been carefully selected and well rooted, rooted not by dint of the steam pipe at so many thousands per week, but by the natural process of keeping the feet comfortably warm and the hands cool, to insure vigor and health.

Second.—He expects from the variety just what it is represented to be. In other words, when a variety is a cropper it should not be represented as a continuous bloomer, that when its calyx splits at certain seasons or under certain conditions that fact should be brought to the surface regardless of losses or gains.

Third.—He expects the benefit of the introducer's experience without paying an additional price, often a heavy one, for the experience himself. By this I mean that when a seedling has been thoroughly tested and its requirements and peculiarities studied and recorded, the introducer is morally obliged to give the grower the benefit of his own knowledge and experience. The grower is entitled to such information and it should not be withheld from him. A printed slip bearing all the cultural notes about the variety introduced should accompany each and every shipment. And

Fourth.—The grower expects a "square deal." By this I mean that no carnation, no matter what its previous record, no matter how many points it scored or how many medals were awarded it, unless it maintains its record in all its essentials up to the time and including the season of its dissemination, unless its vigor in nowise impaired, should see the light of day. The introducer must be absolutely certain on this point he must take nothing for granted, else the grower is sure to be a very much disappointed man.

The grower's expectations, it seems to me, are within the bounds of reason and need hardly be dwelt upon at greater length here. Let a condition of a thorough understanding and most scrupulous honesty on both sides prevail and we will no longer hear about "gold bricks" and "suckers."

After all, there is a deal of truth in the old saw of honesty being the best policy. The most successful business men of to-day are those who pursue such a policy, whether it be in the dissemination of seedling carnations or breadstuffs. The child that burns its fingers fears the fire, so does the grower steer clear of the man who sells him a "winner" and gives him a "gold brick" instead. It is to our own interest, whether we be hybridizers, dealers or mere agents, to discourage worthless varieties; stamp them out, root, branch and all, if we wish to see the most important branch of our business thrive and develop without hitch or hindrance.

Carnation Breeding.

BY RICHARD WITTERSTAETTER, CINCINNATI, O.

Some sixteen years ago, when I first undertook the work of hybridizing the carnation, I had very little knowledge of Nature's law regarding the results to be expected from crossing the standard commercial varieties of that date, and concluded that experiments with a complete record of the parentage and the results were necessary as regards color, size, stem, form, habit, freedom, etc. I found, while we had some very good seedlings, that pointed up well in everything except color—which is a very important factor in a commercial carnation—that we got quite a few variegated, purples, and off colors, and very few identical to the parent color. I therefore concluded that it must be Nature's law in plant life, the same as in the human race, that blood would tell; and future breeding has been carried on with that point in view; namely, scarlets in a race by themselves, whites in theirs, and so on; always selecting for future work that which came nearest to an ideal as to color and commercial value.

Some have held that by following this method you lose constitution. We have proven this to our own satisfaction to be untrue, if a selection of vigorous parents is made for the work. This opinion may have arisen from the fact that a very brilliant scarlet has no vigor to back it up—our most vigorous scarlets being only a fair or dull red; and if a good constitution and a brilliant color are combined, the result is apt to be a slow and shy bloomer, not up to the commercial requirements. As most of my endeavors have been devoted to the scarlet race, amounting to about one-third of the number of seedlings raised, I have taken the pessimistic view that it would be an impossibility to produce a brilliant scarlet of free blooming quality backed up by a vigorous constitution. Of late years, however, I have observed that this will not be an impossibility.

In breeding for form we have always selected those that have reproduced themselves in that point for two or three generations, from one or the other of the parents; preferably the seed parent, and using the same as a seed parent.

In pink we do not hold so closely to the color line, but are very particular that whatever color is used is one of good, clear, strong and lively tone, not subject to fading into dull colors, or easily affected by the sun.

In breeding for size, we do not hesitate to use a small flowered variety as a seed parent, provided its progenitors of the first and second generations past were large flowered sorts; as a pollen parent likewise, if it has all the other attributes of a good commercial variety.

In breeding for stem and calyx, I like to select a variety that has inherited these good points from one or two past generations, with the bloom bordering on the semi-double, or not too many petals, to insure a good setting of seeds; also guarding against parents with flowers containing too many petals, as the result will be too many extremely double flowers with no calyx to speak of.

Constitution, next to color, is the most important factor of a commercial carnation, from a grower's point of view, and should be given the utmost consideration. The parents should be selected and bred to such varieties

as are noted for their growth and vigor. The grower, we believe, is entitled to give the best plants, and crossing should be done during the months of March and April when plants are making their most vigorous and rapid growth, meaning well-developed and ripened seed.

We sometimes question whether the condition and class of food with which we supply the mother plant at crossing and up to the time of ripening the seeds, is not responsible to some extent for our failures or successes, as the case may be.

Regarding any other points on hybridization, I might suggest a strong, well-rooted love for the work, uniring patience and perseverance, with a studious observation of the results, and a fair sized bank account at your disposal until your aim has been attained.

The American Rose Society.

Additional Prize Offers.

There is offered a silver cup, valued at \$25, by H. F.
Michell Co., seedsmen, Philadelphia, Pa., for 50 blooms
of Kate Moulton rose.

F. R. Pierson Co., Tarrytown, N. Y., offers a silver cup,
valued at \$25, for the best new rose not in commerce,
nor yet exhibited before the American Rose Society.

There has been mailed to every florist or grower
located in Chicago, a copy of the schedule for the annual
exhibition.

August Poehlmann, Morton Grove, Ill., has been ap-
pointed chief of the executive committee to represent the
American Rose Society on the spot.

Any entries, prizes or other matters of interest should
be forwarded to the secretary of the Society.

Fishkill-on-Hudson, N. Y. BENJAMIN HAMMOND.

American Nursery Company.

In the Nursery Department of this week's issue will
be found an interesting notice of a new incorporation.
This comprises the amalgamation of three separate and
established nurseries, with Fred'k W. Kelsey, of New
York, as president; Theodore Foulk, of Flushing, N.
Y., as vice-president, and William Fomer, of Spring-
field, N. J., as vice-president and treasurer. All the
officers of this new incorporation are well and favorably
known in business circles and, without doubt, this new
association will have a leading effect on the nursery
business locally as well as nationally.

THE AMERICAN BREEDERS' ASSOCIATION is planning
the publication of a periodical to be entitled, prob-
ably, the "American Breeders' Magazine," which
will be sent to all members of the association, and
which will contain the most up-to-date, interesting
and practical material bearing on the improve-
ment of animals and plants by breeding. It will be
an entirely public enterprise devoted to breeding
interests, none of the officers having any present
or prospective money interest in the venture.

Marcellus A. Patten.

Marcellus A. Patten, president-elect of the Ameri-
can Carnation Society, was born in Lowell, Mass., in
1849, and attended the grammar and high schools of
his native town. He chose the calling of a florist
and worked for some time with William H.
Spooner, Brighton, Mass., and Wieland Brothers,
Cambridge, Mass. He started in business on his
own account at Lowell, and remained there for
some time, removing about twenty years ago, to
Tewksbury, Mass., where he now operates a green-
house plant of considerable size under the firm
name of Patten & Company, in which he is assisted
by his son, Wilbur F.

President-Elect, M. A. Patten

Mr. Patten has always been interested in carnations and has originated several good seedlings, one of the best known of which is a variegated sort named Mikado. He is a frequent and successful exhibitor at the shows of the Massachusetts Horticultural Society and the American Carnation Society.

The president-elect is much esteemed in his locality. He was vice-president of the Gardeners and Florists' Club of Boston in 1906. He is an earnest worker along progressive lines, and the American Carnation Society is to be congratulated on its excellent selection of a presiding officer for 1909.

A. F. J. Baur, Vice-President-Elect

Vice-President-Elect A. F. J. Baur.

A. F. J. Baur, Indianapolis, Ind., the newly elected vice-president of the American Carnation Society, was born at Pittsburg, Pa., on January 9, 1876. At the age of thirteen he entered the employ of F. Morat's Sons, florists, Louisville, Ky., leaving there after two years' service, to enter the employment of E. G. Hill, Richmond, Ind. Here he remained five years, taking especial interest in carnations and exhibition chrysanthemums. He then spent two and a half years in other commercial establishments to round out his general horticultural training. In 1899 he started in business with F. S. Smith at Indianapolis, under the firm name of Baur & Smith, in which he is still engaged.

Mr. Baur has made a specialty of raising new carnations and has originated several worthy novelties. He is a contributor on the subject of carnation culture to the trade press. Mr. Baur is a hustling gentleman, and will be a tower of strength in connection with the meeting in his home town next year.

S. A. F. Registration Matters.

Editor Florists' Exchange:

I am glad the hydrangea registration incident is closed so far as you, and I hope all others, are concerned. Give us instead a little more of Job, Esler and company.

While registration was more or less of a farce under the regime of the ex-secretary of the S. A. F. O. H., I do not believe any blame rests upon him in the hydrangea case in question; he accepted in good faith the request to register the old plant under what I believe is a new name. But he has been fooled before. See page 162 of the 1903 report of the national society where is registered "Zonal Geranium Double Dryden (Eichholz)"; and page 181 of the 1906 S. A. F. report, where is registered "Zonal Pelargonium Double Dryden (Hill)." Now the question arises: What is a zonal pelargonium and what is a zonal geranium? Let the authorities speak.

REGISTRATION.

[The "Zonal Pelargonium Double Dryden" is not included among the plants registered, but among those introduced in the year to which the report in question refers.—Ed. F. E.]

Simon Held, Sr.

Simon Held, Sr., aged 79, a well-known gardener of Pittsburg, Pa., for many years, died January 19, 1908, of la grippe, at the Home for the Aged at Fair Oaks, where he had been living for several years. He was born in Westphalia, Germany, and went to Pittsburg 25 years ago, engaging in gardening. Owing to his failing health he was compelled finally to go to the home at Fair Oaks. He was a member of the Smithfield street German Evangelical Church. He leaves a widow, two sons and three daughters.

Gustave Wittbold

Gustave Wittbold, of the Geo. Wittbold Company, Chicago, died at his home in Chicago on Friday, January 24, of pneumonia, after an illness of only nine days. Mr. Wittbold was born July 11, 1871, in Chicago, and received his education in the local schools. At an early age he joined his brother Henry in the management of the latter's retail florist's business at 512 North Clark street. When this store was consolidated with the old established store of George Wittbold, the father, on Buckingham place, at the time of the formation of the Geo. Wittbold Co., the deceased assumed the management of the retail departments of both stores, which position he held at the time of his death. Mr. Wittbold was of a very retiring disposition, his entire time being divided between his business and his home. He belonged to no social or other organizations, being quite satisfied to enjoy a simple and happy home life to the extent of his leisure. Personally he was well-liked and respected by all who knew him. The funeral was held on Monday, January 27, and interment was made at Graceland cemetery, the services being held in the chapel there. He leaves a widow, and two little sons, the elder seven years, and the younger eight months. He was one of five brothers, all connected with the business, and the brothers, with their father, feel keenly their loss.

The late J. F. Noll, to whom we referred in our obituary column last week, was born at Myerstown, Pa., and not at Morristown, Pa., as there stated. At the time of his death he was a member of Kane Lodge F. and A. M., and also of the Royal Arcanum.

Winner of the Bronze Medal of the A. C. S. Growers, Cottage Gardens Co.

AMONG THE GROWERS

John Marshall, Newport, R. I.

A look in at John Marshall's greenhouses the other day found him absorbed in the work of grafting Marechal Niel roses on multiflora stocks; there seemed to be about fifty in the frame where the grafting was then done. In another frame in the same house there were to all appearances a like number of grafted plants which had been done about six weeks ago; every one, or I should say, every cion and stock had united successfully and growth was proceeding. A few years ago Mr. Marshall had a large number of Marechal Niel in bloom in pots at Easter, for which he found a ready sale.

The carnations here looked healthy and gave promise of large cuts in the near future; several seedlings of Mr. Marshall's raising are grown and carefully watched. He is the kind of man who never jumps at hasty conclusions even when his own carnation seedlings are concerned. He grows a limited number of Winsor and his opinion of that variety is about as limited, relatively, as the number of plants.

Roses happened to be a little off crop when I was there, otherwise they looked in very fit condition.

A very profitable item Mr. Marshall has found in a

batch numbering five or six hundred *Cypripedium insigne*, the flowers of which sold readily at not less than ten cents each. The nature of some of the building, still standing on this place makes it necessary to grow many kinds of plants and other products in order to make the whole pay. For instance, there is one house in such a condition and so constructed that it is with difficulty the temperature can be held higher than 40 degrees in very cold weather; that house will be utilized later for bedding plants when potted up. Another large house will be planted with tomatoes for the Summer market in Newport, still another may be devoted to melons for the same market.

A large number of very thrifty young gardenia plants filled three or four frames in a lean-to house; a certain proportion of the lot will be in a week or so planted in benches for Summer flowers, the remainder being offered for sale to others having the same end in view.

Mr. Marshall has not found a good demand for *Primula sinensis* this Winter; the character of the stock could not be the cause. *Primula kewensis* is grown here in limited numbers, also; as a seller it has not been anything to brag about. D. M.

Orchid Culture In Chicago.

George Reinberg of Chicago may justly claim the honor of being, from a commercial standpoint, the pioneer orchid grower of the West. A house, 265 by 25 feet, was erected last year for orchid growing, and the first stock arrived about the middle of April, some 1,500 plants, nearly all cattleyas. The plants were of the grade known as "established," that is, ready for flowering. Through careless handling on the part of the railroad this initial shipment was badly injured by frost, and a loss amounting to fully two-thirds of the shipment has resulted, the portion saved being now in process of recovery. Other shipments followed, until today there is a stock of about 4,000 plants in the house, including *Cattleyas labiata*, *Triana*, *Mossiae*, *Schroderae*, *Persevaliana*, *Mendelii*, and *Gaskelliana*; *Dendrobium formosum*, *gigantum*, *Phalenopsis* and *Wardianum*, and *Oncidium varicosum* Rogersii.

An excellent cut has been obtained from the house during late Summer and Fall, but at the present time few flowers are in evidence. *Cattleya Schroderae*, however, looks very promising for an excellent crop at Easter, and early flowers will be taken long before that season. A few *dendrobiums* are still being cut.

The accompanying illustration shows the method of growing cattleyas adopted at the Reinberg establishment and with excellent satisfaction. Stages of cypress are built in triangular form, the sides much steeper than the slope of the glass roof; these stages are latticed substantially, and the plants affixed to the latticing, with pent for roofing material. Excellent drainage and aeration is thus afforded. Forming the base of the triangle on each stage is a bench holding a supply of moss, which becoming water soaked, supplies plenty of moisture. Ventilation is obtained from overhead ventilators, but side ventilators are soon to be added. At present there is considerable space between plants, but new stock is continually arriving, and easily accommodated. The house is heated by steam from the heating system of the range of houses, end mains of 2½ inch pipe, with leads of 1¼ inch pipe. With the extensions contemplated, the orchid department of the establishment is likely to become a leading factor in the orchid supply of the West.

Adjoining the orchid house is a house of sweet peas, well grown, and in splendid crop.

Scarlet Carnation Andrew Carnegie.

Growers, Chicago Carnation Co., Joliet, Ill.

which are 300 ft., twelve 200 ft., two 100 ft., and two 150 ft. long. All are utilized for carnations, with one exception, a 300 ft. house planted with Killarney, Bride, Bridesmaid, Richmond and Mme. Chateaux roses, and which presents a fine appearance; the roses are grown for the company's retail store requirements.

Attraction centers on the new scarlet carnation, Andrew Carnegie, now being disseminated from the establishment. One of the 200 ft. houses is benched with this sort, 10,000 plants in all. It is a sport from the Harlowarden, with a stem even stiffer than that of its parent. It appears to be very free in its flowering, and is erect and clean in its growth. Every shoot produces a flower, and signs of splitting seem to be entirely absent. It comes into crop early in October and continues throughout the season, furnishing a daily cut. Flowers with 30-inch stems were plentiful in October. The calyx is well formed, and of good substance. As a shipper and keeper it is highly esteemed. In color it is particularly bright, without a tendency to fading. The flowers are of large size, specimens 4 inches in diameter being quite numerous.

Aristocrat is very prominent, filling several houses, and it evidently fulfills all the claims made for it. Naturally, in this establishment, its home, one would expect to see it at its best, and it certainly could not appear better than now. The benches are a mass of bloom and the commercial qualities of the variety are remarkably demonstrated. A house which has been in cut since July is still producing quantities of flowers.

Welcome, a deep pink, is something of a favorite, and

Change of Rose Name.

Paul Nichoff, Leighton, Pa., desires to change the name of his pink rose registered as Aurora to Mrs. Mary Nichoff, as he learns that there is a European variety bearing the former name.

W. N. Rubin, Secretary

National Flower Show Premium List.

The premium list for the National Flower Show is now in press and will be ready for mailing on February 15. Many changes have been made in the list originally published in the trade papers and the same has been largely increased.

It is believed that the complete list carries the largest amount in premiums, medals, cups and trophies ever offered at any floricultural exhibition at any time. Suggestions for premiums have been made and revision of all or parts of the list by about one hundred individuals and firms, and it is hoped that in the form in which it will appear on the above date all classes of exhibitors will be found amply provided for.

It should be noted that the suggestions made to the committee, if all had been carried out, would have required over five times the large sum of money which was available. This condition, of course, made it necessary to strike out many desirable suggestions. All suggestions, however, were given equal consideration on their merit without regard to the names of the persons making them.

Copies of the list may be obtained on application to J. H. Burlett, secretary, 1411 First National Bank Building, Chicago. W. N. Rubin, Chairman.

The Chicago Carnation Co., Joliet, Ill.

The establishment of the Chicago Carnation Co., at Joliet, Ill., is of great interest to visitors just now, many of the varieties of carnations grown there appearing at their best. The ranges comprise twenty houses, four of

Scarlet Carnation, Andrew Carnegie, Showing Growth.

Chicago Carnation Co., Joliet, Ill.

is liberally benched. It is a variety of the Mrs. T. W. Lawson order, and very similar in color. It is, however, liked much better than that variety, proving more vigorous in its growth, and much healthier. It appears to develop its flowers much more quickly and as a continuous bloomer would seem hard to beat.

There is a half house of Daybreak Lawson, a variety which resembles Enchantress, but produces flowers with a better stem and is said to be more productive.

A house of Rose Pink Enchantress looks in good crop, notwithstanding a very heavy cut this season. Winsor is another pink variety which appears to do very well here. It is given a benching of about 4,000 plants, and figures very prominently in the propagating house.

The principal white varieties grown are White Perfection and White Enchantress. The former is in grand shape, the flowers running to very large size. The latter is in excellent crop and the flowers are particularly pure in color. Victory and Red Chief are prominent among the scarlets, as also is Beacon. Red Chief is liked for its extremely free flowering habit, but the flowers are very small. Imperial and Pink Imperial are also grown to a small extent.

The propagating house is working to its full capacity at this season, and is filled continually with cuttings in various stages. The house presents a decidedly healthy appearance, and is an important feature of the establishment.

J. H. P.

Carnation Seedlings at Wa-no-Ka Greenhouses.

CLIMAX is a beautiful, well made pink, a marvel in color, being a shade or two deeper than Enchantress, and a color long desired by the growers and the public. The color is permanent and does not fade. The flowers do not have the irregular form of Enchantress, are borne on long, stiff stems and are very fragrant; they average the season through, 3 inches, and from December to April are 3½ inches and over. They come very early, and with us the plants yield more per season than those of any other light pink variety, Enchantress included. The calyx is remarkably strong and seldom splits. The flower is an excellent keeper and ships admirably well. It does best grown in night temperatures of 48 to 50 degrees. This variety will be disseminated during the season of 1908-10.

WA-NO-KA is named from the India word, Wa-no-Kah, meaning, "Just one of its Kind." The flower is a superb, well formed and fragrant crimson, the plant being of remarkable productiveness. The blooms are borne on extremely long and heavy stems which never grow soft. It succeeds best in a night temperature of 50 degrees, but it can be successfully grown in a higher temperature if desired. The calyx never splits; the flowers average 3 inches, and are first-class shippers. This variety will be disseminated during the season of 1908-09.

APPLE BLOSSOM is a gorgeous, full white, with a delicate pink blending in the center of the flower, suggesting the delicate apple blossom of early Spring. Flowers are borne on long, stiff stems, making a grand display suitable for every purpose. The blooms are very fragrant, come early and are produced in great profusion through the season. The calyx does not split, and the flowers have excellent keeping quality and ship without difficulty or trouble. Best grown in night temperatures of 48 to 50 degrees. This variety is distinctly of the "bread and butter" sort, its prodigious blooming quality making it one of the foremost carnations of to-day. Flowers average 3 inches through the season. To be disseminated during the season of 1908-09.

Barneveld, N. Y.

WA-NO-KA GREENHOUSES.

CLUB AND SOCIETY DOINGS.

LENOX (MASS.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held Saturday, January 18, President Jack in the chair. Percy Ellings was elected a member. The schedules for the August and Fall exhibitions were adopted as read. S. Carlquist was awarded a diploma for a fine vase of Celsia Arcturus. The annual banquet of the society will be held at the Curtis Hotel, on Saturday, February 15, and promises to excel anything ever before held by the organization. The fourteenth annual concert and ball was held in the Town Hall on January 22. This event is always looked upon by the people of Lenox as one of the chief attractions of the winter season, and the present affair proved no exception, fully two hundred couples participating in a very enjoyable evening. The committee of arrangements, of which H. P. Wookey was chairman, is to be congratulated upon the social and financial success attending its efforts. GEORGE H. INSTONE, Secretary.

Cultural Methods for Carnations

By IRVING GINGRICH, South Bend, Ind.

The subject of this paper is really one that should have been assigned to a grower of long and wide experience, as the writer feels that he is just beginning to learn something concerning the culture of carnations, his experience dating back only eight years; but during this time mistakes have been made that he has profited by and, if he can say something that will be of benefit to but one out of ten of the growers here assembled, he will feel well repaid for the effort. The writer will also endeavor to confine himself very closely to his subject, as any slight digression will make the paper entirely too long.

Beginning with the propagation of the carnation we may say that in this country the commercial grower has but one method, i. e., by cuttings. The specialist makes use of seed propagation to secure new varieties, but we will not discuss this method as the average grower cannot devote the time and attention absolutely necessary to success in this special field.

There exists a marked difference of opinion as to where and how to take a cutting and this subject received considerable attention at our Toronto meeting. There are, however, many present here who were not fortunate enough to be present at Toronto. At that meeting a discussion was raised as to what constitutes a top cutting, some being of the opinion that it was one taken rather high up on a flowering stem and others maintaining that it was the top taken out of one of the bottom shoots which would ultimately have become a flowering stem itself. The writer's own experience, supported by actual experiment, is that neither is an ideal cutting, the former soon sending forth a bud which, if removed, will send up four or five weaker buds and, if these are "stopped" or pinched back, the plant is gone; the latter sends up a rank growth which, on stopping several times, as the growths are ripe for the operation, produces a heavy but rather slow growing plant with plenty of foliage and few flowers. These statements must be made with some reservation as the writer has not had much experience with different soils and these exert a marked influence on the growth of the plant.

A heavy, rich soil might produce a fairly good plant from a "top side shoot" cutting, whereas a light, quick sandy soil might have the same effect on the other. Our soil being a medium chocolate loam, with considerable silt in its composition and not overly rich, we much prefer a side cutting on a flowering shoot taken at one joint above and one joint below the usual point of cutting the flower. Cutting off the flower therefore requires some discretion as some varieties develop the cutting before the bud matures and some varieties do not develop the cutting until after the flower has been removed.

With us January and February are the best months in which to take cuttings though there are others who prefer March struck cuttings on account of the rapid growth made in their particular soil. Such slow growing varieties as Prosperity need to be taken in December to make profitable plants.

It matters but little whether the cutting is taken with a "heel" or not. If taken with a heel it is grasped firmly between the thumb and forefinger and severed from the stem with an upward and outward movement. This takes the leaf and part of the wood of the flowering stem with the cutting. The old wood is then cut off an eighth or a sixteenth of an inch from the end of the shoot and the cutting is ready for insertion in the sand. In March or later it is well to clip off the ends of the leaves to reduce the transpiration or loss of moisture. Cuttings not taken with a heel, and cut off at the base to any extent, should be cut slightly below a joint so that when the lower leaves are pulled off backward they strip off the outer bark, leaving the inner cambium tissue adhering to the wood. It is on this tissue that the roots form. Whatever may be the method of taking and trimming the cutting, the most important thing is its treatment after reaching the sand.

After trimming, the cuttings are given a "drink" by soaking for a half to one hour in fresh water to thoroughly fill the tissues and prepare them for the ordeal to come.

The best propagating bench is six inches deep, with a layer of brick on the bottom to distribute the heat and moisture evenly, and filled up with clean sharp sand. This is wet down and packed hard with a brick. Then wet again slightly, cut a crack in the sand with an old putty knife and straight edge. The rows can be two inches apart and three-quarters of an inch in the row or three inches apart and one half inch in the row. The cuttings should not extend more than one-half inch below the surface of the sand. After the cuttings are in, water with a sprinkling can or with the hose if you have it fitted with a sprinkler head. Syringe lightly for several mornings, then gradually let the sand dry out, always being careful, however, that the foliage is not allowed to wilt. During this period the cuttings are impugned of drafts and ventilation must be very carefully looked after as a trifle too much air may result in the loss of an entire crop of cuttings when all other details have been faithfully carried out. Direct sunlight

should not be allowed on the cutting bench, at least until the cuttings show signs of rooting, after which anything but midday sun will prove beneficial. The propagating house should be 45 to 50 degrees at night with 60 degrees in the sand. Some prefer to have no bottom heat, but we have had no success without it.

In three or four weeks the cuttings will be ready for planting out and for speed, and good results generally, we always plant direct to a bench in three inches of soil that is somewhat spent. If such soil is not available, mix enough sand with it so it will not be too rich, as a rich soil will cause considerable damping off. If so desired, they can be potted up in 2½ inch pots, using a heavy loam lightened with well decomposed leaf mould. They can be planted into the field without a shift and this ball of soil will remain intact when lifting time comes. December struck cuttings planted direct into a bench four inches apart each way, and January struck cuttings 3½ inches each way, can be planted in, without field culture, by June 1. But by all means plant out into the field all cuttings coming from the propagating bench later than the middle of February. If you can have your bench for young stock arranged to give a gentle bottom heat for a few weeks after coming from the cutting bench the plants will show grateful appreciation. This is not necessary but it is desirable. During this period weeding and stopping should be carefully attended to. We make it a rule to go over the young stock once a week regularly and then stop or cut back only those plants that are really ready for the operation. When a plant is ready for stopping it will be brittle and can be "snapped off" very readily, and this method cannot be too strongly advocated since the knife will carry disease from one plant to another. At this stage the plants are very tender and disease is most easily transmitted.

Irving Gingrich, Essayist

About May 1 the young stock is ready for the field. Benched plants can be taken up with a trowel with a good ball of earth slightly pressed together to keep it intact. Place in flats and take to the field. Let one man or boy distribute the plants about where they ought to go in (this can easily be determined from the adjoining row), and another follow with the trowel, with which he makes the hole with a single stroke, inserts the plant and presses firmly into place without dropping the tool. The rows should be sixteen to eighteen inches apart and from eight to ten inches in the row.

Weather conditions at this time of the year are uncertain and the work should be so planned as to get as many plants as possible out before a rain. In sandy soil without a bottom, and in dry seasons, a Witbold or Skinner watering system is very beneficial in the field. Neither is expensive to install and the benefits are out of all proportion to the cost of installation.

After the plants in the field become well established stopping should begin again and continue weekly to within a week or ten days of lifting time. Make free use of a hand wheel cultivator to keep the weeds in check and mulch the soil to conserve the moisture. If artificial watering has been resorted to, cease the operation long enough before lifting begins to ripen the growth.

In our locality, lifting begins from July 15 to August 1 according to the quantity of plants to be benched. At this time have a convenient number of crates, eighteen

inches wide and three to four feet long prepared. Spread the bottoms with one or two inches of wet moss to keep the roots moist until planted in. Two men with spades dig on both sides of the plant simultaneously and lift. A third shakes off the soil, inserts the roots in a bucket of water and places them in the crates with roots standing on the moss.

When the plants are lifted from the crates the roots are shaken out so they will spread, and a man on either side of the bench does the planting by making a hole with the hand or trowel, spreading the roots out evenly, bringing the loose soil around the roots, jumping the plant up and down gently to distribute the soil particles among the roots, and then firmly pressing in, leaving a shallow depression around the plant to receive the first few waterings. The plants should not, under any circumstances, be set lower in the bench than they were in the field; this will save many a loss by stem-rot. Care should also be taken to have the smallest plants on the south side of the bench and the largest in the center or north of the center of the bench. By Winter you will be able to distinguish but little difference in the size of the plants.

During the planting-in period the glass should be heavily shaded with a clay wash squirted on the glass with a syringe to cool the houses and prevent wilting.

And now let us take up a matter that has been omitted: the soil for the bench. If you can secure top soil from a pasture where the soil is loamy, and to the feeling "velvety," you have an ideal carnation soil. We do not mean to say that carnations cannot be grown on any other kind, for the writer has seen most excellent results secured from widely divergent textures of soil. We merely mean that the soil mentioned requires the least skill to get good results. When you have secured the soil remove four or five inches of turf, place in piles, grass side down, with one-fourth good cow manure during the Fall preceding the time wanted. Chop down and work over several times during the Winter and Spring, add a four-inch potful of air-slaked lime to one barrow of soil, run through a coarse mixer and it is ready for use. If this is impracticable, take any good loam that contains no decaying vegetation, work it over several times to germinate and kill the weed seeds it contains, and wheel on the benches after spreading one and a half inches well decomposed manure on the bench bottoms. Add the lime as with the compost.

Resuming the treatment of the plants, syringe lightly several times a day and, as the plants take hold of the soil, gradually remove the shade. From now on water the entire bench and, after the weeds have been thoroughly disposed of, a mulch of spent manure, mixed with light soil, will be beneficial in retaining the moisture. Syringe once a week on bright days throughout the season to keep down red spider. Fumigations of nicotine products every two weeks will keep aphids in check.

If the soil has been well enriched further feeding will be unnecessary until the first crop of flowers has been harvested. Then, after a week or two of rest, a light mulch of sheep manure, with one-tenth part of dried blood added to secure a generous surplus of nitrogen, may be given to hustle the growth along. This may be followed two to three weeks later by a dressing of wood ashes to ripen the growth. After another interval a dressing of bone meal will materially assist the development of the second crop of buds. This rotation may be continued to the end of the season by increasing the quantity according to the growth of the plants. Toward Spring a mulch of rotted cow manure may be added. Among the commercial fertilizers as good a combination as we have yet found is 500 pounds of bone meal, 200 pounds muriate of potash, 100 pounds of nitrate of soda, the latter two well pulverized, and the whole well mixed and applied at three week intervals at the rate of a handful to two rows half way across the bench.

In conclusion let me say that this is far from being an exhaustive treatment of the subject. It would be impossible to give one within the limits of such a paper. Every grower will find it necessary to adapt his cultural methods to his local conditions and these he can only find out by actual experience.

NEW H. T. ROSE URANIA.—The Gardeners' Magazine, London, Eng., pictures in its issue of December 14, 1907, a bloom of M. H. Walsh's new rose Urania cut from the open ground in an English nursery at quite the end of September. The flower was 5 3-4 inches in diameter. The variety is considered a valuable autumnal rose in England.

A NEW HARDY ROSE.—Clarence Wedge describes, in the Northwestern Agriculturist, a new hardy rose named Hansa, as follows: "This is of a rich shade of red, perfectly double, and the buds in each cluster opening at about the same time give the appearance, at a distance, of single blooms of immense size. Like the larger share of this class of roses it is of reliable hardiness anywhere in Minnesota."

Carnation Beacon.

As grown by W. W. Coles, Kokomo, Ind.

The Beacon Carnation.

The accompanying photograph does not begin to do justice to this fine new carnation. We have a bench of 750 plants in one of our new King Construction houses, and it has been a mass of flowers for several months. We consider Beacon the best and most profitable red carnation to date. A bench of Winsor, in the same house has also done remarkably well. We shall grow very largely of these two varieties next season.

W. W. COLES.

National Council of Horticulture.

A meeting of the National Council of Horticulture was held at the Auditorium Annex, Chicago, Ill., January 22, 1908.

In accordance with the original stated composition of the Council, the term of service of the delegates at large was arranged so that one-third (or three) of the number should expire at the end of each calendar year. The delegates were accordingly divided into groups as follows:

Terms expiring Dec. 31, 1907: J. H. Hale, H. C. Irish, Prof. E. J. Wickson.

Terms expiring Dec. 31, 1908: J. Horace McFarland, Prof. L. R. Taft, Prof. W. W. Tracy.

Terms expiring Dec. 31, 1909: Prof. W. B. Alwood, Prof. S. A. Beach, Prof. S. B. Green.

By unanimous vote, the following were elected to succeed those whose terms expired Dec. 31, 1907: Prof. R. S. Macintosh, Auburn, Ala., to succeed H. C. Irish; Prof. W. T. Macoun, Ottawa, Ont., to succeed J. H. Hale; Prof. E. J. Wickson, Berkeley, Cal., to succeed himself.

It was voted to request the national organizations represented in the Council, if agreeable to them, to take necessary action authorizing the secretary of such organizations to be one of the delegates to the Council. After full and free discussion the following plan was arranged for the Press Bureau service for the coming year:

- (1) That at least sixty-eight articles be used, or four for each week, for a period of seventeen weeks.
- (2) That these articles be sent on each of the fifteen weeks from Feb. 15 to May 31, and the last week in September and first week in October.
- (3) That the secretary be authorized to expend not more than \$75.00 for the preparation of fifty articles, which, with twenty already in hand, will give the desired number.
- (4) That these articles be prepared at the earliest practicable time, and copies made and submitted to the delegates from the contributing organizations for their approval.
- (5) That the matter be sent to about 500 newspapers and newspaper syndicates (through whom it goes to several thousand publications), which will cost \$20.00 per week for four articles.
- (6) That a schedule be prepared giving the title of each article to be used, and the date when it is to be sent out; this schedule to also include a list of the newspapers and newspaper syndicates to which the articles are to be sent.

The secretary reported funds on hand of \$11128, and he has been advised that the Society of American Florists has set aside \$150.00; the American Association of Nurserymen \$200; the American Seed Trade Association \$200.00, or a total of \$550.00 for the purpose of the Council, which together with the funds actually in the hands of the secretary make a total of \$66428 for Press Bureau service during the year. The schedule of expenses as outlined amounts to \$85.00 which, if ex-

pected, will leave a balance at the end of the year of \$3928.

A letter was read from J. Horace McFarland, suggesting that an effort be made to encourage the improvement of the planting conditions about country schools, by including in the Press Bureau service articles which would show the desirability of such planting, and enlarging upon the bleakness and unattractiveness of so many of the country schools, and to emphasize the desirability of using for the most part, hardy native plants, and at the same time where school grounds are sufficiently capacious, to encourage the development of the children's garden idea. The writer referred to several examples, namely: Washington, Yonkers, N. Y., and Rockford, Ill., where much has been done along this line. It was proposed to get a few such articles prepared.

A letter was read from J. P. Wilson, secretary of the American Nut Growers' Association, giving suggestions in reference to the exploitation of horticulture, and explaining the work that is being done by that organization.

A letter was read from J. W. Fitch, secretary of the Wisconsin Cranberry Growers' Association, inquiring about the Press Bureau service and the practicability of using a few articles on the importance of cranberries as an article of diet. The secretary was instructed to correspond with Mr. Fitch, offering to use four articles at the approximate cost for such service of \$25.00.

Letters were read from officers of several State and district societies in response to a circular letter sent out by the secretary of the Council to such bodies some weeks ago.

H. C. IRISH, Secretary.

Wm. Flemer, V. P. and Treasurer

Fred'k W. Kelsey.

President American Nursery Company.

American Nursery Company.

An incorporation under the laws of the State of New York, with a capital stock of \$100,000, with authority to do a general nursery business, has been accomplished whereby four local establishments have been brought together under one control, the new company acquiring all the real estate, property, business and good will of the F. & F. Nurseries, Springfield, N. J.; the Bloodgood Nurseries, Flushing, L. I. (established 1790); the N. J. & L. I. Nurseries, and the business of Fred'k W. Kelsey, of New York; all these old established concerns to be hereafter conducted as branches of the new company under the same local managements as heretofore.

The officers of the company are: Fred'k W. Kelsey, president; Theodore Foulk, vice-president; William Flemer, vice-president and treasurer; and P. H. Goodsell, secretary.

In an interview with Mr. Theodore Foulk, of the Bloodgood Nurseries, Flushing, N. Y., that gentleman stated that its stockholders and directors, because of the difficulty of securing land in their present locality and the unstable leases possible to be made, deemed it wise to fix some of its interests elsewhere, and so insure to its business a more stable and enduring life. For this reason it embraced the opportunity offered in the new incorporation to ally itself with reputable and growing nursery interests that had red blood in their veins and were conducted by men of responsibility and character.

The Bloodgood Nurseries is the oldest continuing

nursery in America and is well and honorably known throughout the land.

The F. & F. Nurseries, located at Springfield, N. J., has, for 25 years, made steady progress under the able management of Mr. Flemer. This nursery covers an area of considerably more than 100 acres.

The N. J. & L. I. Nurseries is an enterprise started some eighteen months ago by Mr. Flemer and Mr. Foulk of the Bloodgood Nurseries. The nursery contains more than 100 acres, a larger part of which is already planted.

Mr. Fred'k W. Kelsey has been actively engaged in the nursery business for a period of 25 years, and has conducted a successful and constantly enlarging business. That gentleman has also been largely instrumental in developing the parks of Essex County, N. J., and is deeply interested in whatever makes for public benefit.

From this it will be seen that the new company starts under very favorable auspices, with complete and extensive producing and distributing facilities and ample financial resources.

Carnation Victoria.

This variety is a cross between Mrs. Thomas W. Lawson and Harry Penn and is now in its fourth year. The originator and grower, Mr. J. H. Cushing, of Quindnick, R. I., says: "We have made a thorough test of it, both at our own place and at other establishments, and it has done remarkably well wherever tried. The flowers measure from 3 to 3½ inches in diameter and are carried on long stiff stems. The color is of a little lighter shade than Mrs. Thomas W. Lawson, but the difference is so little that it is easily taken for that variety so far as color goes. The habit of the plant is robust; it is a very strong grower and comes into flower early and continuously, yielding more blooms per plant than any variety we grow. We style it a 'money-maker.'"

Carnation Victoria.

Grower J. H. Cushing, Quindnick, R. I.

METROPOLITAN MATERIAL CO. Greenhouse Wreckers 1398-1408 Metropolitan Avenue, BROOKLYN, N. Y.

Utica, N. Y.

Here and There.

I made a call on C. F. Seitzer and found everything in good shape. Roses are fine and carnations extra, especially a house of Rose Pink Enchantress, which the writer thinks the best to be seen anywhere around Utica.

Frank McGowan has made great improvements since my last visit. He has as fine a house of Mrs. Lawson as one would wish to see; it does not look as if this variety had seen all its good days yet. Lady Bountiful is just simply grand and has been all the season; Mr. McGowan says it is good enough for him in white; he is propagating all of it he can. He has now several thousand good rooted cuttings of all kinds. The new houses built last year are planted to sweet peas.

J. C. Bigelow & Son have everything in good form; they have one of the best heating systems in these parts.

Robert Boyce, James street, reports trade active. Carnations here are first-class. He also grows sweet peas well.

Frank Baker was at the City Hall. He was elected last Fall President of the Council and is a busy man. Everything on the place, under Mr. Kauffer's supervision, is in fine condition.

At Deerfield, three miles from Utica, I found Mr. Hermant, Sr., just recovered from a recent sickness; his son is still in the house ill. They have built one large house of Lord & Burnham construction, 40x80 feet, which is planted to carnations and sweet peas, and have been cutting the latter in quite large quantities since the first of December.

Peter Crowe was busy planting a house of roses after being out of rose-growing for the past five years; he said that he just wanted to find out if he had forgotten anything about this culture. He expects to add several more houses in the Spring to be devoted to roses, and may build new houses for that purpose. The demand for Adiantum Croweanum is still as good as ever; this fern was looking at its best.

Brand Brothers' five carnation houses, added to this plant last year, are looking fine, as are roses Bridesmaid, Bride and Liberty, the kinds grown here.

The plant of W. A. Rowlands, Whitesboro, N. Y., is devoted entirely to carnations; all are in first-class condition.

FOR SALE

FOR SALE—Lot of glass, 16x24, 4 in. pipe and greenhouse material. Address, Luna Park, West Orange, N. J., or call 91-33 Monmouth street, Newark, N. J.

FOR SALE—A large consignment of 16x24 double thick American glass, A and B quality. For further information, write Parselsky Brothers, 50 Monroise Avenue, Brooklyn, N. Y.

FOR SALE—Greenhouse material and hot-bed sash, milled from Gulf Cypress, to any detail furnished, Oxford putty, specially made for greenhouses and hot-bed sash. V. E. Reich, 1429 Metropolitan avenue, Brooklyn, N. Y.

FOR SALE—Second-hand boilers. One No. 5 Weathered, capacity 1,000 feet, 4 inch pipe; one No. 5 Hitchings, capacity 900 feet, 4 inch pipe; one No. 57 Hitchings, sectional, capacity 2,600 feet; two eight-sectional Weathered boilers. Write for information and prices. Wm. H. Lutten, Opp West Side Avenue Station (C. R. R. of N. J.), Jersey City, N. J. Telephone 412 Bergen.

FOR SALE

New greenhouse glass, very cheap for cash. Send inquires. Address C, care The Florists' Exchange.

FOUR GREENHOUSES

FOR SALE OR TO RENT

17 feet wide, 125 feet long, modern structure. Built only a few years; in first-class order.

Write to **ROWELL & GRANZ, Hicksville, L. I., N. Y.**

REVIEW OF THE MARKET

NEW YORK. The cut flower business continues to be rather below the average for the season of the year. Roses have not as yet begun to be real plentiful, but carnations are showing an increase in quantity which is quite noticeable. The Vanderbilt wedding, which came off on Monday last, did not create a ripple as far as affecting market values. There are plenty of orchids and other flowers on hand to meet all demands just now without the least trouble. Owing to the slight diminution in quantity of special American Beauty roses, an effort was made in the beginning of the week to push the price to 75c. each; this, however, proved futile. While a limited number may have gone through at that price, 60c. was about all that most of the buyers would stand. In Bride, Bridesmaid and other tea roses, the prices remain about as they were last week, and the shorter grades are much easier to dispose of than are the special and fancy blooms. A decrease in the averages of carnations will, no doubt, be felt this week, as prices are not holding up near so well as they did one week ago. Grades that brought \$3 and \$4 per 100 at that time have had to be sold anywhere from \$2 to \$3 per 100. Lilies are getting to be much more plentiful and prices are downward. Lily of the valley is probably one of the worst sellers on the market just now. There is a lot of it coming in of various grades, but neither the short-stemmed nor the special grade stock seems to be meeting with any demand.

Gardenias are not in heavy supply and prices remain about the same. Lilac is getting more plentiful, but is rather hard to dispose of, even at our quoted prices. Paper White narcissus continues to be plentiful and cheap, the yellow bring much better returns. Narcissus poeticus has begun to come in, the best of it fetching \$1.50 per 100. Violets have been very plentiful and have had to be clogged out at times as low as 25c. per 100; this is, of course, for stock that has accumulated and had to be moved; the ruling figures seem to be about from 30c. to 60c. per 100 for fresh stock. Tulips of several varieties are coming in now, some of the long-stemmed better sorts in red bringing as high as 3c. each at times. Freesias are coming in regularly, but there is much variation in the size of the bunches and the length of the stems of the flowers. Prices range anywhere from 10c. to 20c. per bunch, an occasional fine lot fetching as high as 25c. per bunch.

CHICAGO. The market is in a fairly satisfactory condition. While the improvement noted last week is maintained the volume of business can hardly be said to be greater, but there is a strong tone to transactions which is very encouraging. Prices are practically unchanged. A touch of real winter has shortened arrivals a little in some lines, but there is plenty of everything in season, and some products still run to the point of excess. Carnations are very plentiful, but move pretty well, inferior stock only hanging fire.

Roses are the best thing in the market, cleaning out well. American Beauties continue in good supply, and there are plenty of the Bride and Bridesmaid varieties to go around. Killarney is also well in line, both as regards supply and demand. Richmond roses are not so plentiful. Bulbous stock is coming in heavily, and at times is hard to move. Narcissus and daffodils drag considerably. Tulips, while not unduly plentiful are not much to boast of in quality, as a general thing. Some growers are complaining of the quality of the bulbs they received for planting, and attribute the poor appearance of the flowers to this drawback.

Violets move well, some of the locally grown stock going off better than the Eastern arrivals, and commanding top prices. Some fine callas are coming in and are taken freely. Lily of the valley is improving in quality, some good long stemmed well flowered stock making its appearance this week. Sweet peas are rather short in supply, and the offerings are largely of short stemmed stocks. If the cold weather continues a little shortening of the supply is probable, and the relief thus to be obtained will serve to strengthen the market considerably. J. H. P.

St. Paul.

Notwithstanding a general apathy or quiet in most lines of business since January 1, the flower business has been active. The weather has been most favorable to the growers, the days warm and bright, and more like Spring than Midwinter. There has been a good choice of cut flowers, though at present many houses are "off crop." Violets have been especially plentiful and of good quality.

Social events have not been numerous, though there has been "something doing" most of the time. The mild weather, however, has been conducive to grippe, pneumonia, and its attendant trail of misery and death and the demand for funeral flowers has been unusually heavy. White roses and white carnations are becoming scarce in this market. Other flowers are equal to the demands.

The first regular meeting of the Twin City Florists and Gardeners' Club was held at Holm & Olson's store on Tuesday evening, January 21, and the club was successfully launched on what we hope will be a long and prosperous cruise.

In absence of President Wirth, Vice-President Olson presided. About seventy charter members paid their dues and gave the necessary impetus in a financial way. E. Nogel, of Minneapolis, read a paper on "Bedding and Bedding Plants," which was quite thoroughly discussed, and resulted in a committee being appointed to get the growers and store men together to agree on prices for this season. VERITAS.

KALAMAZOO, MICH.—There has been very little change in the state of trade during the past two weeks. Business lacks the usual snap customary at this season and while at times funeral orders and shipping trade are brisk the general tone of affairs is quiet. Stock is not coming along as fast as anticipated, which under the circumstances is not regarded as a heavy crop just now would be hard to dispose of. I do not think, however, the florists are suffering any worse than any other industry from slack trade; indeed I am of opinion our business is better than most and considering the season, rather better than expected. Prices at present are holding fairly good; American Beauty, \$3 to \$8 per dozen; tea roses, 75c. to \$1.50. Carnations, 40c. to \$1 with the general run at 50c. and 60c. per dozen. Violets are plentiful at 25c. per bunch, and bulbous stock sells at 50c. and 60c. per dozen.

Trade in the smaller class of plants such as primulas, cyclamen, hyacinths, etc., and such stock as retail at from 25c. to 50c. per pot, shows a falling off from last year, doubtless owing to the fact of employment among the skilled working class not being so good as usual. Shops and factories here are starting up again and some improvements are being talked of, which we hope will materialize, as we need something that will put the yam and snap into business that we experienced in the past year or two.

This winter has not yet had any very severe cold or stormy weather, so the growers have profited some on the coal bills, which is an item to be thankful for. The local nurserymen expect to have a good Spring trade this year and report orders coming in more freely than usual at this time of the year. S. B.

BOSTON. Trade has remained very much in the same condition for the past two weeks. There is a fairly good demand especially for white flowers. Roses are not plentiful and good prices are realized for such as Richmonds and Killarneys and, by the way, these two roses are proving the best sellers of any with perhaps the exception of American Beauty. There is a good demand for high grade flowers of this latter variety. Colored carnations are more plentiful than white which seem to have an extra good demand at present. Lilies are plentiful. There are some good specimens in the market as well as longhorns. Lily of the valley has a steady demand. Sweet peas are of excellent quality and sell well. Violets are plentiful and cheap. Bulbous stock has improved in quality and sells fairly well. Magnolia is a good thing. There are lots of other flowers in small quantities like marigolds, peonies, and corn flowers, which have a regular demand. J. W. D.

ROCHESTER, N. Y. The market for cut flowers is about the same as last week. The price of carnations is holding up well, but there is a general feeling of apathy. Tulips are coming in and are well received. Violets are still in demand. The weather is favorable, but the cold snap has caused some damage to the plants. The florists are generally satisfied with the current trade.

ROCHESTER, N. Y. But for the increased quantity of funeral work being called for each day, general trade would be dull. This fact, of course, does not keep prices to a fixed figure, although no material is going to waste. Roses run from \$3 to \$6 per 100; carnations, \$1.50 to \$3; violets, 35c. to 50c. per 100; lily of the valley, \$2.50 to \$4, and sweet peas, \$1 to \$2. Bulbous stock, such as Paper White narcissus, tulips, Roman hyacinths and daffodils, are sold according to size and variety, double flowers, of course, being in advance of single. Now that the days are lengthening all varieties of flowers are improving so that they can be handled more satisfactorily.

Grippe is playing havoc with the working forces in the several greenhouses, quite a few men being home; but it seems prevalent all over the State, so we are in the swim. COCKNEY.

Cincinnati.

Trade with the flower shops during the past week has been very much on the quiet side. Stock of all kinds is plentiful with the wholesalers, but none going to waste; funeral work is the principal cause for the demand.

Fred Lautenschlager, seller of boilers, was a caller Saturday and Sunday on his way to Washington, D. C.

R. Witterstaetter and wife left at noon January 27 for Washington, and I believe these are all from Cincinnati; others who intended going were detained by illness.

E. G. Gillett moved January 21 from his old quarters to 111 East Third street. J. A. Peterson and family have all been down with grippe; three of C. J. Jones' help are laid up at this writing, and Mr. Jones himself is just recovering. William Murphy and his help in the wholesale shop here have all been sick. E. G. G.

Chicago Notes.

A number of Chicago florists will attend the third annual convention of the Illinois State Florists' Association, to be held in Springfield, Feb. 18 and 19. There is to be an extensive exhibition of cut flowers, plants, floral supplies and greenhouse material and auxiliary. The Springfield Florists' Club is looking after exhibition details, having appointed a special committee for the purpose.

The exhibition and convention sessions will be held in Arion hall, which is within one block of the C & A depot. The building is well heated, so that no fear need be entertained for the care of plants and flowers forwarded for exhibition. The local florists will take care of all exhibits arriving from distant points in attendance. All communications regarding exhibits should be addressed to A.

CHICAGO. The market for cut flowers is about the same as last week. The price of carnations is holding up well, but there is a general feeling of apathy. Tulips are coming in and are well received. Violets are still in demand. The weather is favorable, but the cold snap has caused some damage to the plants. The florists are generally satisfied with the current trade.

CHICAGO. The market for cut flowers is about the same as last week. The price of carnations is holding up well, but there is a general feeling of apathy. Tulips are coming in and are well received. Violets are still in demand. The weather is favorable, but the cold snap has caused some damage to the plants. The florists are generally satisfied with the current trade.

HARRY ROWE says that in spite of the stringent financial situation, his business shows a material increase so far this month over January of last year.

The death of Gustave Wittbold, of the Geo. Wittbold Co., which occurred January 24, is deplored by all who knew him. While he took no part in club affairs, he always had the interests of the florists' business at heart and lent them all the help possible. At the funeral on Monday, there was a good representation of the trade, and many beautiful floral pieces were in evidence.

H. E. Philpot, manager of the Chicago Floral Co., Winnipeg, Manitoba, was in town last week. He reports an excellent holiday trade in his section. The weather at Christmas was exceedingly cold, between 20 and 30 degrees below zero, but notwithstanding this extreme his wagons made about 1500 deliveries and losses attributed to exposure were only reported in six cases. In severe weather they use a shipping box of their own construction; it is about 10 feet long, 3 feet high and 3 feet wide, lined with blankets and having a central compartment in which is placed a Lehman heater.

F. R. Pherson, Tarrytown, N. Y., was a visitor at the establishment of Jensen & Dekema last week.

G. McReynolds of Glen Cove is shipping some fine double violets daily to E. H. Hunt.

Edwin Hauswirth has the sympathy of the trade in the death of his little son, four months old, the funeral took place on Monday.

The wholesale ranks have been augmented by the advent of Jos. Forrester, formerly with Geo. Reinberg. He has taken quarters in the Flower Growers Market and will conduct a commission business.

Chicago and vicinity will be well represented at the convention of the American Carnation Society, held this week in Washington, D. C. Among those who left on Monday morning were James S. Wilson of Vaughan's Seed Store, Western Springs; Aug. Buchmann of the Pechmann Bros. Co., W. N. Rudd, J. E. Jensen of Jensen & Dekema, and T. A. Pater, manager of the Chicago Carnation Co., Joliet, Ill., accompanied by P. Olson, the company's grower.

J. D. Crozier, of Des Moines, Ia., was a visitor last week, and Frank Stuppy, of St. Joseph, Mo., is visiting the trade this week.

The National Council of Horticulture at the Auditorium Annex Hotel on January 22 arranged plans for the general publication of authorized articles on horticulture, and especially the encouragement of ornamentation of public school grounds. The Council will petition Congress for a law placing horticultural teaching in the curriculum of the public schools of the United States.

NEW ORLEANS, LA. A greenhouse, 150x34 feet, which, with the heating apparatus, cost \$12,000, has just been completed in the City Park, and will be utilized for the growing of rare flowers and decorative plants.

POUGHKEEPSIE, N. Y. Gordon Morris, formerly of George A. Rowley, has been called to his home near Albany, N. Y., Friday night, January 10, 1908, after an illness of 28 days.

Rochester, N. Y.

News Notes.

Among the many attractions seen in the floral store windows are some pot-grown azaleas, imported by Salter Brothers. That these are beautiful plants, and, on the whole, well budded, is true. They are grown into standard shape, similar to baby box trees, with stems twelve inches long, on top of which is a symmetrical sphere of leaves, buds and blooms, sixteen to eighteen inches across. The claims made for them by the grower are, that they are more easily forced, early; that the buds develop more evenly; that they lose comparatively little foliage during shipping and can be packed more economically than field grown plants; also that, when in full bloom, they resemble a handsome table bouquet, which, with decoration on pot, or cut off and put in vase, makes a decided and useful novelty.

At a recent public dinner given in Genesee Club House, one variety of these was used for the table with telling effect, standing, as they did, erect and distinct, yet not out of place, in the center of each table. Several varieties were grown for experiment—Vervaneana, Sigismund Brucker, Simon Mardner, Hexe and Eggebrechti; the Hexe variety not being round-headed, but allowed to develop naturally. Eggebrechti is an old variety that has been missing for about fifteen years, and those who know it formerly claim for it the fact of its being the best keeping azalea when in bloom; which fact also the writer can sustain, it having been his great pleasure to watch these plants every day. In color they are darker than Simon Mardner, resembling in shade Richmond rose—very pleasing to the eye, and a shade of color not found in any other azalea.

Referring to the buds opening evenly, not much can be said in their favor, although here, with such a lack of sunshine, the conditions have not been favorable for such development. When the plants were received last November, they were found in good condition, and, as the ball of roots fitted to a nicely a five-inch azalea pot, no trouble was experienced in getting them into the greenhouse, since which time they have lost no foliage. They retail readily for \$1.50 and \$2 each, but the first cost is much greater than field-grown plants, and whether there is enough demand for them so as to make another importation, is a fact to be determined at future date. All things considered, they are first class, and, as a novelty, deserve more general use on a small scale.

At J. B. Keller Sons' can be seen some "Rokoko" cyclamen. These were grown well, and show the excellent results obtainable where careful attention is given. They come in a variety of color, the petals being much broader and heavier than the older variety, also the edges of petals are beautifully fringed. The flowers do not open so readily as in the older variety, but, as they are in their experimental stage, better ways will be found to handle them. They sell as readily as others, the larger and fringed flowers securing better returns.

Moschosa riparium was seen here last week for the first time, and many dubbed it "Flowering Catnip," on account of the odor from the leaves. When in full bloom it is very pretty, having stems of pure white flowers fifteen to twenty inches long, a spray of bloom coming from the axil of each leaf on both sides of stem. It is desirable either cut or grown in small pots for basket work, for which latter purpose it is perhaps the most suited. It delights in a warm atmosphere and is not over-fond of water. Plenty of sunshine is necessary, and frequent syringing should be resorted to, to keep down mealy bug. Each shoot gives a good, strong spray of bloom, and it is the writer's opinion that roots of this, planted in a bench, would give profitable results to those whose trade could use it. It is a great feeder and quick grower; a sudden check is had for it, the leaves soon showing any ill treatment. The blooms should be cut as soon as color is showing, as when in full bloom, the flowers drop and look dirty. Putting it in a cool place a few hours at the cutting is a decided advantage to its keeping qualities.

Several firms here tried Salvia Zurich for Christmas blooming, but all agree that, as far as Rochester is con-

cerned, its adaptability is of small moment; as, when sent from greenhouse to store, plants with eight to fifteen blossoms were discarded because the blooms dropped off; consequently, no firm sent it out. But from appearances it should be a grand bedder, and extensive propagation is now under way for this purpose. COCKNEY.

Boston.

A Flower Show.

The Boston Co-operative Flower Growers' Association expects to have the best exhibition ever held by it on February 29. The following prizes are offered: In roses, \$10 first; \$5 second, for American Beauty, pink, red, white and any other color, 25 flowers respectively. For best new rose, a silver cup valued at \$25. Carnations in Class A, first \$5; second \$3, are offered for 50 each of crimson, dark pink, light pink, scarlet, white and any other color; and for 25 blooms of the same colors in Class B, first prize \$3, second \$2, are offered. In Class C, for 100 blooms in one vase, not less than six varieties, the first prize is a cup valued at \$15; second prize, \$7.50. Classes A, B and C are only for standard or disseminated varieties. In Class D for vase of 100 blooms, one variety, new or standard, the first prize is a cup valued at \$25; second prize, \$7.50. In Class E special premiums are offered by firms or individuals as follows: First prize, \$3; second, \$2, for vases of 100 white, 100 pink and 100 any other color sweet peas, respectively. In violets, first prize, \$3; second, \$2, for 100 Lady Hume Campbell, any other double, Princess of Wales and any other single.

Prizes in the miscellaneous class are: For best vase of 50 tulips, first prize, \$5; second, \$3; 50 narcissus, the same amounts. Best collection of bulbous stock, not more than 25 of a variety, first, \$12; second, \$8. For 50 lily of the valley, \$3; 50 marguerites, \$2; 25 mignonette, \$3; 100 pansies, \$2; 25 antirrhinums, \$3.

Thirty square feet of space will be allotted to any exhibitor of pot plants, and suitable awards will be made for any exhibit of special merit.

The first exhibition of the season of the Massachusetts Horticultural Society was held on Saturday, and while not large, contained some very interesting displays.

For 25 white carnations M. A. Patten was awarded the first prize; Backer & Co. second and third. Light pink—First, M. A. Patten; second, S. J. Goddard; third, M. A. Patten. Daybreak shade of pink—First, S. J. Goddard; second, M. A. Patten. Dark pink—First, S. J. Goddard; second and third, M. A. Patten. Scarlet—First, S. J. Goddard; second, M. A. Patten; third, Backer & Co. Striped—First, M. A. Patten; second, Backer & Co.

Robert Cameron of the Harvard Botanical Gardens was the speaker at the lecture course of the Horticultural Society on Saturday. There was a large attendance. Mr. Cameron was enthusiastically received and gave an interesting paper which created a wide interest and considerable discussion. The subject was "Annuals and Biennials," and the essayist gave a large list of varieties suitable for various conditions besides giving many valuable cultural hints. J. W. D.

LINCOLN, NEB.—The State Horticultural Society at its annual meeting elected the following officers for the ensuing year: Charles L. Saunders, Omaha, president; C. H. Green, Fremont, first vice-president; J. D. Ream, Broken Bow, second vice-president; Peter Youngers, Geneva, treasurer. L. M. Russell, secretary, holds his office until the June meeting of the society and his successor will be selected by the directors at that time. A. J. Brown, Geneva, whose term of office as director ended this year, was re-elected for a term of three years. The other directors are J. A. Yager, Fremont, and W. G. Swan, University Place; H. S. Harrison of York is the retiring president of the society.

Commercial Price
Violet Culture \$1.50
The Florists' Exchange, 2 to 8 Duane St., N. Y.

Toronto, Ont.

Business is again picking up, and with bulbous stock coming in plentifully there is more brightness about the trade. Carnations are good and enough to go around, but with the improved demand appear to work off clean. Violets appear to be over plentiful and, last week, Victoria day, January 22, was a disappointing one to several of our retailers who had laid in a heavy stock; for, although the day was quite mild, but few violets were worn and large stocks were left over to be consigned to the ash barrel. Yellow narcissus are a little in oversupply, but I daresay the market for them will soon right itself, as they are so easily managed.

Eighteen days of the severest kind of investigation into the management of our City Park Department has brought out but little against the commissioner, except careless management of details; the evidence offered was mostly that of discharged or disgruntled employees; the expense and worry of the matter has been, however, so great that the commissioner, Mr. John Chambers, has agreed to resign. He has been in office for about 29 years, and has done splendid work for the city during that time. He is a thoroughly practical gardener, and, whatever his faults, the city is not likely to get another man who will do as good work for the money spent as he has done. He says that only his sickness and the great expense of the investigation made him send in his resignation. There are several after the job, from politicians to roustabouts, but so far as I hear no good gardeners have offered themselves.

Alonzo Watkins, for many years gardener at the Allan Gardens, died suddenly last night of heart disease.

CHARLESTON, S. C.—The Carolina Floral Company, 339 Ring street, is making extensive improvements in their store. The entire front of the building is now being remodeled; the old windows have been removed, and in their stead is one large, octagon-shaped display window. On each side of the window is a door of latest type. The base of the window is marble, as is the entire entrance. Following this, the entire interior will be remodeled and put in excellent condition, after which the firm will commence the building of a large greenhouse.

This company commenced business about four years ago, with J. Henry Stühr as president, who has given the business his best attention. The manager, Frank W. Kummer, is favorably known as an artist in the line of floral decorations and designs. To his able management is due a great deal of credit for the success that this company has attained.

MALDEN, MASS.—D. F. Roy, who for the past 19 years has had charge of the estate of the late E. S. Converse and for several years past has also been superintendent of Pine Banks Park and during the past year a park commissioner, will leave this city in the near future to be general superintendent of the vast estate of Colonel H. E. Converse. The Moorings, Marion, Mass., Mr. Roy is a popular horticulturist in this vicinity and leaves with the good wishes of a host of friends. J. W. D.

TRENTON, N. J.—The following officers have been elected by the New Jersey State Horticultural Society for the ensuing year: President, Elias S. Black, Little Silver; vice-president, Albert Repp, Glassboro; secretary, Howard G. Taylor, Riverton, and treasurer, George E. Decamp, Roseland.

Resolutions of thanks were adopted in behalf of the retiring secretary, Miss Mary E. Budd, Mount Holly. Miss Budd served as secretary for three years, following the death of her father, Henry I. Budd, who held the office for 13 years.

Resolutions were also adopted favoring more practical education in the public schools, particularly along the line of horticulture and agriculture.

The will of George Wainwright, nurseryman and florist, who died on December 31, 1907, at the age of 82 years, has been filed for probate. Mr. Wainwright leaves all his property to his children. No inventory has yet been made of his estate. John Wainwright and David A. Brown are named as the executors. The heirs are John Wainwright, Miss Rebecca Wainwright, Mrs. Alice A. Kemp, children, and Charles and George Wainwright, grandchildren.

Mr. Wainwright had been in business for 50 years and was very highly respected. He sold his property for building purposes last July.

BALTIMORE.—The past week showed increased activity in both cut flower and design work.

A number of Baltimore florists will attend the meeting and exhibition of the American Carnation Society in Washington, D. C.

Messrs. Olmsted, Carriere and Brunner, landscape architects, upon request have been here to inspect that part of the city east of the City Hall, to Center Market Space, and Jones' Falls, with a view of formulating plans for a civic center and boulevard. It is proposed to convert the stream into a boulevard by covering it for about two miles, from Baltimore street to North avenue; and the section on Fayette street between the City Hall and the Falls, with the present and proposed public buildings, will also be widened and beautified. C. L. S.

FARGO, N. D.—The North Dakota Horticultural Society, at its annual meeting, elected the following officers: President, C. B. Waldron, agricultural college; treasurer, Professor Thompson, state school of forestry, Bottineau; executive board, Clark Kelley, Devil's Lake; L. A. Ueland, Edgely; Oscar Will, Bismarck; E. W. Hazeltine, Grand Forks, and Mrs. Devine, Fargo.

DAYTON, O.—Business in cut flowers continues good, mostly for funeral work. Roses, carnations, hyacinths, narcissus, lily of the valley and daffodils are in fine shape and bring good prices. Plant trade is not as good as it might be.

One day last week I picked about a dozen dandelion blooms in my yard, but now we are having cold weather, with the sun nice and bright.

Visitors: Fred. Beerhorst, Holland; W. C. Johnson, Cambridge, O. H. H. R.

FIRES.

SIEMAN, TEX.—On January 14 a fire in the boiler room of the greenhouse of the Texas Nursery Company caused a loss of \$1,000.

Plant Culture

By GEORGE W. OLIVER

OF THE BUREAU OF PLANT INDUSTRY,
UNITED STATES DEPARTMENT OF AGRICULTURE
LATE PROPAGATOR TO THE
UNITED STATES BOTANIC GARDEN,
WASHINGTON, D. C. AND THE ROYAL
BOTANIC GARDEN, EDINBURGH

A Standard Work Written by Request of the Publishers of the Florists' Exchange

A WORKING hand book of every day practice for the Florist and Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experience of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines, and a chapter on miscellaneous subjects in connection with the above.

This reliable cultural book has been gotten up for use not ornament, therefore the price has been fixed at a figure within the reach of all, while it contains more real practical information for those for whom it is intended than is found in much more pretentious works costing five, ten and twenty times as much money. Cloth; strongly bound to stand rough handling and plenty of it. Price, \$1.00, by mail, postpaid. Send for sample pages, free.

ANNOUNCEMENT
Our new seedling carnation TOREADOR will not be disseminated until January, 1909. For further particulars address THE H. WEBER & SONS CO., OAKLAND, MD.

NEW CRIMSON CARNATION
HARVARD

The color of this novelty is a very rich crimson. The blooms are of the finest as to size and quality and the habit is free and continuous, every shoot producing a flower with a calyx which we guarantee as non-bursting. Blooms borne on long, wiry stems from 24 to 30 inches and over. Price \$12.00 per 100, \$100.00 per 1000. Usual discount on large quantities.

New Carnation FAUST (BRILLIANT SCARLET) This novelty very fine for commercial use, owing to its extreme ductiveness; a fine one for Christmas trade. Color, form, stems, habit and productiveness all that can be desired. Price \$6.00 per 100, \$50.00 per 1000. Usual discount on large orders.

Mr. J. D. COCKCROFT, Northport, N. Y.

Dear Sir:—We desire to congratulate you on the two varieties of Carnations, GEORGIA and HARVARD, which you have been sending us. Georgia we consider to be the best white carnation that comes to New York, and can easily sell from 50% to 100% more than regular white. Harvard we think to be the best dark red coming here, easier to sell at double the price of any other dark red. With kindest regards, we remain,
Yours truly,

JACOB KOL, East Nutley, N. J.

VICTORIA

NEW SEEDLING, crossed by Lawson and Harry Fenn, the color of Lawson and the long stem of Harry Fenn; it is more prolific than either. Lawson is past. Victoria is better than Lawson ever was, and gave us last Winter from 20 to 95 per cent, more blooms each month. It is very healthy and a nice grower. I have two houses of it, and it is a sight to see the buds and blooms. It brings more money in the market than Lawson. Read below what J. A. Budlong & Sons Company of Auburn, R. I., say of it. They are growing it this Winter. J. A. Budlong & Sons Company are one of the largest market gardeners in New England, also the largest rose and carnation growers in Rhode Island.

December 10, 1907.
Mr. J. H. Cushing, Quidnick, R. I.
Dear Sir: We have 175 plants of your new seedling Victoria carnation which we planted in house the last of July. They

have made fine plants and we think now will produce as many flowers, if not more, than any carnation we ever grew. The stems are stiff and good length. The flower is also a good keeper.

We have sold these flowers in several instances to some of our best trade in Boston, who thought they were a long-stemmed Lawson.

Up to date, we have cut 4768 flowers from the 1175 plants, and there are as many buds in sight to-day as there have been any time since we started to cut. In other words, the cut has been very uniform and looks as if it would continue so throughout the Winter.

We do not think that you will make any mistake by putting this carnation on the market.

Yours truly,
THE J. A. BUDLONG & SONS CO.
Price of Victoria rooted cuttings, \$75.00 per 1000; \$8.00 per 100; 250 at 1000 rate.

WHOLESALE MARKET
For Flowering and Decorative Plants
OF THE
New York and New Jersey Association
of Plant Growers
43 West 27th Street, NEW YORK CITY

CYCLAMEN CANADIAN NEWS
EDMONTON, ALBERTA.—The past Christmas trade was as successful as could be expected; many more orders were received than last year, but they were invariably smaller in amount. About \$2 would be the average of the Christmas orders. Roses were in short supply; carnations were fairly plentiful, and chrysanthemums equal to the demand. In plants azaleas were good, but proved slow sellers. Cyclamen, primroses and Roman hyacinths were the favorites. Baskets went slowly this year.
Business has been and is fairly good, but a large proportion is credit, for Edmonton is no exception to the rule in the scarcity of ready cash.
This has been an exceptionally mild Winter; the weather has probably been the most pleasant I have experienced since I have been in the country. We have had a great many sunny days, but being so far north this does not amount to as much as would be generally supposed. Although the sun is above the horizon for about six hours on the shortest day, it keeps so low down that to all practical purposes it is continuous shade, except to the front house of the block. Bulbs are now coming on fine; Golden Spur narcissus being especially good at present.
FRED BENNETT
TORONTO, CAN.—Business, although not as good as last year at this time, is still better than some of us expected. There is not nearly so much entertaining going on, but stock is not over-plentiful, excepting in a few lines. Violets and cactuses are a little in over-supply and are offered rather low, but other stock is firm. Bulbous flowers are coming in more freely. Roses and carnations are selling well, but few being left over.
The failure of A. E. Jennings a few days ago was a bad one. The bank had secured the book debts, and as there was considerable rent owing, the landlord got the stock—the growers got the fun. Several of them got hit hard, but take it quite philosophically.
The Dutch invasion has set in; J. H. Hockmann, representing C. Petrick and others, and W. Taat, representing K. J. Kuyk, were in St. Lawrence market on Saturday last.
THOS. MANTON.

JERSEY CITY, N. J.—The Journal of January 21, 1908, contains a portrait and a sketch of the career of Alexander Bogie, who for upward of fifty years has grown flowers on a little plot of ground on the edge of the old Pennsylvania Railroad cut at Summit avenue. Although 86 years old, he is almost as active as ever.
Mr. Bogie is now, perhaps, the oldest resident of lower Hudson City. He was born in Dumfries, Scotland, and it was there that he learned gardening. When quite a young man he enlisted in the Queen's Guards. He fell from his horse one day and had both his legs broken. That was the end of his career as a soldier.
About the time he recovered diamonds were being discovered in Australia. Possessing an adventurous spirit, he decided to look for diamonds. He met with fair success, but he didn't care much for the country. It was somewhere about the year 1840 when news reached him that gold had been discovered in California. He promptly sold out his diamond claim and sailed for California. Unfortunately his success as a hunter of gold was not great. He gave up looking for the yellow metal after a time and journeyed to New York, in which city he had been told a fortune was easily acquired. When he arrived in New York he made the discovery that it was necessary for him to go to work if he cared to have enough to eat. So he hired himself out as a gardener. A few years later he went to Jersey City and engaged in the florist business on Lexington avenue. After remaining there about ten years he located on Summit avenue. His specialties are camellias and cacti.

STOUC CITY, IA. The establishment of J. R. Elder, 410 Pierce street, was burglarized recently and about \$1000 in cash and checks stolen. The thief is in custody.

Cleveland. The dark weather and low temperature have somewhat reduced the quantity of roses and also the quality, but the prices remain as usual. Carnations are still plentiful, and bring from \$3 to \$5 per 100. Bulbous stock is coming in better; tulips seem especially fine this season. Callas and Harrisii lilies are rather scarce yet. Violets, Paper White narcissus and Roman hyacinths are plentiful. There is still a demand for stevia, but it is nearly all gone. George Bate, treasurer of the Cleveland Cut Flower Company, gave a stag affair at his home. Among those present were P. R. Williams, George Herbert, Guy Bate, Herman Knohle, West Side florist; John Kirchner, Charles Bramley and Charles Hanna. All were unanimous in declaring they had a good time. Herman Bate, vice-president of the Cleveland Cut Flower Company and assistant foreman of the P. R. Williams Company, visited Cleveland Saturday and was initiated into the mysteries of "Medicine Ball." Since the Cleveland Cut Flower Company, sales agents for white violets, have been receiving shipments, these flowers are becoming more popular, and deservedly so; they are a beautiful novelty, even if they do lack the fragrance of the purple violet. Mrs. A. L. Brown, formerly with Smith & Fetters, is doing decorations now on her own account. She aims to make them unique and different from others and succeeds very well. Gasser Company are cutting some fine roses. Miss Lulu Schmidt, for so long a time bookkeeper for Smith & Fetters, will be married to James Moore sometime in February, possibly St. Valentine's night. George and Herbert Bate are in Washington. W. E. Davey, of New York, styling himself the "tree physician," is in Cleveland taking care of trees on private grounds; his method of killing the insects is to cover the tree with a large tent and fumigate. O. G.

abandon the idea of holding a flower show for the public.

Theodore Mitchell entertained about twenty club members at his steadily improving establishment with a steak and mushroom supper, moistened up with ginger ale the kind that has the foam on top.

Some useful comparison may be made when considering the product of John Breimeyer's Sons, Mack avenue establishment, which consists of 10,000 square feet of glass. This plant is used principally for forcing and growing of pot plants, as also for storing the many decorative plants needed.

FRANK DANZER.

Indianapolis.

More encouraging reports are received from the retailers than for some weeks previous. Liberal orders for funeral work remove much of the apprehension in the horizon. Counter trade, too, is enlivened at times with a bunch of orders for select stock.

The sale of potted plants is many times an inspiration, as frequently they are given more in favor than cut stock. Tomlinson Hall Market growers are jubilant over the installation of a new lighting system which shows their goods to better advantage.

News Notes.

A. F. J. Baur and Mr. and Mrs. John Bertermann were the only delegates to the Washington convention.

Herman Junge and Carl Sonnen-schmidt visited the New Castle growers this week.

L. N. Weyandt has an excellent crop of Blanche Ferry sweet peas.

M. A. Hitz is preparing to add to his range of glass when the season opens.

The miners' convention in this city the past week aided the retailers perceptibly.

Visitors: Mr. and Mrs. Henry J. Moorman, Cincinnati; E. Lautenschlager, Chicago.

were John Young, F. H. Trendly, A. J. Guttman, E. Dailledonze and J. W. Reimels. Mr. Alex. Wallace, editor of The Florists' Exchange, left at midnight on Monday, and A. H. Langjahr left on Tuesday afternoon by the Congressional Limited.

The Greek-American Retail Florists' and Growers' Association have leased the parlor floor at 118 Lexington avenue, southwest corner of Twenty-eighth street, for offices and meeting rooms of the organization.

Detroit.

Counter trade is satisfactory, a good supply of bulbous stock, such as tulips, freesias, daffodils and jonquils, stimulating the call for Spring flowers.

The city conservatories have an elegant display of cineraria, some 800 plants grown from seed of their own selection. Mr. Unger, the horticulturist in charge, has been very successful in crossing C. fimbriata x C. stellata, and the flowers are justly admired by all visitors.

The Detroit Florists' Club decided to

St. Louis.

News Notes.

We had with us the past week Martin Renkauf, representing H. Bayersdorfer & Co. of Philadelphia. Martin reports an extra good business trip in all florists' supplies.

Superintendent H. C. Irish of the Missouri Botanical Garden spent the past week in Chicago, attending the meeting of the Council of Horticulture, of which he is secretary. Mr. Irish met many old friends and had a pleasant visit.

J. J. Beneke was, the past week, elected a member of the Executive Board of the Supreme Council Legion of Honor, and was presented with a beautiful past chancellor's badge by the Council members. Mr. Beneke reports that he furnished the American Beauty decorations at the valley dance of the Royal Arcanum the past week.

Frank Fillmore, the past year regent of his Royal Arcanum lodge, was presented with a past regent's ring, which is a token for good work during the year.

E. W. Guy of Belleville, Ill., called on Saturday last, buying florists' supplies, and reports everything serene in his 'burg. He will bring all the Belleville florists over to attend the next club meeting.

A. S. Halsted of Belleville was also a caller, and reports that he will show his new pink carnation at the club's carnation show this month; he thinks he has something better than Aristocrat.

Messrs. Walbart, Ayers and Newman report a very busy week in their cut flower department, especially so on Friday last, for the high school graduating class. George Walbart furnished the decorations.

Our old friend, Carew Sanders, the oldest florist in the city, came downtown visiting the trade the past week. Mr. Sanders is now eighty years of age, still walks with a steady step and carries his age well, for which he was congratulated by his many friends.

President W. C. Young, of the Florists' Club, says that the next meeting of the club, which takes place on Thursday afternoon, February 13, at 2 o'clock, should be a banner one, as all the local growers have promised to exhibit a fine lot of carnations, also a large exhibition of new varieties will be sent from outside growers. This should be a boom to our local growers for inspection. The trustees have provided for refreshments and cigars after the meeting.

The St. Louis Horticultural Society held its annual meeting Thursday night, January 21, in the Masonic Temple Building. The attendance was not as large as was expected. The main object of this meeting was the election of officers to serve for the year 1908; this resulted in the re-election of the old officers. These were: Edward W. Mallineroff, president; the four vice-presidents, Leonard Matthews, Alexander Walbart, J. B. Gazzam and J. H. Gundlach; treasurer, F. C. Weber, and secretary, O. G. Koenig. The executive board heretofore consisted of ten members; one was added, making eleven. They are: Harry Young, chairman; F. W. Brockman, C. B. Nicholson, C. C. Sanders, Theo. Miller, Ernst Schray, F. H. Meinhardt, A. Meyer, Jr., F. C. Weber, A. Jablonsky and O. G. Koenig. It is said that the chairman of this board will call a meeting and determine on a Spring flower show for the month of March, which was a great social success last year.

News Notes.

George Knobloch and Louis Buchner have formed a partnership and purchased two of the greenhouses and part of the stock of plants from James A. Newsham at his Nashville avenue place, and will continue the business lately carried on by him. Mr. Newsham will now devote the whole of his time and energies to the Magnolia Nursery, lately acquired by him from C. Holst and his partner. Mr. Buchner was at one time foreman for U. J. Virgin, but until recently with the Metairie Ridge Nursery Company.

Mr. Rutherford, manager of the Metairie Ridge Nursery Company's store on Carondelet street, has severed his connection with that firm, and is now with Frank Reitt, corner of St. Andrew and Camp streets.

A. Alost, the Gentilly avenue florist, is building three new greenhouses, 100x20, to be devoted entirely to the growing of cut flowers. This firm is still cutting fine chrysanthemum flowers.

So far this Winter there has been no out-of-door sweet peas, owing to the unusually wet weather we have been getting, which kept the vines growing very rank, but appearances are promising for fine crops later in the season. CRESCENT CITY.

Philadelphia.

We cannot report anything of great importance this week. Business conditions are about the same; in the cut flower line there is still more stock than demands are using up. Prices are unchanged from last week, except that some sellers become desperate and won't refuse a sale at any reasonable figure. Economy seems to be the watchword with all. Both stores and commission houses are going along with as little help as possible; one house, in fact, said they would have been in pocket if they had closed up last August, and, from present indications, we are up against a quiet time until Easter. There is not one fashionable ball booked in this city for February and while these functions do not use a large lot of flowers, they are always preceded by many dinners which use quantities of the best flowers.

Hugh Graham Co. are cutting some grand sprays of *Arceia pubescens* which, so far, are in good demand.

Messrs. Quinlan, of Syracuse, N. Y., and Ford of Ford Bros., New York City, were in town this week.

Habermehl's Sons had the decoration for the Midwinter ball at Horticultural Hall on Friday last. DAVID RUST.

Kroeschell Boilers are SAFE, DURABLE, ECONOMICAL

During Seasons 1906-1907 the Kroeschell Hot Water Boilers were Installed to Heat 4,286,000 Square Feet of Glass

"The Only Perfect Hot Water Boiler"

DAMM BROS., Chicago, Ill., write: "In 1894 we bought one of your No. 12 boilers to take the place of four smaller boilers of another make. Your Boiler has done the entire work to the highest satisfaction, saving labor and about one-third of the fuel we used to burn before. We had that boiler up to 1906—that is 12 years—having no repairs on it whatever, except one set of flues we put in in 1900. Last fall we installed one of your No. 14 Boilers, having enlarged our plant. It takes care of 35,000 square feet of glass very easy. When firing we keep the ash door open only about one inch. We think your No. 14 Boiler could carry 40,000 square feet of glass."

HITCHINGS & Co.

1170 BROADWAY, NEW YORK

WILLIAM H. LUTTON
HORTICULTURAL ARCHITECT AND BUILDER
 WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
 JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

And then there is the cost to be considered. Why not let us take up this important question now?

New Bedford, Mass.

Trade the past week has been rather dull; even funeral work has been slow. A good supply of flowers is now coming in. Carnations bring 60c. to 75c. per dozen, retail; roses, 82 per dozen, retail. The last few days saw a marked demand for violets; for two weeks past they have been a drug on the market, but are now selling at \$1 per 100, retail. Sweet peas are coming in in moderate supply; they retail at \$1 per 100. There is a good supply of Paper White narcissus coming in; these sell at 60c. per dozen, retail. A few tulips and daffodils are to be seen; they retail at 60c. per dozen.

E. H. Chamberlain had some nice pans of Dutch hyacinths the past week; he is also receiving some fine Winsor carnations.

R. E. Nofftz had a fine window display last Saturday.

Wm. E. Mosher is cutting some fine Princess of Wales violets.

S. S. Peckham is putting large batches of cuttings in the sand. He is sending out fine Winsor and White Enchantment cuttings.

H. A. Jahn is still busy shipping cuttings of his new Lloyd carnation; this is a winner and a bread and butter variety.

Last Friday this city was visited by a blizzard, the most severe one in three years; no great damage is reported by the florists.

Boston.

The February meeting of the Gardeners and Florists' Club should be one of unusual interest. It will be carnation night and there will be present several prominent growers from a distance, who will take part in the discussion, and many of the club members who are this week attending the Carnation Convention in Washington will tell of their experiences.

William Turner, of Oceanic, N. J. will be the speaker at the meeting of the Massachusetts Horticultural Society on Saturday, February 8. Vegetable growing under glass will be the subject.

GLASS

We are glad to quote on whatever you need from 5 boxes to 5,000 boxes; East or West. Don't fail to get our advice and prices.

D. F. Roy, of Malden, has resigned his present position and will at an early date become general superintendent for Col. H. E. Converse at Marion. Mr. Roy is well known in this locality, having exhibited many well grown plants at several of the Boston shows; he enters on his new duties with the good wishes of a host of friends.

H. M. Robinson & Co. are handling large quantities of boxwood this season, the quality being very fine.

The North Shore Horticultural Society held their annual dinner on Wednesday night; it proved, as in former years, one of their important events. Quite a few well-known Boston club members attended.

Wm. Sim is having an extra fine cut of violets at present, the blooms of his new variety Boston being superb.

Welch Bros. are pushing the new white carnation, White Fair Maid, which, like the parent, is an excellent commercial variety.

Whether You Grow Carnations

or cut flowers of any kind it is absolutely essential that you have the right kind of a house to grow them in. If you want to get the perfect house and want to know how much it will cost the first thing you want to do is to write us for one of our catalogs. The book has 96 pages of interesting matter and after looking it over you can decide on the house you like, writing us on the blank sheet prepared for the purpose, and we will give you an estimate on it. We will also criticise your plan and tell you the changes to make in it if you request us to do so.

We furnish materials all ready to set in place with all the fittings done in our factory and give you complete plans telling just how to put the house together, also supply complete printed instructions so that you will be sure to get everything in its right place and have a perfect house.

During the forty years we have been making material we have learned a few things about greenhouses and if you are not now our customer, you should be. There is no argument to it—we know this business from A to Z and we'll guarantee everything we furnish you to be absolutely the best that can be made at any price.

Don't put it off another day, but send now for our catalog and let us have a talk about your plans for this year.

A SUCCESSFUL METHOD OF GREENHOUSE BUYING

You send your order for certain cypress parts of your house to one firm just because they say: "that's all they make, and ought to know how to make it."

You buy other parts from another concern; fittings from still another, shopping about with half a dozen or more firms, and then to cap the climax, go to your local hardware man for the paint and putty.

At once your troubles begin—one order comes and another doesn't; others come straggling along and you have no end of correspondence with all these different firms, each doing business in a different way. Finally, when at last everything is on the ground, ready for erection, you have a grand mixture, each lot fairly good in itself, but being made by different firms, there is no uniformity, no relation one part to another, and things won't go together the way materials do that are all turned out by one concern, with the one idea, of making that one house of yours the best possible. So this matter of placing your order all with one concern is economy for you.

There is a great deal to be gained by going direct to a concern and making them familiar with all your purposes, then they will be in a position to give you of the best of their experience in the way of a practical lay out and the materials best suited to your special requirements. Send us any order for anything, from glazing nails to a full fledged Iron Frame House.

Then there is another side to it—why not be an important, well-known customer of one concern?

Remember that we make every part of a greenhouse but the glass. We sell any part.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 6

NEW YORK AND CHICAGO, FEBRUARY 8, 1908

One Dollar Per Year

Winsor and White Enchantress

**Strong Rooted Cuttings
Now Ready for Delivery**

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere, and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. Order early, while we can promise immediate delivery, and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6.00 per 100, \$50.00 per 1,000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60.00 per 1,000.

Strong established pot-grown plants, \$9.00 per 100, \$75.00 per 1,000.

GREGORY'S SEED CATALOGUE FOR 1908

We catalogue this season several choice new vegetable varieties of sterling merit.

EARLY MORN PEA, the earliest, largest podded pea known. One farmer harvested 50 bushels from one planted and received from \$3 to \$3.50 per bushel. Quality of the best.

GREGORY'S EARLY EXCELSIOR, the best second early low growing pea without any exception. A great favorite with the leading gardeners.

"**Big Cop**," our new white potato, out yields all the well-known varieties, is less affected by rot, is deliciously meal-y. Let us tell you all about it. Catalogue free.

N. Waffle**, three packages plants.

SEED LEGISLATION IN OHIO. Several seed dealers in this State are becoming somewhat anxious regarding the bill now before the Ohio legislature which will control the sale of clover seed, by compelling the dealer to label the seeds as to whether they are medium or mammoth. Ohio is said to be the largest clover seed producer in the world, and such a law would only hinder business in this State, while it would mean much in gain to other States. Seed Inspector Wallace of Ohio says it is almost impossible to guarantee which class exists after they have been re-cleaned, and he predicts much loss to seed dealers in this State if the bill becomes a law. Several of the dealers have combined on the matter and will take it up with the local representatives.

Seed Trade Notes.

The advent of real Winter weather has acted as a temporary check to the very large number of orders, both wholesale and retail, that our seed-men have been receiving ever since immediately after the distribution of their catalogues. There can be no question that a very much larger and more profitable business than is usual has been done during the first month of 1908.

This is one of the years when the larger dealers are receiving such insignificant returns from their seed contracts with the growers that on all sides much fault finding is heard. Of course it is only human nature to hate to deliver, let us say, Stowell's Evergreen sweet corn, for a fourth or fifth of its present market value, and no doubt the claims of the retailers that some growers deliver just as little as they can in a year like this, and sell the rest at market rates, is to a great extent true. Seed contracting under our present system, works very well in an average season, with average seed crops; but in a season of extremes, whether the returns are very great surprises, or crop failures, dissatisfaction is at once very apparent with both grower and dealer. In a year of enormous seed crop surpluses, the grower fills his contracts to the full limit, upon a customer, who only takes the goods because he must. In a year of universal seed crop failures, the customer insists that the grower give up every seed he has harvested the two extremes. Let us hope that some day a fairer method to all concerned will be established.

FORMOSA LILIUM LONGIFLORUM

Ends the Growers' Trouble.—
Absolutely Free from Disease.

The Burpee Sweet Pea Trophy.

Our illustration represents the trophy offered by W. Atlee Burpee & Company, Philadelphia, Pa., for competition at the forthcoming show of the National Sweet Pea Society of England, in the class for "waved sweet peas." The cup weighs 50 ounces and is sterling silver, valued at fifteen guineas. There is a small netting inside so that the flowers can be nicely arranged, and a very nice black ebony stand. Representations of sweet peas are embossed on both sides of the cup, which is a work of art.

Plant Notes.

GLOXINIAS FROM SEED. Good results are so easily attained with gloxinias from seed that it is a wonder that they are not more generally grown, where use could be made of them, than they are. Seed should be sown early in this month in shallow, well-drained boxes or pans, half filled with a compost of peat, leaf mold and sand, or leaf mold and sand. The top portion should be finely sifted and the seeds scattered thinly over the even surface, merely pressing them down with a smooth board and then covering them with glass and sheets of paper and keeping them covered until germination, but, of course, taking care that they have previously been getting watered with a watering pot and fine rose. When the seedlings are fit to be handled easily, they should be pricked into other pans or flats containing soil similar to that out of which they are taken, but with the beneficial addition of a little loam. The plants thus transplanted should be placed near the glass to prevent them getting drawn. The little plants may be put into very small pots out of the seed pans; whichever method is practiced, great care is necessary in watering to keep them from damping off. As the plants grow and fill their pots with roots, they should be shifted into larger ones until they are in their flowering pots; 6-inch pots are suitable for finely grown plants.

The soil for the plants after removal from the second size pots should be made richer by the addition to the compost of a larger quantity of fibrous loam and relatively of the other component parts. In a greenhouse, the plants should be shaded from the direct sunlight and when, as is sometimes done, they are placed in frames outdoors when the temperature is suitable, they should be shaded also.

The plants will retain their foliage more surely intact if watering is always done from the spout of a watering pot and on to the soil instead of on the foliage.

TUBEROUS-ROOTED BEGONIAS FOR POT CULTURE AND CUT FLOWERS.—Tuberous begonias are slowly but surely regaining lost ground, both as fit subjects for attractive outdoor display in suitable situations and as plants well adapted for decorations of various forms.

These plants make beautiful specimens when grown right along from the latter part of February, or early March, in the greenhouse. If it is desirable to have plants that will bloom early, it will be well to procure tubers, and at the proper time start them into growth in shallow boxes, two-thirds filled with sandy soil, covering the tubers with the same soil, or with soil containing more sand, in order to prevent rotting in case more water than is good for the tubers will reach them. When the tubers have started well into growth, they should be immediately put into the pots wherein they are intended to flower, using for soil a compost containing good fibrous loam broken up (and sifted) two parts, well rotted manure

one part, with a good sprinkling of clear sand and leaf mold added. After the plants are fairly started a moderately cool temperature helps them to get fully developed. They require an abundant supply of water and, during their final stages of development will be benefited by an occasional application of liquid manure. A light shading material should be provided and placed so as to protect the plants from the direct rays of the sun during the heat of the day, the same to be removed in the afternoon.

Nicely flowered tuberous begonias are used very acceptably for dinner table decorations, leaving the plants in the pots; or, when that method is not desirable or practicable, the plants are taken out of the pots, and all or part of the soil shaken away, then the roots, and perhaps more of the plants, are embedded in whatever the foundation of the decoration is composed of; or the plant thus relieved of soil is inserted in some suit-

of temperature and other conditions; nevertheless, they will, with care, stand a change in conditions fairly well. About the beginning of March, the tubers desired for early development should be procured and got ready for starting into growth, and that is best accomplished by placing the tubers on even surfaces of moss, in shallow boxes, and then merely covering them with chopped moss, but it is important that they should be covered so that root action will be facilitated, because the roots proceed from the upper portion of the tuber. The flats containing the tubers should be placed in a house where the temperature does not fall below 70 degrees.

When the tubers have emitted a lot of roots, the plants should be potted in small pots (the size depending, of course, on the relative size of the tubers); the pots for the plants in all stages of growth should be well drained. For the first potting

The Burpee Trophy.

To be offered for competition at the Annual Exhibition of the National Sweet Pea Society, England, for Waved Sweet Peas.

able receptacle. The plants so used are, of course, of no further use.

Better, perhaps, than growing the plants in a greenhouse, is that of growing them in frames outdoors during the Summer, when the object is cut flowers and no more. When growing them in frames, good rich soil and careful attention to watering and providing them with shade, made of laths or some other equally suitable material, are all the necessary conditions to insure success.

To some minds and tastes, the double tuberous begonias are more pleasing than the singles; and, then again, there are others highly demonstrative in commending for pot culture the fringed or frilled type.

CALADIUMS.—Caladiums, but more particularly those known as fancy leaved caladiums, are among the most beautiful foliage plants in cultivation, and they are, in consequence, grown in large numbers and made use of in various forms of decoration indoors and out. The peculiar form and rich, varied colors of caladiums give characteristics almost exclusively their own. They are not only well adapted for massing of themselves, but are also peculiarly well fitted for use along with many kinds of ferns, especially *Adiantum cuneatum* and *Ferlyense*; a decoration well and tastefully done of caladiums and *Adiantum Ferlyense* is a sight not forgotten hurriedly. Caladiums are comparatively easily grown, but it must be remembered that they are always rather tender as regards usage, and particularly so when in pots, moving about from one place to another, with the inevitable changes

leaf mold and sand suits them best. The plants after potting will proceed to grow quickly and very soon will need more pot room; then the compost should be good fibrous loam two parts and one part leaf mold, with the addition of a good sprinkling of sand, and, if peat is at hand, throw in a little of that, too. The plants should be placed near the glass, otherwise they will get drawn up and weakly; a frame inside the house is advantageous. The plants thrive in a moist atmosphere and in a warm temperature; and, consequently, they should be hardened a little when wanted for decoration, necessitating their removal to a much lower temperature.

The plants before being thoroughly at work with their roots in the soil should be carefully and rather sparingly watered, but when once well established, they require an abundance of water. Caladiums are multiplied in the most practical way by the division of the tubers when they have just put out roots and made young growths; these may be severed from the parent, and then potted up as previously directed.

NEPHROLEPIS.—Retail florists should not fail to grow one or more of the improved forms of the Boston fern. There are quite a number of these now and from out of a number of the latest introductions it is no easy matter to pick the best and that mainly because they are all good and well worth growing. There may be some florists so placed or located that they imagine there is no market for such plants, in country towns, for instance. But I have yet failed to come across

any one who was not able to create a market for well-grown specimens of these beautiful ferns, or perhaps I would be more correct in saying that they, the plants, made a market for themselves. Small plants in 3 or 3½-inch pots, procured early in Spring, of such varieties as Whitman, superbissima, Amerpohl or toledoides will, by the time the greatest demand is likely to exist for such plants, be in good salable condition. There are two methods of growing these plants, just as previously was practiced with the old Boston—they were and are grown right along and kept shifted from one size pot to another, or planted when small in the soil in benches, then lifted and potted in time to be established before selling.

As far as the growth of the plants is concerned, the planting-out method is perhaps the best; but I am still of the opinion that more lasting and shapelier specimens result from continuous and uninterrupted pot culture. When, however, the object is the rapid multiplication of stock, the planting-out method is the only one to be considered.

The idea years ago was prevalent that nephrolepis could not be successfully grown unless the glass was well shaded, and there is no doubt that the unobstructed sunlight damaged mature specimens of Boston ferns. These newer types of nephrolepis will not succeed well under heavily shaded glass; in fact, clear glass is much nearer what they want when Fall approaches, and more emphatically during the dead of Winter. There is a great deal depending on the nature of the soil used for these ferns, as there is with most everything else. I have used soil composed of various ingredients, but the best plants I have yet grown were potted in good fibrous loam, not very old either, with just a little sand thrown in. I found that by using leaf mold or decayed manure, or both, that while growth seemed to be, as it undoubtedly was, stimulated thereby, it was softer, and as a result of less endurance than that produced from the more substantial food contained in good turf from the old pasture field. D. M.

DREER DAHLIAS

We can still furnish in strong undivided field-grown roots the following varieties of Dahlias All of these are first-class sorts of their respective types and colors and strictly true to name.

Varieties specially suited for cut flower purposes are marked with an asterisk, *

CACTUS DAHLIAS

- *Abban. A large, long straight petalled pure white flower with creamy centre of unproved form \$2.50 15.00
- *Aegle. Rich, warm cardinal-red, with peculiarly twisted petals 1.00 8.00
- *Anos Perry. Flowers very large, with long, tubular petals. Color fiery red, one of the earliest and freest flowering. 2.50 15.00
- *Aquila. Tender mauve pink on the edges passing to a creamy white centre, a beautiful Dahlia of large size and excellent form 2.50 15.00
- *Al Helleberg. Fine orange-scarlet Arachne (The Spider Dahlia) White edged crimson with peculiarly twisted petals, very variable .85 6.00
- *Bessie Mitchell. A fine flower on stiff stems, apricot orange shading to a reddish centre 1.25 10.00
- *Coronation. Flowing red, a medium-sized flower of the form; splendid for cutting 2.50 15.00
- *Comet. Delicate lilac, pencilled, spotted and striped with tyrian rose 1.25 10.00
- *Carmen Sylva. Soft, rosy-carmine, shading lighter to the centre 1.25 10.00
- *Charm. Centre petals white-edged with pale yellow, the outer petals gradually changing to a light bluish edged with salmon 1.25 10.00
- *Clara G. Fredrick. A splendidly formed flower of very large size, color shrimp pink shading to salmon-red in centre 1.25 10.00
- *Capstan. Soft orange-scarlet, shaded apricot, remarkably free flowering 1.00 8.00
- *Cornucopia. Vermilion with carmine shadings, long, narrow petals 1.00 8.00
- *Dainty. Ground color lemon-yellow, shading to a soft, glowing gold rose with tip of yellow; truly dainty 1.25 10.00
- *Else. A charming variety, with a combination of delicate colors. The base of the petals is of buttercup-yellow, gradually passing to number, finished with a tip of tyrian rose 2.50 15.00
- *Earl of Pembroke. Bright plum color, a royal shade 1.00 8.00
- *Exquisite. Fine pure orange-scarlet with salmon shadings 1.00 8.00
- *Firebrand. Rich, glowing vermilion, shading deeper 1.00 8.00
- *F. A. Wellesly. Brilliant blood-red suffused with carmine 1.25 10.00
- *Floradora. A remarkably free-flowering, bright blood red 1.25 10.00
- *Florence M. Fredrick. Pure white, of large size and perfect form 1.25 10.00
- *Fruite. Peaches and cream describes the color of this beauty, a pleasing soft rose-pink passing to a cream centre 1.25 10.00
- *Freiligkeit. Rich glowing scarlet .85 6.00
- *Frau Hermine Marx. Beautiful La France pink, a fine cut flower 2.50 15.00
- *Flora. An ideal white Cactus Dahlia. A large, heavy flower, produced on stout, stiff stems, makes it valuable for cutting 2.50 15.00
- *Gabriel. Creamy white, edged with vermilion, an improvement on the "Spider Dahlia" Arachne 1.25 10.00
- *Gen. French. A good-sized flower of good form, of a pleasing terra-cotta 1.25 10.00
- *Galliard. Rich, glowing scarlet, with long, tubular petals 1.00 8.00
- *Gellert. Full, double, of fine form, scarlet, shading to ruby at base of petals 1.00 8.00
- *Gen. Buller. Cardinal red, each petal tipped with white 1.00 8.00
- *Gottelinde. Primrose-yellow, of fine form 1.00 8.00
- *Graf Waldersee. Delicate rose suffused with pink .85 6.00
- *Hans Sachs. Bright cherry red, .85 6.00
- *Harbor Light. Brilliant cochineal-red, with a stripe of reddish-apricot through the centre of each petal. The coloring is variable, sometimes the light, at others the dark color, predominating, but beautiful in either form 2.50 15.00
- *H. W. Sillem. A brilliant, rich, cardinal-red, with deeper shading, flowers of perfect form, and frequently measuring 7 inches in diameter 2.50 15.00
- *Hohenzollern. Rich bronzy orange-red, with gold sheen 1.00 8.00
- *Horn of Plenty. Deep carmine-purple; flowers large, long, narrow, twisted petals cleft on ends 1.00 8.00
- *Imperator. Large-sized flower of deep currant-red, with deeper shadings 2.50 15.00
- *Island Queen. Soft lavender pink .85 6.00
- *J. Bryant. Deep yellow at base, passing to pale yellow with reddish streaks .85 6.00
- *J. W. Wilkinson. Rich ruby of fine form .85 6.00
- *J. H. Jackson. Brilliant crimson-maroon; very free 1.25 10.00
- *Kingfisher. Carmine-purple, long, narrow petals and finely formed 1.25 10.00
- *Kienhillde. The most popular cut flower variety grown to-day; perfect flowers on long stems; color a brilliant pink, gradually shading to white at the centre 1.00 8.00
- *Landrath Dr. Schiff. A most pleasing shade of apricot suffused with rose 1.00 8.00
- *Lauretta. Base of petals deep amber-yellow, passing to apricot and old-rose on the edges; an attractive combination 2.50 15.00
- *Lenau. Ground color coral-red, suffused with apricot, shading to salmon-rose on the edges as the flower matures 2.50 15.00
- *Lady Edmund Talbot. Coral red with rosy shadings .85 6.00
- *Lodestone. Orange-scarlet, large and free 1.00 8.00
- *Minute West. Canary-yellow in centre, gradually shading to white at tips; a good, large flower 2.50 15.00
- *Magnificent. A pretty Dahlia, ground color capucine-lake, passing to salmon-rose at the tips 1.25 10.00
- *Mrs. H. L. Brousson. Large, perfect flowers of a delicate tint of salmon on a yellow ground 1.25 10.00
- *Mabel Talbot. Soft violet-rose with yellow shadings at the base of the petals 1.25 10.00
- *Mary Service. Apricot, shaded orange, shading to purplish-rose at the tips; a well-formed flower, and a free and continuous bloomer 1.00 8.00

- *Mrs. H. J. Jones. Very large, perfect, rich, bright scarlet with cream-edged edge, occasionally comes self-colored \$1.00 8.00
- *Mrs. Carter Page. Glowing deep carmine .85 6.00
- *Mrs. Moore. Fine deep claret .85 6.00
- *Mrs. Jewell. Brilliant reddish salmon .85 6.00
- *Oda. Rich crimson carmine, of fine form 1.00 8.00
- *Perey. Free-flowering, pure white .85 6.00
- *Rushe. Glowing crimson with purple shading .85 6.00
- *Reliable. A very large, bold, striking flower of a pleasing middle carmine, suffused with salmon and yellow 2.50 15.00
- *Ringdove. Salmon carmine centre with yellow shadings, passing to white on the edges; very variable but always pretty 1.00 8.00
- *Ruby. Deep vermilion centre, shading to ruby-red at the edge of the petals, a rich pleasing color 1.00 8.00
- *Ruckert. A superb flower of perfect form, a brilliant blood-red with darker shadings 1.00 8.00
- *Rakete. Rich glowing, fiery-red, of good form 1.25 10.00
- *Standard Bearer. Rich, fiery scarlet, very free, and of perfect form 1.25 10.00
- *Stern. A beautiful pure lemon yellow, very free and one of the best yellows for cutting 2.50 15.00
- *Shooting Star. (Stein schnuppe) Good-sized flowers, of regular form, produced on stout stems held well above the foliage. Color pure golden yellow, entirely distinct 2.50 15.00
- *Thuringia. Flowers very large, and always of good form, of a brilliant fiery-red color. A remarkably free bloomer 2.50 15.00
- *Theifuss. Brilliant geranium red 1.00 8.00

- *Bon Ton. Large, double, formed flower of 1.00 8.00
- *Chameleon. Large, double, formed flower of 1.00 8.00
- *Duchess of Cambridge. Rows of petals white suffused with evenly tipped dark markings 1.25 10.00
- *Emily. Very large, with white markings 1.25 10.00
- *Elegans. Large, rose, tipped white 1.25 10.00
- *Fern-Leafed Beauty. White, each petal edged with dark carmine-rose 1.25 10.00
- *Frank Smith. Large, purple in moon shading almost to black, each petal tipped with white. The most perfect long Dahlia 1.25 10.00
- *Fanny Purchase. A fine deep yellow 1.25 10.00
- *Grand Duke Alexis. Large, massive flowers, ivory white with a faint fringe of rose at the extremities of the petals 1.00 8.00
- *John Thorpe. Suffering rose, of perfect form 1.25 10.00
- *Keystone. Light rose, spotted and striped crimson 1.25 10.00
- *Miss Browning. Primrose yellow, tipped with white 1.25 10.00
- *Miss May Loomis. White, suffused with soft rose 1.25 10.00
- *Mrs. Stancombe. Straw yellow, suffused amber, striped red and mottled, and tipped blush 1.25 10.00
- *Olympia. Bright rose pink, striped, spotted and pencilled crimson 1.25 10.00
- *Queen Victoria. Handsome bright yellow, beautifully quilled 1.00 8.00
- *Queen of Yellows. Beautiful primrose yellow 1.25 10.00
- *Red Hussar. Pure cardinal red, perfect form 1.25 10.00
- *Ruth. Pure white with faint tint of bluish on edges 1.00 8.00
- *Striped Banner. Cardinal red striped white 1.25 10.00
- *Thos. Westcott. Fiery red, tipped white, very profuse 1.25 10.00

NEW PAEONY-FLOWERED DAHLIAS

This new type of Dahlias originated in Holland, and promises to become very popular. The artistic flowers are very large, from 6 to 8 inches across, and are best compared to the semi-double paeonies in general form. They all flower very freely, and are borne on long, strong stems, making excellent material for cutting, as well as for garden decoration.

- *Germania. Brilliant strawberry red, a very pretty, artistic flower, standing well above the foliage, producing a very gay effect. 25 cts. each; \$2.50 per doz.
- *Glory of Baum. Very large, loosely arranged flower of soft hortensia-rose color. 35 cts. each; \$3.50 per doz.
- *Queen Emma. A magnificent sort that appears almost artificial. It is of a charming shade of mallow or Hollyhock pink, the inner petals banded with gold. 25 cts. each; \$2.50 per doz.
- *Queen Wilhelmina. Immense, fluffy flower of pure white with yellow centre. 35 cts. each; \$3.50 per doz.

TWELVE CHOICE DOUBLE POMPON DAHLIAS

- *Alets Imperial. Creamy white, tipped analine red
- *Darkness. Deep velvety maroon.
- *Elegante. Soft pink, tipped deep pink; reflex light pink
- *Gold Bunchen. Pure primrose yellow.
- *Kleine Domitea. Orange buff; always in flower
- *Little Bessie. Creamy white, quilled petals.
- *Little Herman. Deep carmine, shaded garnet, tipped white
- *Little Naïad. White, tipped amaranth red.
- *Little Prince. Deep currant red, tipped white.
- *Lion Banner. Amber, heavily tipped crimson
- *Red Piper. Beautiful deep red of fine form.
- *Snowdahl. Unquestionably the finest white. 10 cts. each; \$1.00 per dozen; \$8.00 per 100. The set of 12 varieties for \$1.00

NEW CENTURY SINGLE DAHLIAS

These magnificent single varieties all originated from the celebrated Twentieth Century offered in this set. They are all of free branching habit, flowering early, profusely and continuously throughout the season, flowers from 4 to 6 inches across on stems 3 feet long, and when cut keep in good condition for many days.

- *Crimson Century. Rich, deep, velvety crimson, shaded maroon, with rose halo around a yellow disc. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
- *Maroon Century. Rich, velvety maroon with yellow disc. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.
- *Pink Century. Delicate soft pink, flower very large. 20 cts. each; \$2.00 per doz.; \$15.00 per 100.
- *Scarlet Century. Brilliant scarlet with golden disc. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.
- *Lavender Century. Delicate blue with light shadings, very pretty. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
- *Twentieth Century. Early in the season, intense rosy crimson, shading gradually to almost white on the edges and a light halo around the disc. As the season advances the flowers become lighter, changing to almost pure white suffused with soft pink, not variegated but blended in the most beautiful manner. 15 cts. each; \$1.25 per doz.; \$10.00 per 100. One each of the 6 varieties for \$1.00

STANDARD SINGLE DAHLIAS

- *Alba Superba. Fine large white, with a dash of canary yellow at base of petals. 15 cents each; \$1.25 per doz.; \$10.00 per 100
 - *Advancement. Fine deep ruby-red with rose halo and yellow centre
 - *Ami Barillet. Rich pure garnet, with fine dark foliage
 - *Blackbird. Black velvety maroon, with a bright red spot at the base of each petal.
 - *Fashion. Crimson-maroon with darker shadings.
 - *Gaillardia. Golden-yellow with a broad red band around a golden disc. 15 cts. ea. \$1.25 per doz.; \$10.00 per 100.
 - *Gracie. White, delicately suffused with blush and a primrose halo around the disc
 - *Mrs. Bowman. Suffering, a large showy flower.
 - *Polly Eccles. Pure apricot with yellow shadings, a halo of poppy red surrounding the Indian yellow disc
 - *St. George. A pretty primrose yellow of large size. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
 - *Striking. Deep garnet, each petal with a white spot on the tip
 - *Wildfire. Brilliant poppy-scarlet, of large size
- Price: Except where noted, 10 cts. each; \$1.00 per doz.; \$8.00 per 100
- One each of the 12 varieties for \$1.25
- We will furnish one each of the 151 varieties here listed, an interesting collection, for \$15.00.

- *Vesuvius. Buttercup yellow, striped and spotted with oriental red 1.25 10.00
 - *Victor von Scheffel. An ideal cut flower, of a soft pink, passing to white in the centre, very pleasing 1.25 10.00
 - *Volker. A charming free-flowering pure yellow 1.25 10.00
 - *Uncle Tom. Maroon with darker shadings, almost black 1.00 8.00
 - *Winsome. A fine white of good size and perfect form 1.00 8.00
 - *Zephyr. Crimson-carmine, intensified by bronzy shadings at the base of the petals; a fine large flower 1.00 8.00
- We will supply one each of the 78 varieties of Cactus Dahlias for \$7.50.

DECORATIVE DAHLIAS

- *Admiral Dewey. A rich French purple; very free 1.00 8.00
 - *Black Beauty. Deep velvety maroon, almost black 1.00 8.00
 - *Bronze Beauty. Bright coppery orange 1.00 8.00
 - *Catherine Duer. Iridescent geranium-red, a favorite at Newport, R. I., where it is used more extensively than any other variety for cutting 1.00 8.00
 - *Clifford W. Bruton. A fine bright yellow 1.00 8.00
 - *Fire-rain. Cardinal red. A fine cut flower 1.00 8.00
 - *Gigantea. A large creamy white 1.00 8.00
 - *Henry Patrick. A fine pure white 1.00 8.00
 - *Lyndhurst. Rich brilliant cardinal-red, a fine cut flower 1.00 8.00
 - *Marchioness of Bute. White tipped with rosy carmine 1.00 8.00
 - *Mrs. Roosevelt. Delicate silvery rose 2.00 15.00
 - *Oban. Rosy lavender, suffused and overlaid silvery fawn 1.00 8.00
 - *Souvenir de Gustave Dozson. The most sensational Dahlia of the season, a decorative variety of mammoth proportions which, under ordinary cultivation, will produce flowers 6 inches across and can be grown to measure full 9 inches. It is of free growth, remarkably profuse-flowering, and pure scarlet in color 3.50 25.00
 - *Sylvia. Soft, pleasing mauve-pink, gradually changing to white in the centre, a fine cut flower 1.00 8.00
 - *Wm. Agnew. Rich dazzling carmine red; a grand flower 1.00 8.00
 - *Zulu. Deep maroon with black shadings 1.00 8.00
- One each of the 16 varieties for \$1.75

SHOW AND FANCY DAHLIAS

- *A. D. Livoni. Beautiful clear pink 1 pet. 1.00 8.00
- *Arabella. Light sulphur yellow, shaded peach-blossom on edges; a fine flower 1.25 10.00

Judas Trees.

One of the Judas trees, either the native one, *Cercis canadensis*, or the Japanese, *C. japonica*, is wanted wherever a half dozen shrubs are to be planted. Judas trees bloom in early Spring when so many other trees and shrubs are in flower, but they are the only shrubs of all having pink flowers such as these well-known sorts bear. It is rather a misnomer to call them trees, for even in their wild condition they are usually seen in shrub form, though when in good soil and situation the native one will attain a height of 20 feet.

The Japanese one is more truly a shrub, rarely being seen over 10 to 12 feet, and always in a bushy form.

C. canadensis is wild over a great extent of country. It is found within the city limits of Philadelphia, and is abundant in the southern part of the State, the battlefield of Gettysburg containing a great many of them.

Of the two kinds, the Japanese is the better for general planting, especially as a shrub. Its flowers are much the brighter pink, and as already said, its growth is far bushier.

Recently a new one, a white variety of the native *canadensis*, has been added to the others, making in all a good combination.

When grown in a pot or tub the Japanese Judas tree makes a beautiful display, and as seen in a florist's window it attracts much attention. As it forces well and needs but a short time to bring it into flower, it would be worth more trials in this line than it has received. It is a bush that bears pruning well, and as its yearly flowering is assured, florists would do well to give it a good trial as a seller.

Purple-Leaved Plum, *P. Pissardi*.

The demand for the purple-leaved plum keeps up, nurserymen finding that it continues one of the items they have to carry a supply of right along. It is a good thing, useful where a dwarf tree with purple foliage is required, there being nothing else of just its character of growth that could be used. A good thing about it is its holding its foliage purple right through the Summer—something that but few purple shrubs and trees do. This is a good recommendation.

This plum is a variety of the myrobalan, the one generally used for budding all other sorts on, and, of course, the purple-leaved one is worked on it.

Surprise is sometimes expressed that fruit is so seldom seen on the purple plum. The reason is that it is usually planted by itself, and this plum is evidently one of many fruit trees which refuse to bear when no other trees are near it. Many apples, pears and like fruits will bear well only when some other one is near them, even if it be one of the same kind; and many flowering plants are of the same nature. The flowers of one tree have to fertilize those of the other.

When the *Prunus Pissardi* does bear, its fruit is a small, round red-colored one.

Hypericums.

The half shrubby nature of many hypericums has called for their use in many situations where partial shade exists and where something of the nature of these plants is wanted, such, for instance, as the borders of woods or under trees and like places. *Hypericum patulum*, *Moserianum* and *calycinum* are examples in this class; and wherever tried in the way indicated they have proved very satisfactory. Some of them are nearly half creeping, and when under trees which shed their leaves on them in Autumn, they are nearly evergreen, some quite so, where freezings of a severe nature do not occur.

Then how well the taller growing shrub sorts fit in with a lot of shrubs! Their general compact, upright growth and their handsome yellow blossoms—all have flowers of this color—contrast well with the blooms of other shrubs, for not many other yellow-flowered shrubs are blooming when the hypericums are, in Midsummer. *H. prolificum* has good sized yellow flowers, but not as large as those of *aureum*, which are particularly large and showy; and even our native one of familiar appearance in the southern part of New Jersey, the *H. densiflorum*, is worthy of a place in collections, for though its flowers are small they are quite numerous, it being well named *densiflorum*.

The half shrubby sorts of hypericums can be increased by division of the plants, as they increase by spreading, to some extent; but the shrub kinds

do not. The seeds of hypericum are of dust-like appearance, so that great care is required when attempting to grow them from seeds, but from green wood cuttings in Summer full success may be looked for.

The Carolina Rose.

For planting in wet places, our wild rose, *Rosa carolina*, is well fitted, for it is in such situations it is found in its wild state. Many roses would not grow at all where the carolina one flourishes, for as it is found in this part of the country it is in veritable swamps. There are many such places where a rose of this character would be most desirable.

The flowers of the carolina rose are single, pink, and with slight fragrance. A feature which prompts its planting in many instances is its pretty red seed pods, which taking on their color in Midsummer, adorn the bushes until Winter sets in.

Evergreen Privets for Pots.

There are two evergreen privets that could be grown by florists and nurserymen to advantage, chiefly for use in or about dwellings, the *Ligustrum japonicum* and *L. lucidum*. Both are true evergreens, and both equally as hardy as many other evergreens of the broad-leaved section now used for pots and tubs. Of the two, *L. japonicum* is the hardier, while *L. lucidum* has the handsomer foliage.

It would seem that the growing of these as a business looking for the sale of them in the way suggested would prove profitable for those in the South who would engage in it. Neither is quite hardy enough for general growing outdoors, north of Philadelphia. About Philadelphia hedges of the

same kind, the *lucidum*, are common, and if one of our florists, who sell, would take hold of the privilege, it would be a good look of them and grow them on for pot use in the North or for outdoor planting in the South, it is sure that no mistake would be made, for the plants would sell.

Dying Back of the Japan Ivy.

The dying of a branch, hood of the Japan ivy, *Ampelopsis Veitchii*, which is occasionally seen, has been occurring ever since the introduction of the vine, now many years ago. It is seldom that this ivy entirely dies, indeed the loss of a single branch is rather uncommon though it does occur. It is supposed to come from a fungous attack, and as several other Japanese introductions do the same thing it has been called "Japanese die-back."

When a good sized branch dies it is often better to cut the whole vine down to near the ground, that the whole growth may be uniform when it starts afresh, which it will do, if nothing kills the main part. Indeed, many of the very old plants would be the better for a cutting back, for in time, when old, the lower portions of the vine do not remain attached to the wall as they did when young; and a fresh growth from the base will appear much prettier.

Vines planted twenty years or more ago, as many have been, have branches that measure from 4 to 6 inches in diameter, hanging loose from the walls for quite a height from the ground.

Popularity of the Japanese Berberry.

Japanese berberry, or barberry, as so many call it, *Berberis Thunbergii*, is growing in popularity all the time. Whether as a hedge or as an ornamental

single plant, there are but few shrubs superior to it. Whether in Winter or in Summer it matters not, there are attractive features always. At this writing, January 30, the bushes of it are bright with scarlet berries; these are of just as good a scarlet color as before Winter set in, and they will remain so until the bushes are re-clothed with leaves in Spring. The red berries peek from among the new leaves in Spring, giving the impression they are red blossoms, as no one thinks of a bush bearing red berries so early in Spring, and so many cannot believe it as the old berries still in good condition.

Berberis Thunbergii makes a most beautiful hedge, and grows neat and hedge-like without any or with but the slightest trimming, and as its growth is twiggy instead of rampant it rarely gets taller than desired.

To keep pace with the increased call for plants, nurserymen sow great quantities of seeds. The berries are best gathered in late Fall, washed free of pulp and sown in the open ground at once. Should it be impossible to do this, gather the seeds whenever it can be done, wash them free of pulp and place them in a box of damp sand, sowing them the first chance in Spring. Place the box outdoors or in a cool storeroom for the Winter.

The increased calls for this shrub so noticeable the past few years are likely to continue indefinitely. The more it is planted the more its presence will attract others to its usefulness, and besides this, the desire to have one's place filled with beautiful trees and shrubs is more evident every day. Horticulture is on a higher plane to-day than it has ever been before.

THE ALASKA-YUKON-PACIFIC EXPOSITION will be held at Seattle, Wash., opening June 1 and closing October 15, 1909. The purpose of the exposition, which is to exploit Alaska and Yukon and the countries bordering on the Pacific Ocean, is receiving much favorable comment throughout the country.

TEXAS NURSERIES—The Commissioner of Agriculture has given out a statement containing a list of nurseries in Texas. The list shows a total of 200, which is a decrease of 12 from last year and a decrease of 6 for the previous year.

Berberis Thunbergii.

Grown by Peter Bisset, Twin Oaks, Washington, D. C.

L. japonicum have done well when in not over exposed places, and when in half protected spots it is never injured; and this one is quite hardy for propagating outdoors in that vicinity. *L. lucidum* is not fitted for zero weather; it will endure 10 to 20 degrees of frost, but taking Winters north of Washington it could not be classed as a hardy shrub. This is a pity, too, for it has a large, thick shining green leaf, beautiful to look upon, and when grown in a tub in a pyramidal shape, a prettier object in the same line could not be desired.

For use in hallways in Winter, outside a house in Summer, and wherever other evergreens in tubs are

NEW (MY MARYLAND) ROSE

Best up-to-date commercial rose. Read what others have to say about it:

Among the many new roses of the year, there is none which has impressed us more as being worthy of a thorough trial. It has been exhibited only as No. 294, being a seedling raised by John Cook of Baltimore—a beautiful rose with an exquisite fragrance. In color it may be described as a soft salmon pink, which brightens up beautifully as the bud opens. We are intending to plant this rose in quantity.

A. N. PIERSON, Cromwell, Conn.

In reply to your inquiry, what we think of your new rose "My Maryland," we would say that after seeing others we still believe that you have the best new rose of modern times.

GUIDE BROTHERS, Washington, D. C.

Price 2 and 2½ in. pots, \$25.00 per 100; \$200.00 per 1000; 3 in. pots, \$5.00 per dozen.

JOHN COOK, 318 N. Charles Street, BALTIMORE, MD.

FERNS MY SPECIALTY

I have an immense stock of assorted ferns for Jardinieres, healthy and bushy, none better, in 12 of the best market varieties, including *Cyrtium Falcatum*, *Aspidium Trussetense*, *Pteris Wimsetti* and *Mnyil*, in good proportion, from 2½ in. pots, \$3.00 per 100; \$25.00 per 1000; 500 at 1000 rate.

CENTER PLANTS (Exact Size)

- Kentia Belmoreana*, 2½ in., \$1.30 per doz., \$10.00 per 100.
- Assorted Ferns, 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
- Adiantum Cuneatum*, fine stock, 2½ in., \$3.50 per 100, \$30.00 per 1000; 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
- Adiantum Farleyense*, 4 in., \$4.75 per doz., \$35.00 per 100; 5 in., \$8.50 per doz., \$65.00 per 100, 6 in., \$12.00 per doz.
- Adiantum Graecillimum*, 2½ in., \$3.50 per 100, \$30.00 per 1000.
- Cibotium Schiedel*, 4 in., \$3.50 per doz., \$25.00 per 100.
- Nephrolepis Scottii*, 6 in., \$7.00 per doz., \$60.00 per 100; 8 in., \$15.00 per doz., worth the double.
- Elegantissima* and *Pieroni*, 6 in., \$5.50 per doz.
- Fern Spores, gathered from my own stock, guaranteed fresh, 1907 crop, good commercial varieties, 30c. per trade pkt.; \$3.00 per dozen.

J. F. ANDERSON, Short Hills, N. J.

FERNS For Jardinieres

Best varieties, strong, healthy plants from 2 1-4-inch pots, \$3.00 per 100; \$25.00 per 1000. 500 at 1000 rate 3-inch, \$5.00 per 100.

CIBOTIUM Schiedel, 6-in. pots, \$1.00 each.

NEPHROLEPIS Scottii, 7-in., 75c. and \$1.00 each; 9-in., \$1.50 and \$2.00 each.

FRANK N. ESKESEN, Main Street, Madison, N. J.

FERNS

BOSTON, 3 in. \$6.00; 4 in. \$12.50; 5 in. \$25.00; 6 in. \$40.00 per 100; 7 in. 90c. each.

PIERSONI, 3 in. \$6.00; 4 in. \$12.50 per 100

ASPARAGUS PLUMOSUS or SPRENGERI, 2 in. \$3.00; 3 in. \$6.00; 6 in. \$40.00 per 100.

Cash or C. O. D.

W. J. & M. S. VESEY, Fort Wayne, Ind.

NEPHROLEPIS

WHITMANI, 2½ in. \$5.00 per 100; 3½ in. \$25.00 per 100.

FERNS, Boston, 2½ in. \$3.00 per 100.

Henry H. Barrows & Son, Whitman, Mass.

FERNS

Boston, Scottii, 4 in. 15c.; 6 in. 40c. Some extra heavy Scottii at 50c. each. All pot grown.

Asparagus Plumosus, 2½ in., \$3.50 per 100

Kentia Belmoreana, 4 in. \$25.00 per 100

Standard varieties of carnation cuttings at popular prices.

H. WESTON, Hempstead, N. Y.

FERNS, FERNS, FERNS

Fine stock of assorted Ferns in best market varieties from 2½ in. pots, at \$3.00 per 100 plants, or \$25.00 per 1000.

Cibotium Schiedel from 4 in. pots, at \$30.00 per 100 plants.

THOMAS P. CHRISTENSEN, Short Hills, N. J.

Bushy Ferns

Unusually fine stock of the Holly Fern (*Cyrtium falcatum*), *Pteris cretica alba*, *Pteris Wimsetti* e. c. 3 in. pots, 6c.; 2 in. pots, 3c. We have never had better plants and will give you very liberal count on January orders.

Cibotium Schiedel, 3 in. pots for growing on, 20c.

ASPARAGUS Plumosus, extra strong 2 in. stock but with some of the foliage slightly disfigured. Give them a small shift and they will make fine plants. \$2.00 per 100.

PRIMULA Obconica Grand. In full bloom. 3 in. pots, 5c.; 3½ in. pots, 6c.; 4 in. pots, 8c.

R. G. HANFORD, NORWALK, CONN.

Nephrolepis Scottii

In the following sizes, extra good value: 2½ in. 50c., 75c. and \$1.00. GRAND SPECIMEN PLANTS at \$3.00, \$4.00, \$5.00 and \$6.00.

JOHN SCOTT

Rutland Rd. and E. 45th St., Brooklyn, N. Y.

LATANIAS

Fine strong plants, 2 in. \$2.00 per 100, \$25.00 per 1000; 3 in. \$3.00 per 100, \$30.00 per 1000; 4 in. \$5.00 per 100, \$50.00 per 1000.

KENTIAS, Belmoreana and Foresteriana, 4 in. 25c., 35c.; 6 in. 50c., 75c.; 6 in. \$1.25, \$1.50; large plants, \$2.00 to \$35.00 each.

PHOENIX, large, from \$2.00 to \$40.00 each.

PANDANUS Utilis, strong 3 in. \$3.50 per 100; \$30.00 per 1000.

AZALEAS INDICA, fine plants, 35c. to \$2.00 each.

FERNS

Boston and Pieroni, 4 in. 15c., 5 in. 25c., 6 in. 50c., 7 in. 75c.

Whitman, 4 in. 25c., 5 in. 60c., 6 in. 75c. to \$1.00; 7 in. \$1.50 to \$2.00, 8 in. \$2.50, \$3.00, \$3.50.

Small FERNS for dishes in all shapes, \$3.00 per 100, \$25.00 per 1000.

JOHN BADER, Mount Troy, ALLEGHENY, PA.

Araucarias

Nice plants from 5 in. pots—
4 to 5 Tiers
60c. each; \$5.50 per dozen.

THE CONARD & JONES CO.
WEST GROVE, PA.

1657 Buckingham Place,
CHICAGO, - - ILL.

(29) *Hydrangea arborescens* var. *sterilis*.—Kindly inform me if *Hydrangea arborescens* var. *sterilis* is the same as *H. arborescens grandiflora alba*; if not, how do these two varieties compare as to color of flowers, time of flowering, etc.? Are there any synonyms for *H. arborescens* var. *sterilis*? M. V. E. New York.

—We think the whole matter had best be left to Professor Sargent for his decision. We don't think any great thing is at stake, one way or the other. E. G. HULL, Richmond, Ind.

[Bailey's *Cyclopedia of American Horticulture* gives "Hills of Snow" as a synonym of *H. arborescens* var. *sterilis*. Ed. F. E.]

(30) Rust on Carnations.—I send you some carnation cuttings which are diseased. A few of my plants are also affected. Please tell me what it is. Shall I throw out any or all of my cuttings and get other stock, or can I do something with the cuttings which will make the future plants all right? North Carolina, R.

—The carnations are affected with a little rust only. We would not advise throwing away the whole crop; just pick off all affected leaves, get the young plants potted as soon as sufficiently rooted, avoid spraying as much as possible and the plants will soon grow away from the disease.

(31) Growing Ground Pine on Long Island.—Will you kindly tell me if ground pine can be grown in the woods of Long Island, and how and when is the time to do it. Conn. C. C.

—The writer has never seen ground pine (*Lycopodium obscurum*) growing on Long Island, but our Mr. Wells states that he has seen it near here in limited quantity. Doubtless farther east, along the north shore where population is sparser, and it is not pulled, it can be found in abundance. BLOODGOOD NURSERIES, INC., Flushing, N. Y.

Ground pine does grow on Long Island though not in great quantities. I have never seen it transplanted, but would suppose that early Spring would be a good time to move it. It is a very dwarf undergrowth in moist land States.

The ground pine used for Christmas greens here is shipped from northern New York and New England. THEO. P. LAWLER, Flushing, N. Y.

European Seed Notes.

The frost has killed nearly all our outdoor plants of biennial stocks, and as this is the third year in succession that this has happened there will be very little left to sell next season. The stock of Beauty of Nice, while a most excellent strain, is hardly a sufficient substitute. Wallflowers appear very sickly, but are not yet dead; the changeable weather during the past week has done much more harm to all our growing plants than the severe frosts of December. The annual fight with the radish seed growers is now in full swing. With the higher prices ruling for grain, a rise in prices for seed crops of every kind is a foregone conclusion. This is especially true of annuals such as cress, mustard, radish and spinach. Our friends must make up their minds to pay a little more for these. As regards biennials for 1909, it is possible that the market may right itself before transplanting begins. An excellent summary of A. W. Sutton's valuable paper on "Recent Grass-Crosses," which was mentioned in these notes last week, appears in the Gardeners' Chronicle for January 25. It is profusely illustrated and is full of interest to the botanist and should be full of interest and profit to every up-to-date seedman. Several of Mr. Sutton's crosses will certainly become valuable additions to our list of green vegetables. The lecture is to be repeated before the scientific committee of the Royal Horticultural Society on the 28th inst. Mons. Philippe de Vilmorin was unable to attend the annual dinner of the French Society in London, owing to the illness of his mother, the widow of Henri de Vilmorin, so well known on your side. The dinner itself was a great success under the genial presidency of Harry J. Veitch. EUROPEAN SEEDS.

ROSES

Potting.

Cutting put in the sand in January will soon be ready to pot. The soil should now be in a warm place, for it cold the little roots coming from the warm sand are easily chilled and from this they recover very slowly. Stir the soil through a fine sieve, so that there will be no danger of breaking the roots by their being pressed against lumps or stones; and the soil should be moist enough to pack nicely and still not cake. Be in no hurry to pot off the cutting, till the rootlets are about one-half to one inch in length, for best results; at longer there is danger of breaking them. For the first potting 2 1/2 and 3 1/2 inch pots are the best, though some growers use 3 inch pots and plant from these, thus doing away with repotting, but as the larger pots require more room the cost is increased and then a repotted plant, other conditions being equal, is much better than the other. Then, too, the danger of overwatering is lessened. In potting firm the soil well, but not too hard, and fill the pots as near alike as possible, to facilitate watering later. Just before taking the cuttings from the sand give them a good watering and do not take up too many at a time, as they must not be exposed to the air very much. After potting give a thorough watering, so that the ball is wet through; this will generally be sufficient for several days. Keep the plants shaded from the sun until the roots start, after which gradually allow them to receive the full rays of the sun. As our next season's success depends on these plants give them the best and lightest spot possible, so as to insure a strong growth. It is well to remove all the soil from the bench where the young plants are to be placed and to fill in two or three inches of ashes; these will afford good drainage and prevent the worms working into the pots. Discard all cuttings that are not well rooted; this will insure a more even batch of plants. It is quality and not quantity that we want. If, as has been suggested before, we take cuttings from healthy plants, then weed on the poorly rooted ones, again discarding the weak plants when repotting, we can be reasonably sure of having good fine stock at planting time. Now is the time to decide just how much room will be devoted to each variety and also to place your order for at least a dozen of the new claimants for favor. While, possibly, it would not be policy to invest too freely in a novelty, still every grower should try at least a few; he may thus find something out of the ordinary that just suits his soil and conditions, and thus be able to improve his business. Killarney the coming season will be grown in larger numbers near New York, as its needs are now better understood, and as it produces good flowers on stiff stems in medium grades more freely than Bridesmaid. Richmond, on the other hand, will be less in evidence, as the demand has not been as good for this rose. It is a pity that this variety has not a few more petals; it is such a splendid grower that we do not like to discard it. PENN.

CLEARY'S HORTICULTURAL CO. AMBROSE T. CLEARY, Management. WHOLESALE, JOBBER, CONTRACTOR. AUCTION, HORTICULTURAL PRODUCTS. 62 Vesey Street, New York. Telephone, 7318 Cortlandt. Correspondence Solicited. Surplus Stock Converted.

NEW VIOLET BOSTON Entirely distinct, a strong grower, a free bloomer, and the finest single violet in cultivation. Ready for distribution in April and May. \$12.00 per 100; \$100.00 per 1000. WILLIAM SIM, CLIFTONDALE, MASS.

DAYTON, O. As we go to press we learn of the sudden death of J. B. Heiss, the well-known florist, which occurred while he was on a visit to his brother-in-law at Bethel, on Friday, January 31 last. Fuller particulars will be given next week.

Indianapolis.

News Notes.

John Bertemann and A. F. J. Baur have returned from the Washington convention much pleased with the outcome. The carnationists will be welcomed in Indianapolis in 1909; this is the third time the local florists will have been honored with the presence of the American Carnation Society, and no effort will be spared to make the event a great success. The State Florists' Association held its monthly meeting February 4 at the Commercial Club rooms. The City Park Board is to secure funds with which to complete extensive boulevard plans. This is done at the present date in order to afford work to the unemployed. Many more acres have been acquired by the board for park purposes. Stewart Ritchie has just perfected plans for the immediate erection of another large carnation house. D. M.

GERANIUMS

S. A. Nutt, Beate Poltevine, Buchner, Ricard, Doyle, Viand, Pasteur, Mme. Salteron, 2 in. pots, \$2.00 per 100, \$20.00 per 1000.

RUTHERFORD, N. J.

ORCHIDS

We shall receive this Spring large quantities of Imported ORCHIDS, namely: Cattleyas, Dendrobiums, Oncidium, Laelias, Vandas, etc. Our facilities for handling large consignments are second to none. We have four collectors, including our Mr. Carrillo, who collect exclusively for us. Our quality and price are too well known to need further comment—a trial order will prove it.
CARRILLO & BALDWIN, Secaucus, N. J.

ORCHIDS

We are now looking orders for freshly imported orchids of all leading kinds to arrive during 1908, at greatly reduced prices. Write us for information as to kinds and prices.
 We have just received the following orchids: *Oncidium Tigrinum*, *O. Sarcodes*, *O. Forbesii*, *Sophranitis grandiflora* and *coccinea*.
LAGER & HURRELL, Summit, N. J.

50 strong well-rooted, transplanted, 18 to 24 inch tops, heavy roots, \$3.50 per 100. 10,000 well-rooted, 20 to 30 inch, \$2.50 per 100; \$20.00 per 1000. 1000 one-year seedlings, 12 to 24 inch, \$1.50 per 100; \$12.00 per 1000. In pots of 2000 and over, \$10.00 per 1000; fine for transplanting; packed free of charge. For samples by mail send 25c. in stamps.
Address, CHARLES BLACK, Hightstown, N. J.

THE WEEK'S WORK

Timme's Timely Teachings.

Primulas.

From the middle of this month until the end of April several sowings of *Primula sinensis* should be made at intervals of about four weeks. Primulas are good stock, the kind that every gardener can grow to perfection, every retailer can recommend as the best of dwelling room plants, one of the few kinds that neither grower nor buyer seems ever to tire of. It is better to supply the demand, which is a good one from early in the Fall until Spring, with stock reared in successive batches, than do as most retail growers do—rely on the outcome of one sowing, made some time in March, and then either run out of stock when more could profitably be handled or be compelled at the last to offer wobbling, long-necked and over-pot-bound plants.

The first lot, to be sown now, should be seeds of such kinds as *Kermesina splendens*, *rubra*, *Chiswick red* and *Rosy Morn*, as also, at least, one flat of the best strain of *Primula obconica*; this latter to be followed by another sowing of the same in April. Mixed strains of Chinese primulas for the latest lots are to be preferred to separate colors, unless great quantities are to be grown. All kinds of greenhouse primulas will do better, be stronger, throw larger and finer flowers, when potted in a rather stiff, but fibrous loam, intermixed with very old manure and a bit of sand, than when potted in too spongy or loose soil, such as contains sandy peat or leaf mold. Even in starting the seeds the soil should be somewhat heavier than that commonly used for the purpose and the seedlings will be sturdier when ready to be handled. At this early date the seed pans, or flats, should be placed on a bottom-warm bench in a house with a temperature and atmosphere as maintained during these months for the more tender kinds of flowering potted plants. Under proper care during germination and after the seedlings are up it will scarcely be necessary to transplant into other flats before they reach the right size for being potted up, unless the little seedlings appear too crowded. Box culture, a shifting from box to box until strong enough for larger sized pots; or, better still, a planting out into the free soil of a mildly heated outdoor frame later on, there to attain full size for the final potting up in early Fall, may be depended upon to result in finer, sturdier plants than any reared under continuous pot culture from the start.

At all events this course should be pursued with the later started lots, if hotbeds and frames are available. The caretaking of primulas in outdoor frames is not a more arduous task than properly attending to their needs when grown otherwise; that is, in pots, or under greenhouse glass. Shading during bright Summer days, the opening and closing of sashes as needed at first, taking them off on cloudy, warm days later on, leaving them off at nights, pinching out premature buds and keeping the plants clean and watered as required, are principal points of frame treatment to be observed in the case of primulas.

While, all things considered, these varieties of primroses are among the easiest of plants to raise, in one single particular they are the most exacting; it is this—the depth at which the plants are set into the soil when transplanted or potted. If a trifle too high they will eventually fall to one side; if in any way planted too deeply the leaf stalks and ultimately the whole crown are likely to rot off.

Smilax.

It is time to sow smilax. The seeds need steady heat and moisture for rapid germination; a rose house temperature and a slightly intensified

heat from pipes directly underneath the bench on which to place the seed trays will be right for the purpose. Any good grade of sandy, fairly rich potting soil will do for the starting of the seeds, these to be lightly covered with the same, or, instead of soil, with a thin layer of finely broken-up and sifted moss, all to be kept uniformly moist by light top sprayings and a covering with glass, boards or paper until the seeds have sprouted. Although it is then necessary to afford all the light possible, as with all seedlings, a removal of the trays from their warm quarters to a cooler place is not advisable in the case of smilax. While they must have light, they should not be deprived of atmospheric and bottom heat, should not be placed in a house or on a shelf, though lighter, also much drier and cooler, a course all correct and safe with many other kinds of stock raised from seeds, but not the right one to follow in the growing of good smilax and asparagus plants for the making of indoor plantations in June or early July, started now, as they are, with this end in view. When the seedlings are of size, having made their second or third leaves, and have then been transplanted from trays to pots, bottom heat again should be resorted to as a means, not merely to expedite top growth, but mainly to impart volume to and maintain vital action of the roots. If this is followed up after every shift, the grower's efforts being conducive in this direction rather than toward rapid top growth, far better stock would be had for the making or renewal of smilax plantations than is usually the case.

Asparagus.

Of even greater value now-a-days than smilax to the decorator and wholesale and retail grower alike are the kinds of ornamental asparagus as cultivated so extensively at present under glass. Wherever one may go asparagus is the leading article in decorative greens, almost to the entire exclusion of any other of the various species greenhouse-grown as such in years gone by. Growers for the wholesale demand have long since felt the need of separate structures for the production of Asparagus plumosus, and many are the houses especially designed and erected for this culture. In such houses all the cultural requirements can fully be met, which very rarely is the case on places conducted by the average retail grower. For the attainment of best results in the growing of marketable strings, if this is the object in making the attempt, a house, a bench or part of a bench must be chosen that leaves no doubt as to sufficiency of head room, ventilation, light, heat, depth and fertility of soil.

There is little use in trying to grow a good cut crop followed by many more in succession, of either asparagus or smilax, if the chief promoters of vigorous growth—a steadily maintained temperature of between 60 and 65 degrees combined with a congenially humid atmosphere and deeply rooted footing in highly enriched soil—cannot be provided. But where such a place is available it will probably work as well, or perhaps more so toward earning fair returns if stocked with Asparagus plumosus than grown to any other crop. If rightly managed one planting will suffice for several years; but to renew the bed before exhaustion of the old plants tends to lower the quality of the product is the wise grower's way of doing. Young stock is raised for the purpose in the same manner as advised for smilax, a sowing of seeds now made resulting in fine, sturdy plants by the middle of June—a good time for the renewal of old or the making of new beds. There need be no fear, however, of root formation not keeping pace with top growth in the raising of asparagus seedlings; in this they differ greatly from smilax from beginning to end. It is this profusion of roots, ever on the search for food, which, in the culture of Asparagus Sprengerii in particular, calls for an abundance of space and great depth of the soil in

planting and liberally measured quantities of partly decayed fertilizer in the preparing of the same. Green room on all sides is also needed for perfect development of top growth, and the full light, healthful air, sufficient moisture in the soil and liquid feeding when the plants are doing their best in perfecting fine sprays of which, after all, only stands for good culture, generally well paid for, doubtlessly so in the culture of asparagus.

Cyclamens.

In the caretaking of greenhouse stock at this season the grower's attention is claimed by two distinctly different sets of cyclamens—the full grown plants of flowering size and the young seedlings started four or five months ago. The treatment of the one differs also materially from that of the other and this especially as regards ventilation and temperature; while for all of them the time has come when a light shading overhead during the sunniest hours of an exceptionally bright day, especially when preceded by a long string of gloomy weather, will prove of benefit. It is from now until we have fairly emerged from Winter's prolonged cloudiness, when an occasional gleam of noonday sunlight is more apt to harm soft growth under glass than at almost any other season. During this period any sort of light shading contrivance, handily placed for adjustment when needed, will prove of service and should be in readiness.

The older plants, now flowering or studded with buds, need for their size, as compared with most other kinds of greenhouse stock, considerable bench room; but without sufficient space between them no really fine or perfectly developed cyclamens can be grown. Their foliage, in many of the superbly finished specimens, as ornamental and indispensable a feature as the number and color of the flowers, and always playing a prominent part in the attractive makeup of any cyclamen put forth as a salable plant, will gain in coloring, texture and durability if as freely exposed as possible to light and air, thus also being benefited to the full extent by frequent spraying. Liquid feeding while the buds are pushing upward helps greatly in finishing up in finest form. Manure-water alternating with applications of pure extract of soot, each to be given once a week until the flowers are fully expanded, will have a greater effect in upholding vigor and imparting intensity to coloring of foliage and flowers than one kind of stimulant alone continuously applied, which in the case of soot, strongly and often given, is a risky and unwise proceeding. Properly cared for, avoiding crowdedness, regularly watered and sprayed, spreading tobacco stems between the pots and keeping the plants in a cool, well-ventilated house, will give greenly and mites little chance of ever becoming a source of great annoyance to a watchful grower.

The young stock should by this time have undergone at least one transplanting, either into small pots or into another box. In either case, the soil to be used for this first shift should be of a light, friable character, very sandy, fresh loam and partly decomposed leaf mold in like proportion being the right kind for the small seedlings, while a more enriched soil should be employed in the later shifts. If ample provision is made for readily working drainage in boxes and the plants as they grow stronger and in need of more room are transplanted from one into the other until of good size for being potted up into 3 or 4-inch pots, this method will prove the easier and shorter process in the growing of fine, sturdy cyclamens during the first half of their lives. In shifting the seedlings from box to box, which if done with any sort of care, causes no interruption in growth, they always present a greatly varying lot as to size, some having outstripped their fellows to so great an extent that an assorting is

CYCLAMEN

Splendens Giganteum Hybrids

This strain has no equal or superior. Per feet flowers of giant type in five true colors, twice transplanted from flats \$3.00 per 100, \$25.00 per 1000, plants in bud and bloom from 4 in. pots \$15.00; from 5 in. pots \$20.00 per 100.

PRIMULA OBCONICA GRANDIFLORA

The celebrated Ronsdorfer & Lattmans Hybrids all colors in bud and bloom from 3 in. pots \$5.00; from 4 in. pots \$10.00; from 5 in. pots \$15.00 per 100.

ASPARAGUS PLUMOSUS NANUS

Special offer for first class grown stock from 2 1/2 in. pots \$3.00 per 100; from 3 in. pots \$5.00 per 100.

CINERARIAS HYBRIDA MAXIMA GRANDIFLORA

No better strain: from 2 1/2 in. pots \$2.50 per 100.

CANNAS. Standard varieties, dormant roots \$2.00 per 100, \$17.50 per 1000.

the best thing to be done, so that those most nearly alike as to strength of growth may be kept together by themselves in separate boxes. This, in continuous box culture, amounts to very much in lightening the caretaking of the young plants. In planting the seedlings, it is safest to manage so that after the soil has been settled by the first watering the tops of the little bulbs remain above ground, the lower half, at least, to be out of sight, or below the surface of the soil.

In a house with a temperature not varying greatly between 55 at night and from 60 to 65 degrees on bright days, a house regularly fumigated and cautiously aired, young cyclamens, whether in trays or already in pots, will stay free of insects and do a good bit of growing from now on. Necessary at all times, but especially so at this season and at this stage in their career, is care in watering, shading on exceptionally bright days, but at all other times affording all the direct light that now it is possible to give. FRED. W. TIMME.

Always in Demand ARAUCARIA ROBUSTA COMPACTA and GLAUCA

JUST LOOK! An ARAUCARIA ROBUSTA COMPACTA OR EXCELSA GLAUCA, worth a ten dollar bill, perfect shape and color, 6-7 in. pots, 4-year-old, 4-5-6 tiers, 25 to 30 in. in height, the same in width, only \$3.00; 6-7 in. pots, 6-year-old, 4-5-6 tiers, 25 to 28 in. height, \$2.00 and \$2.50; 6-7 in. pots, 8-year-old, 3-4 tiers, 18 to 25 in. high, \$1.00 to \$1.75. Lycopodium, 5 in. pot, 1-year-old, 3 tiers, 10 to 12 in. high, \$1.00; 6 in. pots, 1-year-old, 4-year-old, 15-20-22 in. high, 75c; 2-year-old, 2 tiers, nice little plants, 10 in. high, 10c. WITTMANN, larger than 8 in. pot, planted in 7 in. pots, made up in June, three plants in a 7 in. pot, now as large as a bushel basket, \$1.25 to \$1.50 per pot. Success with House Plants

BY LIZZIE PAGE HILLHOUSE. A complete text-book and guide to the care, cultivation and propagation of all plants in the garden and the home. The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all. 12mo., 232 pp., profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, \$1.00; Paper, 50 cents. To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will be or she buy. We offer Special Inducements to all who wish to handle this book. It is a good seller. FOR PARTIERS, ADDRESS A. T. DE LA MARE PRINTING AND PUBLISHING CO. Ltd. Offices 2 to 8 Duane St., N. Y. American Carnation Society.

The proceedings of the seventeenth annual meeting of the American Carnation Society for the year 1908 now form part of the great and interesting story connected with this progressive body. That they were of a highly instructive character will have been gleaned from our very complete report of the event given in our last week's number.

Fred. H. Lemon made an admirable presiding officer, and his address was a most practical one. His conclusions regarding the value and educational character of the society's certificate are those which have always been held by the sensible carnation growers of the country—that "the certificate is nothing except an opinion of the quality of the flower shown at the exhibition." It could be regarded as nothing else.

And while Mr. Lemon desires to encourage in every way the exhibiting of new varieties at the annual shows, he does not, we believe, wish his remarks to be construed as having reference to flowers that fall short of existing sorts, or that would add no credit either to the exhibition or to the grower. Blooms of this kind are, so far as our observation has gone, generally passed by, both by judges and visitors, and the only lesson to be learned from their appearance on the exhibition table is that by the exhibitor himself in demonstrating to him how far behind he is in the production of modern carnation blooms. This, of course, is always salutary and necessary instruction of which a more general acquisition might prove beneficial to those requiring it whose numbers in these days should be few—but as a feature of an exhibition, pure and simple, it is not, we think, the most desirable.

The granting of a "Medal of Merit" to the originator of a carnation that shall manifest superiority commercially and maintain such superiority for three or more years, is an action to be commended, and will prove but a fitting recognition of painstaking effort that has resulted in benefiting carnation growers generally. It is an honor, when bestowed, that will, we doubt not, be valued highly, as it should be, in these days when large numbers of new sorts prove so transitory.

We also think the society did well in removing the fees for registration and certificate entries. These items form part of the work of the organization, which the annual dues should be regarded as sufficient to cover.

The elimination of the charges referred to may result in a little financial loss to the society, but it is a self-sacrifice that, we feel sure, will be generally appreciated by the members.

We note with pleasure, too, the passing of the motion to prune the registration descriptions, so as to confine these to facts instead of to opinions. This is something we have long advocated, as we never could see the justice or fairness of a newcomer trying to ride to fame and finance on the shoulders of proven-worthy predecessors.

President Lemon's warning regarding the likely competition of foreign growers in the production of new varieties is opportune and should be heeded. We hope some exchange of novelties can be effected, whereby mutual help regarding their worth and adaptability to the methods and markets of the countries between which such exchange takes place, can be secured.

We also endorse his remarks concerning the exhibition of carnations in pots, and of displays demonstrating the possibilities of the flower in decorative work. At Indianapolis, next year, we hope to see a beginning made in each of these directions.

The action of the society in offering its medals to be competed for at the forthcoming National Flower Show in Chicago is commendable; a reciprocal deed is always praiseworthy.

The members of the society as well as all carnation growers throughout the country will read with regret of the desire of Secretary Albert M. Herr to retire from that office next year. Having been closely associated with that genial gentleman ever since he assumed his duties, we can testify to his unflinching courtesy, his fair and impartial methods and to the great interest always taken by him in his arduous work. Mr. Herr deserves well of his fellow-members, to whom his long services have given such great satisfaction. The annual reports of the organization during these many years will stand as a monument to his untiring energy and unselfish endeavor on behalf of the American Carnation Society.

The discussion on the expectations of the introducer and buyer of a new carnation respectively did not evolve anything particularly new. Introducers would do well, however, to keep before them the sound suggestions submitted by Mr. Skidelsky, which, summed up, are equivalent to the giving of a "square deal," and only by doling out such treatment can any business be built up on stable lines. While there have doubtless been some miscarriages of justice and fairness, yet there is a good deal in the statement of Frank R. Pierson, that the progress made in the introduction of new varieties of carnations during the past decade is sufficient proof that the majority of introducers are exercising the necessary precautions previous to dissemination. But it is human nature to almost overlook the good work done and to exaggerate that of an inferior quality, something that has happened in this case, as Mr. Pierson correctly put it.

We would call the particular attention of our readers to the valuable paper presented by Professor Galloway (page 116) on the work done and doing by the Department of Agriculture at Washington in behalf of the carnation; especially should a careful study be made of the printed table accompanying that paper. Of especial value, also, are the papers on carnation breeding furnished by Professor Norton, Messrs. C. W. Ward and Richard Witterstaetter. The freedom with which each of these gentlemen gives of his experience is deserving of all praise, and many helpful lessons along the line of crossing carnations can be gleaned therefrom. The fact that Professor Norton is convinced that ere long the breeding of carnations will conform to Mendel's law as applied to plant production is very encouraging, and his call for pedigree records so far as obtainable should not go unheeded. A collation of all such records would be of inestimable value along the lines of systematic breeding of the carnation.

Taking the Washington convention and exhibition of the American Carnation Society as a whole they can safely be classed as measuring well up to those that have gone before. And that the Indianapolis gathering in 1909, with M. A. Patten at the helm, and the well-known enthusiasm and hospitality of the Hoosiers, will maintain the high standard set, is a foregone conclusion.

The Bud-Rot of Carnations.

The Nebraska Experiment Station has just issued Bulletin 103, on "Bud-Rot of Carnations" and "A Mite Accompanying the Bud-Rot of Carnations."

The bud-rot of carnations is a new and destructive disease which has been prevalent in the greenhouses in Nebraska and a number of other States during the past few years. The disease affects the buds in various stages of maturity and produces a rotting of the petals and other flower parts, at least the parts enclosed by the calyx, thus interfering with the normal opening of the flower.

In the historical summary it is shown that of the various diseases affecting carnations only two have previously been described which injure the buds or flowers. The carnation bud-rot is a disease confined entirely to

the buds and flowers, and under conditions favorable for its development has caused serious losses, ranging from 10 to 25 per cent. The disease has been determined to be the result of the growth in the buds of a definite species of fungus, *Sporotrichum anthophilum*, which was first described by Professor Peck in New York. A mite has been found as a constant accompaniment of the fungus in the rotting buds, but the experiments carried out up to date lead to the belief that it is a secondary factor in the cause of the disease, serving only to disseminate the spores and intensify the trouble. The symptoms of the disease are described and different stages of affected buds illustrated by half-tones, so that any florist should be able to identify the disease.

The study has shown that the valuable Lawson carnation is the variety most seriously affected, while no varieties appear to be entirely exempt from the trouble. The most important factor influencing the development and spread of the disease is the water relation. In all houses where the disease has been prevalent the air and soil have been kept too damp. In addition to the water factor, the unhygienic practices which prevail in some houses, such as allowing the accumulation of leaves, rotting buds, trimmings, decaying wood and organic remains in general, apparently afford favorable conditions for the development of the disease.

The disease may be controlled by practicing clean culture with the destruction of all organic remains, keeping the moisture down to a minimum necessary for the healthy growth of the plants, and by picking off the affected buds and destroying them by burning.

The last part of the bulletin, by Dr. R. H. Wolcott, is devoted to a technical description of the mite which accompanies the disease.

Any one interested in this bulletin can receive it by writing the Director of the Nebraska Experiment Station, Lincoln, Nebraska.

Agricultural High Schools.

There has been presented to the lower house of Congress, by Representative Charles R. Davis of the third congressional district of Minnesota, a bill (H. R. 534) which should receive the hearty endorsement of the florist trade, inasmuch as its provisions are right in line with the desires and aims of the S. A. F. O. H., as these were expressed and outlined at the Philadelphia convention last year, to the effect that horticulture should form one of the studies of pupils in the various schools through the United States. The Davis bill does not directly specify the teaching of horticulture, but it is generally accepted that the term agriculture is sufficiently broad to cover and does cover horticulture in its various branches, and as the Secretary of Agriculture is in charge, under the provisions of the Davis bill, of the allotments to be made to the respective States, Territories, and the District of Columbia, for the purpose of the proper carrying out of the provisions of the act, it may, we think, be safely assumed that the teaching of horticulture, including floriculture, will not be overlooked in the new curriculum.

The bill provides, among other things:

Section 1. That, commencing with the fiscal year beginning July 1, 1910, there shall be and hereby is annually appropriated, to be paid, as hereinafter provided, to each State and Territory and to the District of Columbia for the maintenance of instruction in agriculture and home economics in agricultural high schools of secondary grade and instruction in mechanic arts and in home economics in city high schools of secondary grade, a sum of money equal to not more than ten cents per capita of the population of each State and Territory and the District of Columbia, respectively, as shown by the last preceding federal or State census, PROVIDED, that in any State with less than five counties and in any State or Territory with less than one hundred thousand rural population there shall be one agricultural high school which shall receive not more than ten thousand dollars annually under the provisions of this act.

Section 2. That the funds thus appropriated for instruction shall be used only for distinctive studies in agriculture and home economics in agricultural high schools and for distinctive studies in mechanic arts and home economics in city high schools, and that all States, Territories and the District of Columbia and all cities and schools accepting these funds shall provide other funds with which to pay the cost of providing the necessary lands and buildings and to pay the cost of instruction in such other and general studies of secondary grade as will complete a well-rounded high school curriculum suited to the needs of the respective sections of the Union.

Tecoma Brycel.

Editor Florists' Exchange:

The above is undoubtedly the correct name of the plant mentioned in The Florists' Exchange, page 41, as Tecoma Regina Sabine. The Gardeners' Chronicle, London, England, published a supplementary illustration of the species about two years ago, with full details of the reason for adopting the name heading this note.

Maryland.

COUSIN JACK.

The Carnation Society Banquet.

As mentioned in last week's issue a banquet was tendered the visiting delegates and their ladies by the Washington Florists' Club at Raucher's Hotel. It was a most pleasant affair and greatly enjoyed by all present. Regrets were expressed at the unavoidable absence of William R. Smith and Joseph R. Freeman, both of whom were suffering from the grip, a malady just now very prevalent in the Capital City.

President Peter Bissonet of the local club acted as toastmaster, and introduced the various speakers. In reply to the toast "Our Country and President," Hon. William E. Andrews, Auditor of the United States Treasury, Washington, D. C., made a stirring and patriotic address, which would have done duty as a Fourth of July oration or for a similar occasion, and in which the eagle was made to scream vociferously. The speaker epitomized the history and development of the country from the landing of Columbus to the regime of President Roosevelt, his remarks being punctuated with great applause.

Fred H. Lemon responded to the toast "The American Carnation Society." He traced the history of the organization from its inception, stating that its founders were optimists imbued with the idea of developing the possibilities of the flower, with a desire to encourage fair competition rather than to control the output. He paid high tribute to the loyalty of the Canadian growers, among whom were some of the society's staunchest supporters. "There is no dividing line as regards the American Carnation Society," said Mr. Lemon, "we are all one people." (Applause.) Mr. Lemon sees a bright future for the association, and he predicted a great exhibition and meeting at Indianapolis next year.

President-elect M. A. Patten then made a few remarks. He thanked all for the honor conferred upon him, and characterized the Washington exhibition as the greatest carnation display ever held in the world. He was followed by John H. Dunlop, who expressed the appreciation of the Canadian brethren for the courtesies extended to them. He commended the business tact of the members of the Carnation Society, which, he said, always resulted in great attention being paid to the proceedings, and a keen interest manifested in the exhibition; he promised a good delegation from Canada at the Indianapolis gathering in 1909.

The toast "Washington, Our Capital," was fittingly responded to by Hon. Robert N. Harper, President of the Washington Chamber of Commerce. He said that the aim of Washington was to become as great an industrial as it was now a legislative and cultured center, and he pointed out the possibilities and advantages of the city along this line.

Professor Koehler of Washington here entertained the audience with several humorous and Shakespearean recitations which were much enjoyed.

The next toast on the list was "The Department of Agriculture," responded to by Professor David G. Fairchild. In the course of his remarks Mr. Fairchild expressed his pleasure at being able to look into the faces of the men who had done so much for the improvement of the carnation. Florists had not always made the fortunes they do to-day in the creation of new varieties that please the public eye.

Speaking of the Department of Agriculture, the professor said that it is generally looked upon as an organization of the Government, but there are very few who take the pains to study out and to realize what the Department really is. "It is a collection of young men; the Department of Agriculture as it stands to-day has been built up by just such men as are here this evening. It can be easily criticised; it has many faults, and practical men are those who most easily find out its shortcomings." Mr. Fairchild then briefly outlined the history of the Department from its inception in 1849. There are now over 5,000 employees in the various branches of the Department. "What are these men doing?" you will ask. "They are drawing their salaries," many of you will say. But, gentlemen, we are trying to do something that it is very difficult to do. The bureau of plant introduction, with which over 800 men are now connected, is trying to find out what plant producers want and to meet that want. The problem of intensive agriculture is a great one, and there are already in the field two races whose knowledge of intensive agriculture is immensely greater than ours. While the Department of Agriculture was yet in its infancy, Japan sent to Washington and took the then Commissioner of Agriculture to organize its own similar institution. There are now 47 experiment stations in that little empire, and these are models of equipment and research. China has also started in along the lines of intensive cultivation. "We know that the Japanese are great florists and cultivators," said Mr. Fairchild, "but it is my opinion the Chinaman is the greater, and that we have before us a great competition—the greatest that the world has ever known. And it is not with the European nations, which we have left behind in some respects in the advancement we have made in practical plant production; but it is in the Orient."

Professor Fairchild then referred to the efforts of the Department to secure new plants of value, again

emphasizing the difficulty of finding just what the public wants. The Department does not aim to build up a great herbarium or a great botanical garden, but it aims to get and get quickly into the hands of cultivators living seeds and plants. "In this work a beginning has been made, and it remains for individuals and associations such as this to make the necessary use of the material which the Department of Agriculture provides." (Applause.)

Robert Craig replied to the toast "Horticulture." The practice of the art, he said, had in every age proved the greatest enjoyment to all engaged in it; man's most perfect rest was found in a garden. Mr. Craig paid a glowing tribute to the work done by the Bureau of Plant Industry at Washington, under the able supervision of Dr. Galloway; and spoke with appreciation of the labors of William R. Smith, through whose instrumentality valuable shrubs and trees have been distributed to all parts of the country. "Until the work of that man is written up by a capable hand, we cannot estimate the value of that work," said Mr. Craig.

"The Horticultural Press" was eloquently handled by William J. Stewart, who pointed out the press's great services to the trade, its importance, and the cheap cost to the purchaser at which each of the trade papers was placed in his hands.

The Late Gustave Wittbold
(See Obituary Page 148 issue of February 1, 1908)

William F. Gude, in his usual felicitous and graceful manner, responded to the toast "Our Guests," followed by C. W. Ward for "The Ladies," in his able style.

The distribution of the various medals and other trophies was then proceeded with; after which was read the report of the committee on final resolutions, in which thanks were tendered the Commissioners of the District of Columbia, and the Washington Florists' Club, reference made to the valuable things learned at the joint meetings with the American Breeders' Association; special votes of thanks passed to Professors Galloway and Norton for their instructive lectures, also to the press of Washington for the full and accurate reports of the society's meetings.

The affair terminated at a late hour.

Reception at the White House.

On Thursday afternoon the delegates attending the conventions of the American Breeders' Association and the American Carnation Society were received by President Roosevelt in the East Room of the White House. Splendid vases of carnations Alma Ward and Mrs. C. W. Ward, also a mixed vase of Afterglow, Aristocrat and Beacon, were presented to the President. Mr. Ward in tendering the flowers said: I have a very pleasant duty to perform, having been instructed by the American Breeders' Association and the American Carnation Society to present you, Mr. President, with specimens of what are considered fair samples of sci-

entific breeding which applied to the carnation. One vase is for yourself, the other for Mr. Roosevelt, and as is your rule, Mrs. Roosevelt will of course have the privilege of selecting the vase she prefers.

The President returned thanks for the gift, expressed himself as being glad to meet the delegates, and congratulated those who had brought them. He then shook hands with the visitors, and with the fair sex along with them on their last departure. An word of greeting to several. When William P. Craig's turn came, he commented on the fact that although the carnationists all wore a flower, the President did not, and he immediately removed an Eucharistress bloom from his own lapel, pinning it on that of Mr. Roosevelt, who enjoyed the remedying of what Mr. Craig termed "an outrage."

Thus passed into history a great event in the life of the eventful Carnation Society.

CLUB AND SOCIETY DOINGS

THE TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY held its regular monthly meeting in Good Templars Hall on Friday evening, January 31, 1908. President Angus in the chair. There was a large attendance of members. William W. Weaver was elected an active member, and one nomination was received.

Several communications were read from friends regretting their inability to be present at our last annual dinner; and an invitation was also read from the New Jersey Floricultural Society requesting members to attend its annual smoker on February 7.

As it was carnation night, and as treasurer J. T. Lawrie had kindly offered two prizes for the best 18 blooms, 3 varieties, 6 of each, a very fine display of flowers was in evidence. First prize was awarded to Mr. Samuel Untermyer (W. H. Waite, gardener), Yonkers, N. Y., with varieties Winsor, Eucharistress and White Eucharistress. Second prize went to Mr. Geo. Legg (J. Elliott, gardener), Tarrytown, N. Y.; with White Eucharistress, Miss Helen M. Gould and Mrs. M. A. Patten. F. R. Pierson Company had, for display only, a very fine lot which was awarded honorable mention; the varieties were, White Perfection, Red Chief, Victory, Melody, Beacon, Winsor, Rose Pink Eucharistress, White Eucharistress, Variegated Lawson. Honorable mention was also given to Scott Brothers, Elm-Gord Nurseries, for vases of Beacon and Helen M. Gould. A cultural certificate was awarded to Mr. Waite for very finely grown spikes of magnonette May's Giant.

Quite a lengthy discussion on carnation growing followed, viz.: cutting, method of striking, temperature, growing ready for the field or indoor, benching, etc. All listened with pleasure to the interesting remarks made by William Scott, F. R. Pierson, D. McFarlane and John Woodcock.

The most entertaining feature of the evening was the brief account of visits made by F. R. Pierson to several growers in different parts of the country, also his attendance at the convention of the American Carnation Society, at Washington, the grand exhibition, banquet, reception, etc.

LOUIS A. MARTIN.

NEWPORT (R. I.) HORTICULTURAL SOCIETY. The regular fortnightly meeting of this society was held on Tuesday evening, January 28, in Mercury Hall, President John T. Allan in the chair. Alex. MacLellan gave an interesting address on "Plant Nomenclature," which was well received. The discussion following was taken part in by Messrs. Joseph Gibson, James McLeish, A. O. O. Taylor, Bruce Butterton and John Baumgardner.

Refreshments were served by the entertainment committee, after which a lively discussion took place on the classification of dahlias, there being a divided opinion regarding the class to which that fine yellow, Mrs. Charles Turner, belongs. The prevailing opinion seemed to be that under high cultivation it can be developed into a good cactus form. D. M.

AMERICAN BREEDERS' ASSOCIATION.—At its meeting in Washington, D. C., last week this organization elected the following officers for the ensuing year: President, James Wilson, Secretary of Agriculture; vice-president, Charles Willis Ward, Queens, N. Y.; secretary, W. M. Hays; assistant secretary, H. H. Mowry; treasurer, M. H. Gentry; chairman of annual section, A. P. Grout, Winchester, Ill.; secretary of annual section, Dr. C. B. Davenport, Cold Spring Harbor, N. Y.; chairman of plant section, H. J. Webber, Cornell University; secretary of plant section, Professor N. E. Hansen, Brookings, S. D.

Many valuable papers were read which will appear in Volume 4 of the association.

Continuation of Proceedings
of Washington Convention.

Points on Carnation Breeding in America.

Read by C. Willis Ward, Queens, N. Y., before joint meeting of American Carnation Society and American Breeders' Association at Washington, D. C., Thursday, January 30, 1908.

Though I have devoted a considerable time to the breeding of carnations and to the study of them during the past fourteen years, in view of the complexity of the subject and my lack of scientific knowledge, I feel somewhat diffident in placing my views before a conference composed of the most advanced scientific talent of the world. I shall not attempt to enter into a scientific discussion of the subject, but will endeavor to state in plain language what seems to me to have been thus far accomplished.

As most florists know, the original carnation, which has been known in history for several centuries before the Christian era, was a five-petaled single bloom about one inch in diameter and of a pinkish-mauve color. It was distributed in its wild state over the whole southern half of the temperate zone in Europe, but was known more particularly to historians as inhabiting France and Northern Italy. It was found in abundance in Normandy, whence it is generally believed to have been introduced into Great Britain about the time of the Norman Conquest. Even so recently as 1874 it was found in a wild state covering the Castle of Pallaise, in which William the Conqueror was born. It was described by Theophrastus as early as 300 B. C., and has been frequently mentioned in history since that date.

The carnation of to-day, the subject upon which I am working, is the product of several centuries of hybridization and culture. It is an open pollinated species, and mother plants can be chosen from among hybrids, as well as by inbreeding upon the same plant or upon plants of the same variety. A variety once produced from seed is easily perpetuated for a certain period by propagation from cuttings which are easily rooted and usually secured in abundance. Improvements in varieties may be made by bud selection, and new varieties are sometimes secured by bud variation (sports), as well as from seed variation and by hybridization.

Raising from Seed.

In raising varieties from hybridized seed very few improvements are produced, the proportion being about one good variety for every thousand hybrids grown, and probably as little as one decided advance in each five or ten thousand hybrids grown; and unless some law is

White Enchantress.

Enchantress

Carnations at Department of Agriculture, Washington, D. C.

discovered whereby we can forecast more surely than we now can what certain specified hybrid seed will produce, it would seem as if even this low proportion of valuable new varieties would decrease rather than increase in view of the higher standard which is being demanded from year to year.

Up to the present time I have been pursuing my studies in breeding upon the single subject of color alone, basing my work upon the theory that any laws developed in color would hold good when applied to the development of other qualities and this hypothesis I still believe to be correct.

The tools used are very simple, consisting only of a pair of delicate tweezers and a microscopic magnifying glass. I used to employ a fine camel's-hair brush for transferring the pollen, but eventually abandoned it, as I found the use of the tweezers less difficult, and speedier work could be done than with the brushes.

In hybridizing the carnation the first step is to remove all the anthers from the mother flower before they develop, and to watch the pistil until it is in a proper receptive condition. The anthers of the selected male parent are watched until just bursting, and the pollen is in the condition of a dry powder. The anther is then removed by means of the tweezers, and the pistil of the mother flower is fertilized by lightly touching it along its entire length with the pollen-bearing anther. Conception generally takes place within twenty-four hours after this operation provided the conditions are favorable.

Breeding by Color.

In order to pursue my color studies with reasonable method I have divided the work into the following sections:

1. Fancy section, comprising all varieties peculiarly marked, of various colors.
2. Purple and blue section, comprising all purple flowers and any which may show a tendency toward blue in color.
3. Crimson and maroon section, comprising all shades of crimson, maroon or scarlet-maroon.

4. Scarlet section, comprising all shades of red and scarlet.

5. Light pink section, including all shades of salmon, flesh or daybreak tints.

6. Dark pink section, including all rose, cherry and deep pink tones.

7. White section.

8. Yellow variegated section, including all varieties having a yellow ground with scarlet, crimson or pink markings. I have not as yet been able to establish a pure yellow section, for even though the seedling plant may give pure yellow flowers for a time, as soon as propagation is carried on to any extent, more or less variegation appears.

9. White-variegated section, comprising all varieties with white grounds marked with various colors.

10. Pink-variegated section, comprising all varieties having a pink ground of any shade with markings in deeper colors.

In the purple and blue section I have not as yet succeeded in producing anything that might be termed a blue; for, although we have had several varieties showing a distinct blue shade, there has invariably been enough pink in it to convert the tone into a purple or a mauve. The crimson, dark and light pink, scarlet, and white sections have been fairly well fixed; but the yellow, white and pink variegated, and blue sections will be very difficult to fix, as they are essentially mosaics, and there is a constant tendency toward variation in all their progeny.

To Arrive at Pedigrees.

In order to render the study of pedigrees easier, I have devised a system of "bench cards" which are used as labels tied to each variety under experiment, and which at the end of the season are filed away in a card index, thus preserving all of the original records made in my work. I find this system exceptionally useful, as it enables one to determine at a glance the pedigree of any variety when working upon it. My object has been to study out some system whereby the color tones might be purified, and rendered more brilliant or delicate and more pleasing to the eye; and while I have paid some considerable attention to size of flower, freedom of bloom, integrity of calyx, length and strength of stem, and fragrance, the purity of the color has been my first consideration.

In order to develop more brilliant shades, I have, as a rule, confined my crosses to plants both bearing flowers of the color which I desire to improve—that is to say, crimsons were crossed with crimsons, light pinks with light pinks, dark pinks with dark pinks, whites with whites, and so on; and the result seems to indicate the following hypothesis, viz., that the percentage of color contained in the parentage for several generations back controls to a very large extent the color of the progeny. I do not, of course, mean that by using parents on both sides that have practically a scarlet pedigree for several generations back all scarlets will be invariably produced, but that where such parents are used, the chances of securing the improved scarlet color desired are greatly increased. True, the progeny of such parentage frequently show shades varying from red or scarlet, such as pinks, maroons, purples, and even white and yellow grounds with more or less variegation of all of the colors mentioned. Again, a cross between a white variety, having practically a white pedigree for several generations, frequently produces scarlet flowers; but, as a rule, such scarlets are not as brilliant or persistent as those produced from plants having mainly scarlet pedi-

Seedlings of 1907.

Helen M. Gould.

Carnations at Department of Agriculture, Washington, D. C.

gress. One of the best ways of proving this hypothesis is to take two scarlet parents the pedigrees of which are mainly white. By crossing these, very few scarlets will be produced—sometimes none at all—but a large percentage of the progeny will frequently be pure white, or white grounds marked with scarlet or various shades of pink. I have sometimes thought that by taking a scarlet variety of comparatively pure scarlet pedigree and crossing it with a white variety the pedigree of which is largely scarlet, more clear and persistent scarlet tones are produced than where the pure scarlet pedigrees are used. For I have often found that with pure scarlet pedigrees there is a tendency for the color, even though it be very brilliant, to blacken, or turn a slaty shade when exposed to bright sunshine. While I have not been able to prove to my satisfaction that this hypothesis is right, there still seems to be evidence enough to warrant the assertion that if you desire free-blooming habits use parents having early free-blooming habits. The same should hold good if you desire to produce varieties with extra large blooms, or perfect calyx, or any other peculiarity in habit or form of flower; it also seems to hold good in regard to fragrance. Again, the early-blooming varieties usually have small to medium-sized blooms, and the very large flowering varieties are generally late and inclined to be shy bloomers. This can to some extent be overcome by crossing large flowering late blooming varieties with the early free blooming ones which have the largest blossoms. This, if followed up, will in the end produce large-flowered early-blooming varieties. Working on these lines, I have already succeeded in producing Alma Ward, which under our intensive culture gives flowers ranging from 2½ to a little over 4 inches in diameter on stems from 2 to 3 feet in length, according to the season; and these flowers are produced in sufficient abundance to make the variety very profitable commercially. It is also a fairly early bloomer, coming into flower by October 1. This variety was obtained by crossing Prosperity, a large flowered, not very free variety, with a white seedling having a very large flower and long stems, and quite a free bloomer.

Peter Fisher, the raiser of The Lawson and Eucharis, two of the most satisfactory of our American commercial varieties, secured his strain from crosses between Daybreak and a sport of Tidal Wave, two quite large flowered very free blooming as well as early varieties. In The Lawson a curious blending of the qualities of both parents may be observed. Daybreak is a long-stemmed variety, Tidal Wave usually has quite short stems in the early part of the season, but as the season advances they become as long as those of the parent Daybreak. Double flowers may be produced by crossing single blooms with pollen from very double ones, and the more double the pollen parent is, the greater seems to be the proportion of double flowering seedlings produced.

Studies of Color Characteristics.

Studies of color characteristics during the past 12 years seem to have determined that the male parent does not exercise any paramount or dominant influence, but that either male or female or both may determine the dominant characteristics of the progeny.

In the case of seedlings used from other hybridizers, I am not able to give the color parentage, but expect if we had such color parentage it would not tend to change the results. My conclusions from these studies have led me to believe that it is not either parent that exercises dominant influence upon the hybrid, but there may be several elements which tend to control the characteristics in the hybrid. As for instance, the total percentage of the characteristics of a number of ancestors which may be illustrated as follows: Supposing that crossing a dark pink upon a white, sixty per cent. of the ancestry on both sides was dark pink, the chances to secure a dark pink in the hybrid would be largely in proportion to the percentage of dark pink existing in the ancestry on both sides. On the other hand, supposing that we crossed a white with a white which had a large percentage of dark pink in the ancestry, and, as the result of said cross, we produced a large percentage of whites. This might tend to show that the condition of the chromosomes in the cells exercised the paramount influence in determining the characteristics produced in the hybrid. Now, it might be possible to take different individuals, the result of the same cross, all of the individuals being white, the crossing two individuals might produce a large percentage of whites, while crossing two other individuals, all being white, might produce a large proportion of pink. This would again tend to prove the theory that the condition of the chromosomes in the cells of the individuals might exercise the paramount influence.

Crosses Between Same Individuals.

There is another peculiar thing that seems to be the case in regard to crosses between the same individuals, and that is that crosses between such individuals made at different periods of the year when the plants were growing under somewhat changed conditions produce different results. This might lead us to the theory that the condition of the individuals at the time that impregnation takes place may exercise paramount influence

Carnation Variegated Lawson.

As the Flowers appeared on Second Day of Exhibition of American Carnation Society, at Washington, D. C. Exhibitor, John Reimels, Woodhaven, N. Y.

over the characteristics of the progeny. This theory might seem to be proven by the results obtained in the production of mankind where a dozen children the result of the union of two individuals and born at somewhat widely different periods present widely different characteristics, both mental and physical as well as in appearance.

My impression is that it will take several years' study in order to determine the question. Possibly it may be necessary in continuing my experiments to segregate the female blooms in apartments by themselves so as to prevent the chance of a foreign grain of pollen alighting on the pistil, as this might explain some of the apparent idiosyncrasies in the results obtained in my work.

Crossing Different Colors.

The summary of the results of crossing different colors may prove very interesting. For instance, where crimson was crossed with crimson the results produced twelve crimson and five scarlets; where dark pink was crossed with dark pink, thirty-seven dark pinks were produced; where scarlet was crossed with scarlet, ten scarlets were produced; where white was crossed with crimson, five whites were produced and only two scarlets; where white was crossed with white, thirty-four whites were produced, and only one white variegated with pink, there being no solid colors. Where white was crossed with crimson, five whites were produced and two scarlets, the balance being divided between dark pink, flesh pink and crimson, but where white was crossed with dark pink, the result was three pure whites.

There is another element in making up these studies which may interfere with their value in deciding the question of paramount influence and that is that only varieties that possessed a number of representative characteristics were preserved and records kept of them.

A great mass of stuff was thrown away, and in making these crosses we were constantly selecting plants possessing all the characteristics desired. I am inclined to think that the fact that we threw away a lot of useless stuff will not change the result. For instance, taking the result of crossing white with white, there were saved for observation from these crosses thirty-four whites and one white variegated with pink, as all the white parents of both sides were selected not only for their good color, but also for size and form of flower, integrity of calyx, healthy constitution, stiffness of stem, vigor of growth, and also for freedom of bloom. The fact that thirty-four whites were selected for trial as against only one white variegated with pink and that the results of these white crosses did not produce anything in solid colors that were worthy of selection for trial would seem to indicate that whatever laws exist in regard to the influence of the parents upon the progeny would finally prove to be applicable not only to color but to all other characteristics.

Results of Pure Crosses.

Now, when we come to the consideration of pure crosses which we might specify as crosses between males and females of the same color, we find the following remarkable results: A cross of white upon white produced thirty-four whites against one other color; a cross of light pink upon dark pink produced six light pinks as against four of other colors; a large number of crosses of dark pink upon dark pink produced thirty-seven dark pinks against twenty-four of other colors; a cross of scarlet upon scarlet produced ten scarlets. All of which would tend to indicate that by using two individuals possessing the same characteristics, the chances to reproduce a large proportion of these same characteristics are very much enhanced. This might be shown very nicely in the cross of crimson upon scarlet, which produced twelve crimsons and five scarlets

Breeding Carnations.

At the Thursday afternoon (January 30, 1908) joint session of the American Carnation Society and the American Breeders' Association, Professor J. B. Norton of Cornell University, Ithaca, N. Y., gave a very interesting talk on his experiments in the breeding of carnations. Preliminary to his remarks on the specific feature of his address, Professor Norton gave the members a short exposition of Mendel's law as applied to plant breeding. He said there are certain characters in plants and animals which occur in pairs—that is, we may have in an animal the presence of long hair as opposed to the presence of short hair or the absence of long hair; we may have the presence of color as opposed to the absence of color. When we make a hybrid between plants we do not get offspring where the two absent or present characters remain distinct. In the first generation the cross may give intermediates, but the progeny when again crossed with the original parents does better in that respect. In plants we have so many characters to be considered that sometimes breeders are apt to get confused. There are three types possible with one pair of characters, and there are nine possible types when another pair of characters are introduced, so that each time an additional pair of characters are introduced, the ratio of possibilities is multiplied by three. (This was demonstrated by the speaker by the use of playing cards.)

Mr. Norton stated that his experiments in carnation breeding had convinced him that the results very nearly balance up to what might be expected in Mendelism when one pair of characters are employed. The result of crosses between several standard varieties had in all cases shown no uniformity of type in regard to doubling, singles appearing in every series. The percentage of singles appeared to be rather constant for the different lots, the general average for the whole lot being about 23 per cent. of singles to 77 per cent. of doubles. The doubles varied in the amount of doubling, but could be roughly divided into two groups, standards and "burst-ers" or full doubles, the latter making up about one-fourth of all the seedlings. These percentages agreed so closely with the second generation results of a Mendelian character that the professor had ventured the opinion that the standard greenhouse carnation of this country was the unfixed hybrid of a cross between a single and a full double and that 100 per cent. of standard doubles could be raised from a cross between a single and a full double carnation.

The ordinary theories of heredity based on the idea up to the time that Mendelism came out would disagree with his idea. DeVries, in speaking of mutations, seemed to take the stand that the carnation is an ever-sporting variety, throwing all the time a certain percentage of singles. DeVries had no actual statistics to base his idea on, but simply took the word of one of his carnation growers who had always got a certain percentage of singles in his work. In Professor Norton's own experience, when singles were pollinated with parents that were very full doubles, the most wonderful results occurred. Something like 300 seedlings were grown from fifteen different seed pods. Out of the three hundred only two came single, and there were but three or four that could be classed in the full double. The very fact of using a single as a seed parent on a full double and getting practically 100 per cent. of doubles would go a very long way to convince the carnation observer that here was a straight case of Mendelism. When growing singles crossed with singles nothing but single varieties would result. Another cross was made by using the hybrids, which had thrown 50

Exhibitors F. Dorner & Sons Co., Lafayette, Ind.

as against three of other colors. In this case it is probable that there was considerable crimson blood in the ancestry of the female parent.

The cross of crimson on crimson need not be taken very seriously, as it is the result of but a very small number of seeds, and I am inclined to think that there was considerable scarlet blood in either one or both of the crimson parents.

Of course when we make mosaic crosses, such as white upon scarlet, pink, crimson, and other colors, we must expect a breaking up of colors in the progeny, and where we cross two of the same color we must expect more or less breaking up of colors in the progeny, especially where the immediate ancestry contains parents of widely varying colors.

Referring to examples of individual crosses, suppose we take cross 2313-07, a scarlet upon white. It will be noted that in these notes the pollen parent is mentioned first, as some other hybridizers mention the female parent first. Now, the color parentage running back for some ten or twelve years, shows that on the male side there were six dark pink, six yellow variegated, five crimsons, three whites, two scarlets, one light pink and one white variegated. This pedigree is made up without reference to the nearness of any of the individuals of any particular color being particularly near to the seed and pollen parents, but it simply indicates that among the male parentage of both sides six dark pinks occur, etc., while on the female sides five dark pinks, three crimsons, one scarlet, four whites, five white variegated and two white flaked occur.

Assuming that dark pink and crimson, purple and scarlet would tend to produce dark pink or scarlet, we should naturally anticipate a large number of dark pinks or scarlets, whereas we get only one dark pink, one scarlet and one white, thus indicating that other influences than the percentage of the same characteristics in either or both of the ancestors may determine the characteristics in the hybrid.

The results of these experiments and the study thereof have led to the conclusion that neither parent exerts predominant influence in determining the characteristics of the progeny, but that said characteristics may be determined from either side of the parentage or may result from modified characteristics of both parents as well as both ancestries.

Carnation White Enchantress

per cent. of the germ cells single and 50 per cent. of full double, with pure single. This resulted in the full double germ cells uniting with the singles, and the progeny gave 50 per cent. single and 50 per cent. of the new type.

With regard to color, in working with a number of crosses between white and white, white with light pink and white crossed with pink, there were some interesting results. When two whites were crossed together most of the seedlings came white. There was one exception to this, however, with White Lawson, which is a sport from the Pink Lawson, and gave to a certain extent the progeny one would expect from the Pink Lawson, although in a few seedlings the percentage of white was much greater than when Pink Lawson was crossed with itself.

A light pink cross with light pink gave nothing but light pink and white, and yet from a cross of white with light pink he got a large number of other things—pink and sometimes scarlet. One of such crosses resulted in five scarlets, seven pinks and nine white, so that the light pink character was entirely lost. Light pink crossed with light pink gave a whole group of colors, and when such is the case, the conclusion may be arrived at that there is something in the carnation that resembles the color of stocks and sweet peas, where Bateson had found some very peculiar results. The latent germ character when bred together with the germ character of another variety produces something that is entirely different from either of them. In crossing sweet peas of the Emily Henderson type, Bateson got a whole group of purple in the first generation; in the second generation it split up so that he got a large number of colors—some red and some white. Some of the purple bred true, some of the red bred true and practically all the white came true when self-fertilized. To get a fixed strain in stocks or sweet peas, it had been necessary to carry on the work for an extended period.

Sometimes when working with scarlets the professor had got practically all scarlets. Pinks when crossed with nothing else result in several different colors, but last year he had a pink cross with scarlet that gave all pink; the parent in this case was a single variety. Pink sometimes shows itself to be dominant over scarlet, which is apparently a very strong pre-potent color.

Professor Norton had an idea that the number of cotyledons might have something to do with the relation of single and double flowers, but an experiment had shown that some seedlings with extra leaves had given just the same proportion of doubles and singles that the ordinary ones did.

A tabulation of all the crosses made in the three years shows that when a group is self-fertilized, or when pink is crossed with pink and white crossed with white, foreign colors in the seedlings are considerably fewer than when two different colors are crossed together. For instance: In crossing light pink and white, out of 175 seedlings grown there were nine light pink, eight white ground and all the rest white; but when white was crossed with light pink, there were five scarlets, two dark pinks, nineteen pinks, thirteen light pinks, forty white and four variegated, and the splitting up runs in that way right along. Enchantress when crossed with Enchantress usually throws a pink Enchantress.

The whole result in breeding carnations for color would lead to the conclusion that as yet there is no definite understanding as to these relations, and it will take organized work by a number of growers to reach a definite conclusion. In doing this work it would be necessary to take a large number of seeds where the flowers have been fertilized by their own pollen. In a commercial way, of course, this is not to be recommended, because it has a tendency to weaken the vitality of the seedlings. It would be of value to know

Beacon

Winsor

Carnations at Department of Agriculture, Washington, D. C.

what these self-fertilized varieties would produce. For instance, we want to know what the progeny of *Enchantress* would give by itself when mixed with nothing else, and what there is in *Lawson* similarly treated, then it could be told to a certain extent what these would produce when crossed together. The question of getting pure color types depends largely on knowing the pedigrees of the varieties crossed.

In conclusion, Professor Norton said: "Going back to my first proposition of Mendelism, I cannot say that this relation between singles and doubles would be of any great value to the average grower, excepting that it would make it possible for him to save and get good plants from a valuable single that otherwise he would throw away. It gives him the assurance that by this method of crossing he can get 100 per cent. of standard types from a good single. I want to suggest to the members of the American Carnation Society the great need of keeping records of the parentage of the standard sorts, so that in working with the progeny of these we will have something to fall back on; so that we can tell the color of the parents and the grandparents. In the published records of the present day the pedigrees are not given beyond two generations. If I could get some of the unpublished records, I would like to get these together so as to obtain what might be called "A Herd Book" of the carnation. The American carnation to-day is purely an American product, and we should have its history traced back to its early importation. Some of the older men who have kept records could give us great assistance in getting this material together; we would then have the pedigree record of at least one American production, and it would be much easier to keep it going from now on." (Applause.)

The Bud-Rot of Carnations.

By E. D. HEALD, Agricultural Experiment Station of Nebraska.

During the past few years a troublesome and destructive disease of carnations has been prevalent in a number of the greenhouses of the State. The disease affects the buds in various stages of maturity and produces a rotting of the petals and other lower parts, at least the parts enclosed by the calyx, thus interfering with the normal opening of the flower. The disease has therefore been termed the "bud-rot" of the carnation.

Historical.

The bud-rot of carnations was first reported in 1905 by Dr. Wolcott from specimens received from a greenhouse at Beatrice, Nebraska. He attributed the trouble entirely to a mite which was constantly present in the affected buds. The mite was briefly described as belonging to a new and hitherto undescribed species and possibly a new genus. At this time the fungus origin of the trouble was not suspected. Later in the same year the same trouble was reported to the writer and an investigation was begun. The first examination showed the mites, and in addition the rotting petals were found to be pervaded by the mycelium of a fungus. An examination of the rotting buds led to the belief that the mites were only secondary, and that the fungus was the primary factor in causing the disease. *Fusarium* spores were found upon the rotting petals and it was supposed that the trouble was due to this fungus. It was found later that the trouble was due to a different fungus, and that the *Fusarium* was a contamination which developed during the transit of the specimens.

The bud-rot has been found in greenhouses in Lincoln, Beatrice and Omaha, Nebraska, and is known to occur in the State of New York. The fungus which is the cause of the trouble has been described by Peck and he has examined our cultures and reports as follows:

"I consider the specimens referable to *Sporotrichum anthophilum* Pk. They show the characters nicely."

On January 9 of last year a letter was received from Professor H. E. Hodgkiss, Geneva, N. Y., asking for information in regard to the bud-rot which was reported in Nebraska. He stated that the accompanying mite or a near relative had been sent to him. The fungus present with the mite was determined by Professor F. C. Stewart as *Sporotrichum anthophilum* Peck. Also, April 30, in compliance with the request of Professor Hodgkiss, specimens of carnation buds affected with the disease under consideration were sent to him by the writer for comparison with the New York specimens. Not until August 1 was the information received that the Nebraska and New York mites appear to be identical.

Symptoms.

The bud-rot of carnations produces effects which show externally, the character depending upon the extent and severity of the infection. The most striking external symptom is the failure of the affected buds to expand into perfect flowers. Carnation benches in which the bud-rot is prevalent generally show a considerable number of flowers that will never open completely. Sometimes the affected flowers deviate only slightly from the normal. Flowers which have a split

The Mite Accompanying Bud-Rot of Carnations
From Bulletin 103 Agricultural Experiment Station of Nebraska.

calyx may resemble these superficially in the unfolding of the petals. In buds in which the infection is more severe or begins at an earlier date, the petals become only slightly expanded and the buds die without ever developing into perfect flowers. If such affected flowers are not picked off, the projecting portions of the petals wither and turn brown and the calyx soon dies also, and assumes a brown coloration. In a few cases the buds are apparently infected at a very early stage, for the calyx does not open sufficiently to allow any projection of the petals, but turns brown and dries up.

All affected buds show upon closer examination that all or part of the flower parts included within the calyx are affected with a rot which has caused a brown discoloration and a softening of the tissues. In some cases the spaces between petals show a whitish hyphal growth plainly evident to the eye, while in other cases no hyphae can be detected without a microscopic examination. When affected buds are broken open, oblong watery-looking objects, 1-12 inch or less in length, are found buried in the soft mass of rotting petals or lying between them. These objects are the distended abdomens of minute female mites, which have been found as constant accompaniments of the fungus. In the earlier stages of the rot in natural infections the mites may be quite small and inconspicuous, but in well-developed cases of bud-rot they are so evident that they could not be easily overlooked.

Prophylaxis and Treatment.

The bud-rot can easily be prevented from becoming severe, if it is introduced into a house, by pursuing the proper measures. The most successful growers of carnations have little to fear from this disease, as conditions in the well-regulated houses are unfavorable for

the spread of the disease. Even though the disease is present it will not become general if proper precautions are observed. In order to test this by direct experiment, *Lawson* carnations were obtained from a house where the disease was especially prevalent and then grown for a time under conditions as favorable for the disease as possible, that is, by overwatering and allowing the accumulation of cuttings, rotting buds and other debris. After the disease was well established the watering was made less frequent and a less amount of water was employed, while the benches and surroundings were kept free from decaying organic remains. All affected buds were removed as soon as observed and at once destroyed. By pursuing this method the disease was entirely stamped out. The treatment recommended was followed in one large commercial house with very satisfactory results.

The work which has been carried out up to the present time leads to the conclusion that the disease can be prevented or eradicated if the following measures are carefully heeded:

1. Practice clean culture with the destruction of all refuse that might offer a temporary lodging place for either fungi or mites.
2. Keep the moisture down to the minimum necessary for the healthy growth of the plants.
3. Pick off all affected buds as soon as they appear and destroy by burning. Do not under any conditions throw them down on the benches. The benches should be gone over at least every other day until the disease is thoroughly under control.

Other Carnation Diseases.

The carnation is attacked by a considerable number of diseases which affect the roots or stems and foliage, but only a few were known to affect the buds or flowers. The diseases are due in the majority of cases to fungi, bacteria playing a very insignificant part. The following are the principal diseases that have been described.

1. **THE STEM ROT.** Two different types of this disease have been studied by Stewart and Sturgis, due to a *Fusarium* and to the sterile fungus *Rhizoctonia*. What is probably the same *Fusarium* disease has been studied by Delacroix and the causal organism determined as *Fusarium dianthi* P. Bill. and Delac. A somewhat similar trouble has been described by Atkinson under the name of "carnation rosette."

2. **BACTERIAL SPOT.** A true bacterial spot disease of the foliage has been described by Woods, while the disease formerly described by Arthur and Bolley as "bacteriosis" has been shown by Woods to be caused by the punctures of aphides and thrips and has been named "stigmose."

3. **ANTHRACNOSE.** Three different writers have described an anthracnose of carnations affecting stems and leaves: Halsted found the disease to be due to *Colletotrichum dianthi*. Atkinson attributed the anthracnose which he described to a species of *Colletotrichum*. The anthracnose which Cooke described as occurring in England was attributed to *Gloeosporium dianthi*. It is quite probable that the causal organism is the same species in all three cases, but it can hardly be considered as proved in the light of present information.

(To be continued.)

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1708 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. All orders for New England States will receive our most careful attention. We are centrally located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction guaranteed. Established twenty years.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

A Brilliant Wedding Decoration.

One of the most important weddings of the season took place last week, and while a large quantity of flowers and plants were employed in the decorations, the house being one of the largest in the city, the arrangements were characterized by a simple elegance and style, thoroughly in keeping with the magnificence of the surroundings.

The main entrance hall, which is fifty feet high, was decorated with groups of specimen kentias and rhododendrons; these were arranged on all sides of the hall, the palms forming a mass in the background, with the rhododendrons as a continuous border, the plants being placed at an angle to hide the tubs and pots.

The first room to be decorated was the "grand salon"; the dimensions of this room are 60 by 75 feet, and 40 feet high. Four large groups of palms were arranged at equal distances from each other, and about 15 feet in from the corners of the room, each group being surmounted with a specimen kentia, which almost reached to the ceiling. These groups measured about 12 feet across at the base, and were banked on all sides with pink camellias, the beautiful glossy green foliage and

in formal designs, sprays of orange blossoms being mingled with the fern. Orange blossoms were also used in the finger bowls.

The guests' tables, fifty in number, were placed in the various rooms immediately after the ceremony. The decoration of these tables was in accordance with those of the room in which they were placed. Those surrounding the bride's table were done in white lilac and cypripediums; in the large salon all tables were decorated with Killarney roses and lily of the valley, in keeping with the rhododendrons. In the main entrance hall, vases filled with the Japanese double-flowering almond made a most effective combination. As yellow was the predominating color in the room where the ceremony was performed, Azalea mollis, in its varying shades, made an attractive display. D. RAYBUN.

SPANGLED ARTIFICIAL FLOWERS.—Artificial flowers and leaves ornamented with metal spangles are dutiable at the rate of 50 per cent. ad valorem under paragraph 425, tariff act of 1897, relating to "artificial * * * leaves, flowers," etc., and not at 60 per cent. ad valorem under paragraph 498, relating to "articles * * * in part of * * * metal" according to a recent ruling of the United States General Appraisers.

The Tammany Tiger in Flowers.

At a banquet given in honor of "Little Tim" Sullivan by a number of prominent Tammanyites recently in the banquet hall of the Hotel Knickerbocker, several unique ideas were introduced by

The Tammany Tiger in Flowers.

Artist, James Meiklejohn, Floral Manager, Knickerbocker Hotel, New York.

the superb coloring of the flowers making a charming effect. Suspended from the branches of the tall central palms were plants of *Phalaenopsis amabilis* and *P. Schilleriana* in great profusion. At the north end of this room the musicians were seated. They were hidden by a screen formed entirely of white lilac in pots; these were arranged in three tiers, reaching a height of about eight feet.

This room led into another and somewhat smaller one, where the ceremony was performed. A succession of aisle posts connected the two rooms and formed a pathway to the temporary altar. Forty aisle posts were used for this purpose; these were connected by garlands of lily of the valley and strings of asparagus, each post being finished with a large bouquet of lily of the valley and white orchids, the latter hanging in showers to the floor.

At the end of this room an immense arbor of ferns was arranged, with orchids and masses of gardenias. Around the sides of the rooms *Adiantum Farleyense* was banked from the floor to the height of about eight feet, with clusters of *Oncidium splendendum* placed at varying distances.

The mantels, four in number, were also banked with *Adiantum Farleyense* with sprays of *Acaea pubescens* falling over in golden cascades. The *Frie-Dieu* was gracefully hung with garlands of orange blossoms.

The bridal table, at which twenty-four were seated, was tastefully decorated with white orchids combined with orange blossoms and *A. Farleyense*; in the center of the table a gold punch bowl two feet across was filled entirely with *Phalaenopsis amabilis*, only the natural foliage of the plant being used. At either end of the table two large gold vases were placed; these were filled with long sprays of *Phalaenopsis* and *A. Farleyense*. This fern was also employed on the table cloth

James Meiklejohn, floral manager of the hotel. The walls were hung with flags, bunting and Southern smilax, while in the gallery palms and palmetto leaves were used. At one end of the hall, standing on a platform in a miniature jungle, was a life-size Tammany tiger made of daffodils and carnations; and at the other end of the hall, directly behind the guests' table, was an illuminated model of the City Hall. The table decorations were Victory carnations and *Asparagus Sprengeri*.

The Brazilian Melon Fruit.

Editor Florists' Exchange:

In regard to the Brazilian melon fruit mentioned on page 102 I note what you say, and wish to thank both you and Newton J. Peck for the valued reply. The description as given does not entirely correspond with the plant. I had five plants about three inches high sent to me last April; took as good care of them as I could until now they are three feet high. The foliage is twelve inches long and nine inches wide, and very pubescent. The main stem has a color and odor similar to sumach. The plants have never flowered. The description I send herewith states the plant has a bushy habit, but mine is inclined to have but one straight shoot. Perhaps, if I knew just what treatment to give it, I would be able to push it along for satisfactory results.

Another important item is, whether the plant is true to name. I will keep you posted on how I succeed and give Mr. Peck the first ripe fruit I have, also give him a plant early in the Spring when the season is warmer to ship, if he cares to have it.

New York.

P. B.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

MANCHESTER, MASS.—The North Shore Horticultural Society held its annual dinner on Wednesday, January 29, and it was unquestionably a pronounced success.

METROPOLITAN MATERIAL CO.

Greenhouse Wreckers
1398-1408 Metropolitan Avenue, BROOKLYN, N. Y.

Introducers and growers of carnations who supply the trade with rooted cuttings will find this a very favorable time for placing an advertisement in THE FLORISTS' EXCHANGE.

New York.

The Week's News.

When describing a social event like the recent Vanderbilt wedding, the daily press may be pardoned for being sensational. It is the privilege of those who fill space in the dailies to be imaginative and make the matter they are writing about readable, even though the truth has to be avoided or enlarged upon at times. We cannot see, however, why the skilled (?) writer who supplies one of our Western contemporaries with its society news from this city should go so much the methods of the large dailies, because anything printed in a trade paper relative to the particular business which the paper represents is supposed by its readers to be true, and, if anything be written and printed that is untrue and misleading, it is likely to be injurious to some readers at least. So in order to correct certain statements recently made by our imaginative friend referred to, we would observe that at the Vanderbilt wedding there were no thousands of orchids used, nor were there any muffs used that were made of pearls, or any other flowers, for that matter.

The next meeting of the New York Florists' Club will be held on Monday evening, February 10, at the Murray Hill Lyceum, Thirty-fourth street near Third avenue. President Weathered intends calling the meeting at 7:30 o'clock prompt if there be a quorum present, so members who wish to enjoy the entire service should be there on time. The essay committee has provided an illustrated lecture on the subject of "Tree Doctoring," by John T. Withers. This, no doubt, will prove a most interesting feature.

The weather this week has been more than ordinarily severe for New York. The thermometer has at times gone pretty nearly down to the zero mark, and several lots of frozen flowers have been noted in the wholesale district. As we have previously remarked, extremes of weather always have a very bad effect on the flower trade, and this week has been no exception to the rule; business has been more than ordinarily quiet.

Thomas Young, Jr., for many years has been located at 11 West Twenty-eighth street; recently a fire broke out in his store, so he has moved his stock and business to his Fifth avenue store, which is located near Forty-second street. The store which he has vacated has undergone alterations and will be opened on Monday, the 10th inst., by Millang Brothers. This firm consists of August and Charles Millang, both of whom are well known to the trade. Charles Millang, who is at present located at Twenty-ninth street, will eventually close up that place of business, discontinue the plant department and devote his entire time to the wholesale cut flower trade at the new premises.

The postponed creditors' meeting of the firm of Hicks & Crawbuck, 75 Court street, Brooklyn, will be held at the office of the referee, 25 Court street, on Wednesday, February 26.

The first annual ball of the Greek-American Retail Florists' Association, which was held on Friday evening, January 31, was pronounced a grand success by all who attended; several wholesalers were present, and speak highly of the affair.

Joseph S. Fenrich, wholesale florist, at 110 West Twenty-eighth street, has fully recovered from his recent accident and is attending business daily.

J. K. Allen, 106 West Twenty-eighth street, is, we are sorry to say, confined to his home with a severe cold.

The New York Market Florists' Association has obtained permission to use the space on Canal street for market purposes again this Spring. They will erect tents, as has been the custom for the last few years, and conduct business under canvas, which, although not perhaps as comfortable as a good market building would be, is a great improvement over being outdoors.

Last Saturday, February 1, A. D. Rose of Montclair, N. J., suffered a severe loss to his greenhouse by fire, which broke out at 1 a. m. The fire originated near one of the boilers and was discovered by the night watchman and an alarm sent in. The firemen responded promptly, and everything possible was done to keep the greenhouses protected from the cold, but the injury to the plants and flowers was considerable, in

addition to the \$200 damage done to the building.

A. J. Guttman, wholesale florist at 43 West Twenty-eighth street, is suffering from a felon on the thumb of his right hand. While attending the American Carnation Society's convention at Washington, D. C., last week, Mr. Guttman's thumb became so painful that he had to go to a hospital and have it treated.

The regular monthly meeting and lecture of the Horticultural Society of New York will be held in the rooms of the American Institute, 1921 West Forty-fourth street, on Wednesday, February 12, 1908, at 1 o'clock p. m. Dr. E. M. East of the Connecticut Agricultural Experiment Station will open a discussion on the "Improvement of Plants by Sporting" illustrated.

Philadelphia.

Club News.

The Florists' Club meeting on Tuesday evening last was very largely attended, the evening's feature being the paper by Edmund A. Harvey on the "Indoor Culture of Carnations." This paper proved very interesting and will be found in full in this issue. The essayist backed up his theories advanced in

Charles C. Leedle, President of The Leedle Rosary Co., Springfield, O.

the paper by an exhibit of ten varieties of carnations, nine of which had been grown entirely by the indoor culture system. The varieties exhibited were Winsor, Lady Bountiful, Beacon, Enchantress, Robert Craig, Victory, White Perfection, Mrs. Lawson and Aristocrat. They were all very fine flowers on long stiff stems, Lady Bountiful being the only variety which had been grown outdoors.

Other exhibits were a vase of fifty blooms of the new pink seedling No. 100 from Joseph Heneock Company; this variety received a certificate and first prize at the recent Carnation Society's convention. It is undoubtedly a coming variety, the flowers being large, stems stiff, and it is a great producer.

Samuel Batchelor, gardener to Mr. C. B. Newbold, staged some very fine flowers of the following carnations: White and Pink Enchantress, Lady Bountiful, and a few flowers of a sport from Lawson, of a bluish pink color evidently a very promising variety. This same exhibitor showed two plants of Cyclamen giganteum, very large flowers, pure white in color. The plants were in 6-inch pots, foliage perfect, showing good culture. One seed from which these were raised was procured from Sutton & Sons, Reading, England, and was sown in September, 1906.

Edward A. Strand, as usual, came to the front with a grand exhibit of carnations. He staged Winsor, Lady Bountiful, Beacon, Enchantress and Mrs. W. Burnett. The latter variety is one of the European productions. It came from the Island of Guernsey. It is light pink in color; flowers are of good form but from present indications the plants have not proven very productive.

A very interesting exhibit, and one that attracted much attention was that of the new *Clematis indivisa* exhibited by Henry A. Dreyer, Inc. This variety comes from New Zealand, and is being flowered here now for the first time. It is an indoor sort and blooms under glass in a carnation temperature during January, February and March. The flowers are borne in large graceful clusters, similar to those of *C. paniculata*, except that each flower stands out by itself, the flowers being one to one and one-half inches in diameter. The foliage is a dark, glossy green, very similar to that of wild smilax. This variety should prove a great acquisition for decorative work. Instead of being staged in vases this exhibit was placed on the chandelier and was indeed very beautiful.

The paper on carnations brought out considerable discussion. Albert M. Herr stated that he thought the first one to try indoor culture was Edwin Lonsdale, and while several others had been credited with being the first to start this method, he thought the credit belonged to Mr. Lonsdale. In answer to this Mr. Lonsdale stated that he grew carnations entirely indoors seventeen years ago. At that time he was growing the variety Grace Battles. He had some late cuttings taken early in June and grow these along entirely under glass. When bringing his other plants in from the field they were so badly diseased that in order to make the benches look better he planted the indoor grown plants among the field-grown ones and they not only did better but did not take the disease from the field-grown plants. He then saw great possibilities for this method of culture, and the following year tried Enticement with equally good results, and later on grew Helen Keller by the same method, but at that time he gave up growing carnations and so never followed up the culture.

Edward A. Strand said that he had become convinced that while the indoor culture was best for many varieties, it was best to adopt a compromise system. He had adopted that this year with good success. For instance a variety such as Beacon did not prove very profitable after Easter. He, therefore, emptied his house and planted in some varieties that did best by indoor culture. By this method he kept on planting from April until September; for three months he would be planting indoor-grown plants, following that up by plants from the field. By this method a grower did not entail upon himself the enormous work of having to empty all his houses in a short space of time, and it also enabled the grower to keep some varieties in and derive profit from the June business. He also thought that the indoor culture could be only carried on successfully by a grower who had side ventilation to his houses.

In regard to side ventilation E. A. Harvey stated that in his experience double ventilation at the ridge was better than side ventilation, as it kept the houses cooler and did not create a draft, which in Summer time dried out the benches too quickly.

At the next meeting of the club, on March 2, J. O. Thilow, of Henry A. Dreyer, Inc., will give a talk on his recent trip through Europe. The essayist being a keen observer and a good talker, will no doubt be the means of bringing out a large attendance at the next meeting. Dawn Rust.

SPRINGFIELD, O. The Leedle Rosary Company was incorporated at Columbus under the laws of Ohio on February 1, 1908, the incorporators being Charles C. Leedle, Charles P. Brunner, Henry J. Roth, Mark M. Livingston and James Sager; capital stock \$10,000. A location adjoining the premises of the Leedle Floral Company has been selected, and houses will be erected this Spring in which cut flowers will be grown for the trade in nearby markets, which can be quickly reached by the six leading express companies over steam routes as well as over the network of interurban lines centering at Springfield. Bride and Bridesmaid will be planted in the first houses, to be followed by other varieties later.

Charles C. Leedle will be president of the new company, and Arthur C. Leedle in charge of sales and shipping, while a competent grower will ensure a high grade product in due season. G. E. O.

CARNATIONS

Indoor Culture.

Read before the Florists' Club of Philadelphia, February 4, 1908, by Edward A. Harvey, Brandywine Summit, Pa.

There is probably no cut flower the methods of culture of which have changed more in the past six or seven years than the carnation. When we began growing carnations, six years ago, we benched from the field about the middle of September, as this was the universal custom among Chester County carnation growers, and generally so throughout the United States, although some of the large growers around New York were practicing early planting. Now from the middle of July to the middle of August is generally conceded to be the proper time to house from the field.

The next development would naturally be indoor culture exclusively. To the writer's knowledge the first grower who practiced this method to any extent was Charles W. Ward, Queens, L. I., who has always been a leader in the development of the "divine flower." I well remember seeing in 1903 at Mr. Ward's range a house of Enchantress that had been grown inside over Summer and was struck with amazement at their magnificence. I do not think that I have ever seen them surpassed by any variety.

To succeed with indoor culture, strong, healthy cuttings should be put in the sand not later than February first; those potted up before February fifteenth are preferable. We first use 2-inch pots, then repot in 3-inch, and when these are well filled with roots, plant in a bench four inches apart each way. Some growers again repot from 3 to 4-inch pots and hold them in these until they are finally planted in the benches. When many plants are grown this method makes a great deal of work in watering, as the pots dry out very rapidly when hot weather comes, and the young plants are also liable to become pot-bound before the benches are ready for them. When their growth is once stunted they are practically useless. At each transplanting all the weak plants should be set aside. A weak cutting may recover in the field, but will never pay for itself grown inside.

As soon after Decoration Day as possible the old plants should be thrown out, the houses refilled with a good rich compost and the young plants put in their final place.

Care must be taken with the watering. There is not much danger of over-watering in Summer, still the benches should not be allowed to become soggy. Far greater danger is in allowing the soil to get too dry; as soon as it begins to appear a light color on top it should be wetted thoroughly, otherwise the plants will become hard and woody, and will not break freely.

Although it is generally advised against shading, we believe a light shade is beneficial, and put a thin coating of whitening on every other row of glass about the first of July, and remove it early in September. This will aid materially in keeping down the temperature and will not cause a weak growth unless the plants are over-watered.

Full ventilation should be given both day and night, except when a strong dry wind is blowing immediately on the plants, which dries out very rapidly both plants and soil, and is very likely to bring on an attack of red spider. This

NEW CRIMSON CARNATION HARVARD

New Carnation FAUST (BRILLIANT SCARLET) This novelty very fine for commercial use, owing to its extreme productivity; a fine one for Christmas trade. Color, form, stems, habit and productiveness all that can be desired. Price \$6.00 per 100, \$50.00 per 1000. Usual discount on large orders.

Mr. J. D. COCKCROFT, Northport, N. Y. Dear Sir—We desire to congratulate you on the two varieties of Carnations, GEORGIA and HARVARD, which you have been sending us. Georgia we consider to be the best white carnation that comes to New York, and can easily sell from 50c to 100c more than regular white. Harvard we think to be the best dark red coming here, easier to sell at double the price of any other dark red. With kindest regards, we remain, Yours truly,

ADDRESS ORDERS TO JAMES D. COCKCROFT, Northport, L. I., N. Y. REMEMBER WE GUARANTEE SATISFACTION

The color of this novelty is a very rich crimson. The blooms are of the finest as to size and quality and the habit is free and continuous, every shoot producing a flower with a calyx which we guarantee as non-bursting. Blooms borne on long, wiry stems from 24 to 30 inches and over. Price \$12.00 per 100, \$100.00 per 1000. Usual discount on large quantities.

Standard Varieties

Strong, Healthy, Rooted Cuttings

Table with 3 columns: Variety Name, Price per 100, Price per 1000. Includes varieties like Winsor, Rose Pink Enchantress, Enchantress, Lawson, Queen, Victory, Queen Louise, Red Sport, Pink Patten.

insect is about the only one that will cause trouble in the Summer and a thorough spraying with cold water twice a week will, we have found, keep down this pest. Should it appear, however, the plants should be sprayed every day until they are clear, as the red spider will cause a great deal of damage in a very short time, from which it will take a long time for the plants to recover.

The same care should be taken in pinching as in the field. Do not break back too high, as this will cause a top-heavy growth, and the plants will be broken up by the spraying. As soon as the shoots begin to elongate and show the stem between the leaves, the top should be taken out, leaving three or four joints. Do not leave the plants two or three weeks and then break off all the shoots at once, but go over them every week, topping all the longest ones. This will make a more even growth and lessen the tendency toward cropping.

The benches should be frequently cultivated during the Summer, both to keep down the weeds and to prevent the surface of the soil becoming hard and baked.

If the soil was well fertilized with cow manure and bone meal before it was put in the benches, no feeding will be necessary during the Summer. Through the Fall we use top dressings of bone meal and sheep manure every two or three weeks, omitting all feeding through December. In January when the days become longer and we get more sunshine, we use a stronger and quicker acting commercial fertilizer. Feeding with liquid manure would doubtless be beneficial, but we have never adopted this method.

If by the first of July the plants in the houses are as large as those in the field, you may consider that you have been successful, for, although through July and August the field plants will make a faster growth than the indoor stock, these will catch up later. There is always some check upon plants benched from the field, and often it is very severe if the conditions are not right; this is especially the case in a wet season.

One of the greatest advantages of indoor culture is the fact that we have control of the watering, and this is especially important since stem rot has made its appearance. How often does it happen that half of the plants die in the field and again half of those remaining, after they have been planted in the houses, and it is nearly Spring before we begin to cut good flowers! With proper indoor culture the ravages of the dreaded stem rot are reduced to a minimum.

Another advantage of this method is that large flowers with long stems can be cut early in the Fall, when they bring good prices and when none of the profits go into coal bills. A steadier cut is also assured through the Winter, and the danger of getting a heavy crop, when prices are low, is diminished.

Some varieties are undoubtedly better suited to indoor growing than others. As a rule, the broad-leafed, strong-growing kinds are best adapted to it. Mrs. Lawson and Winsor are notable examples, in fact, we would not attempt to grow them any other way.

The greatest objection offered to indoor culture is the fact that the June cut is lost. However, at this time carnations bring very low prices, and after all the problem is how to make each square foot of bench surface produce the most money. If we can make the returns through the Fall and Winter more than cover the loss during the Summer by indoor culture we are foolish not to adopt it.

WINONA

The True Pink Carnation for 1908.

A color that attracts attention. Once seen, always wanted

Comes nearest to Flancee, but is a different type flower. Never Bursts—Every Calyx Perfect. Good, shapely, active growth. Blooms early and in quantity. A grand commercial variety. Give it a trial and compare the returns. We have a large stock, clean and healthy. Will guarantee every cutting to be first-class. Order now for early delivery. Price, \$12.00 per 100; \$100.00 per 1000. Larger lots, prices on application. With our additional glass we have more than doubled our stock our stock of Carnation plants, and can fill orders for rooted cuttings to even better satisfaction than in past years.

VALLEY VIEW GREENHOUSES, Marlborough, N. Y. VELIE BROS., Props.

It is not urged that this method is an easy way to success in carnation growing. It certainly will not help that grower who is used to letting the plants take care of themselves.

I should not advise anyone to change his whole plant immediately from one method to the other, but first try a house, or at least a bench, and prove for yourself which way is the better under your conditions. Some of the largest and best growers in the country practice indoor culture exclusively, many others in part of their plant, and they certainly would not do so if it did not pay them. When any new method of doing things is taken up by the leaders in the trade, we owe it to the success of our business to see for ourselves at least if there is anything in it, otherwise we shall soon be bringing up the tail of the procession.

VICTORIA

NEW SEEDLING, crossed by Lawson and Harry Fenn, the color of Lawson and the long stem of Harry Fenn; it is more prolific than either, Lawson is past. Victoria is better than Lawson ever was, and gave us last Winter from 20 to 95 per cent, more blooms each month. It is very healthy and a nice grower. I have two houses of it, and it is a sight to see the buds and blooms. It brings more money in the market than Lawson. Read below what J. A. Budlong & Sons Company of Auburn, R. I., say of it. They are growing it this Winter. J. A. Budlong & Sons Company are one of the largest market gardeners in New England, also the largest rose and carnation growers in Rhoda Island.

December 10, 1907.

Mr. J. H. Cushing, Quiddick, R. I. Dear Sir: We have 1175 plants of your new seedling Victoria carnation which we planted in house the last of July. They

have made fine plants and we think now will produce as many flowers, if not more, than any carnation we ever grew. The stems are stiff and good length. The flower is also a good keeper.

We have sold these flowers in several instances to some of our best trade in Boston, who thought they were a long-stemmed Lawson.

Up to date, we have cut 4768 flowers from the 1175 plants, and there are as many buds in sight to-day as there have been any time since we started to cut. In other words, the cut has been very uniform and looks as if it would continue so throughout the Winter.

We do not think that you will make any mistake by putting this carnation on the market. Yours truly,

THE J. A. BUDLONG & SONS CO.

Price of Victoria rooted cuttings, \$75.00 per 1000; \$8.00 per 100; 250 at 1000 rate.

REVIEW OF THE MARKET

NEW YORK.—The weather is too cold for business. With the exception of roses there is a heavy supply of everything, and prices are on the downward grade. American Beauty are not plentiful and small lots in the beginning of the week touched the dollar mark. Bride and Bridesmaid are scarce; consequently, values remain fairly firm, though the lower grades do much better, proportionately than the fancy and extra grades. Carnations become more plentiful every day, and prices are far from what they usually are at this time of the year. Lilies are getting more plentiful, and other bulbous stock, such as narcissus in several varieties, tulips and freesias are all coming in quite heavily and are meeting with a very poor demand. Violets have to be sacrificed fearfully in order to make clearances, the extreme cold weather makes it impossible for the street merchants to ply their trade, consequently there are many thousands of violets on hand continuously. Lily of the valley is abundant and is bringing very unsatisfactory prices. Green goods fared no better than flowers, being in very poor demand. In fact, take the whole market right through, there is nothing clearing out except roses, and the reason for this is more on account of their scarcity than from any increased demand. It would take but a little increase over the present supply to bring rose prices down to the level of carnations and other flowers.

BOSTON.—Trade is dull, in fact, this city has not seen it in a worse state at this season for some years. All kinds of flowers are very abundant and there is little call except for funeral work among the retailers, consequently the wholesalers and growers are the sufferers. Roses are not so plentiful as other flowers, and prices of these keep up better. Carnations are very plentiful, but white are more in demand than colored. The call for violets has diminished on account of the severe weather. Narcissus are druggish. Lily of the valley is plentiful, so are sweet peas. There is a good supply of lilies. There is a fairly good demand for greens of all kinds. J. W. D.

INDIANAPOLIS.—Movements of vast proportions are not occurring in the flower business here. Severe weather has caused a falling off in counter trade. Prices maintain their high standard of last season in a fine manner, everything considered. Carnations, particularly, are always in demand at \$3 to \$5 per 100. Stock, such as sweet peas, blues, pansies, etc., sell more readily than the staple articles. Prime Bridesmaid, Bride and Richmond roses are offered by the growers at \$6 to \$8 per 100. American Beauty are selling better at \$5 to \$10 per 100, \$1.50 to \$3 per dozen is the retail price. Home-grown violets are not in sufficient quantity at 75c to \$1 per 100. Cattleyas and cypripediums are finding a slow sale at market prices. Fine specimen plants are arriving in liberal quantities, so that elegant window displays and fancy sales should be in order. I. H.

CHICAGO.—The severity of the weather of the second half of last week has had the effect of diminishing the supply of cut flowers considerably, except of certain varieties of bulbous stock, which appear to be as plentiful as ever. Roses are in short supply all round, and prices have advanced accordingly. American Beauty have suffered to a large extent, and the shortage has been more particularly felt in this market through an unusual demand from the East, the high prices and short supply in the New York and Philadelphia markets having resulted in some good orders being placed here. Bride, Bridesmaid and Killarney are in excellent demand. Long-stemmed stock is not particularly plentiful but perhaps quite sufficient for the business offering. Short stock is selling well, and brings good prices. White roses are least in supply. Carnations are strong at quoted prices, because a truly less plentiful. Anemons are still quite heavy, but clean up better. Tulips are not quite so abundant, but come in in quantity quite sufficient to meet the demand, which is not very active. Violets are plentiful, and arrivals from New York are slightly bet-

ter in quality, though without improvement in values; in fact, top prices have declined a few points. Lilies are in better supply and bring good figures. Lily of the valley is coming in well, and continues to show improvement in quality, selected stock overtopping maximum quotations. Callas sell well, and move quickly. Mignonette is doing better, mainly because receipts are smaller. Paper White narcissus drags less than of late, arrivals being lighter, but among so much white stock offered, higher prices are hardly possible. Daffodils are very plentiful, and hang fire somewhat. Some excellent sweet peas are coming in now, the best selling freely. There is an excess of short-stemmed stock, however, which is hard to move. Tulips are much finer in quality, plenty of really good flowers being now in evidence. Fine red sorts bring the highest prices, and are to be had with good long stems. J. H. P.

ST. LOUIS.—Business of late has been fairly good. There is plenty of funeral work. We will have six weeks more of winter, as February 2 was a beautiful clear day. Last week we

to \$12.50 per 100. Sweet peas, when long in stem, sell at \$1 per 100. Jonquils and Von Sion bring top prices. Smilax and asparagus sell best of any greens. ST. PATRICK.

CATALOGUES RECEIVED.

W. D. BURT, Dalton, N. Y.—Illustrated Catalogue of Flower and Vegetable Seeds.

HENRY NUNGESSER & COMPANY, New York.—Complete wholesale price list of American and Imported Grass and Clover Seeds.

MISS C. H. LIPPINCOTT, Minneapolis, Minn.—Illustrated Catalogue of Flower and Vegetable Seeds.

The Florists Exchange acknowledges, with thanks, receipt of calendars from the following firms: Adams the Florist, Newtonville, Mass.; Archias Seed Store, Sedalia, Mo.

BUSINESS DIFFICULTIES.

PITTSBURG, PA.—An involuntary petition in bankruptcy was filed in the United States district court January 27, 1908, against Lincoln I. Neff, florist, of 218 Sixth street. He resides at Springdale. The claims of the three petitioning creditors amount to \$4,100.

A Compact Road Outfit.

The illustration herewith shows the sample line of florists' supplies which F. J. Farney, traveling representative of the A. L. Randall Company, Chicago, manages to carry in two trunks and a sample case. The photograph, which was taken in Detroit, shows Hugo Schroeter of that city looking over the line.

Sample Line of Supplies Shown by A. L. Randall Company's Traveling Salesman, F. J. Farney, While on the Road
Hugh Schroeter, Detroit, Looking Over Samples

had one great day to sell carnations. McKinley Day. Colored stock sold well at advanced prices, some going as high as 6c. for extra fancy. The wholesalers say that they have been short on white roses all of last week, with a great demand for same; in fact, roses of all kinds are scarce, except American Beauty, which seem very plentiful in all grades. These run from \$2 to \$3 per dozen for fancy, and down to as low as 50c to 75c for short grades. Bride and Ivory went up to from \$5 to \$10 per 100 owing to scarcity. Richmond and Killarney, from \$4 to \$8; \$10 for extra fancy.

Carnations, in fancy grades, run as high as \$5 per 100. White are selling out clean. There is a great deal of colored stock in the market to-day (Monday, February 30), with prices at from \$2 to \$3 per 100. California violets are in better demand and are not overstocked at present; top price is 10c per 100. There is a great deal of extra fine bulbous stock in the market which had some call last week. Tulips (white) sell best at \$2 to \$3 per 100; Roman hyacinths and Paper White narcissus, \$1 to \$2. Lily of the valley, \$3 to \$4. Callas and Harrisii lilies, \$10

Washington, D. C.
Convention Echoes.

Among the late arrivals at the recent exhibition of the American Carnation Society were some good seedling carnations from Thos. J. McCormick, Baltimore, Md. There were two cases of a good white, and one of pink. The exhibitors of Rhea Reid and Mrs. Jardine roses may well feel proud of the most excellent condition in which these flowers kept. They kept sufficiently well to occupy a prominent place on the banquet table on Thursday night. The majority of the carnations had gone to sleep on Wednesday night; this hastened the free distribution to the public who flocked in, soon cleaned up everything in sight, and looked around wistfully for more. At this crisis a Washington florist mounted a stage, clapped his hands to silence the crowd and announced in "honest injun" style that a free distribution of plants was going on upstairs. This sent the crowd surging for the upper hall, where darkness greeted them. Professor Charlemagne Koehler, who so ably entertained the American Rose Society at the banquet here last March, and who has since contributed his services on various occasions to the local Florists' Club, acted as chief entertainer at the banquet given the Carnation Society. Professor Koehler is a most wonderful entertainer, and no doubt one of the very best in this country, his repertoire covering a wonderfully large field. The art of expression has been his life study and in this, dramatic art, and recitation, his equal has not been found in Washington. He was five years with the Booth-Barrett Company, where he took many important parts before some of the most critical audiences. He is a born artist and has done much for the entertainment of florists from all over the country and is most highly esteemed in Washington. Very high, cold winds have prevailed, and if we are to accept the theories of our grandfathers, real Winter is just beginning and there is enough to satisfy all. Social functions are creating the usual demand for flowers at present, and home-grown stock is fairly abundant. J. F. CALVERY

Cincinnati News Notes.
 Saturday night, February 1, was probably the worst proposition the growers have ever been up against in this vicinity. The wind blew a gale all night and the thermometer dropped to zero. Firing was rushed to the limit and the boilers had to be worked to their utmost capacity. B. P. Critchell suffered considerably, about ten feet of each house being frozen. Others had all they could do to keep out the frost. Mr. Critchell has been in bed for the past two weeks with a severe attack of sciatic rheumatism, and at this writing, February 3, is no better.
 Business is only fair and stock is scarce, but is cleaned up nicely daily at good prices. Funeral work is the only stimulus to trade; no weddings, receptions or other society events.
 Tom Joy, Nashville, Tenn., was a caller during the week. He was on his annual inspection tour, taking in Richmond, Cincinnati, New Castle, Knightstown and Lafayette, Ind., and his report on the establishments visited was very flattering, especially so of the debutantes of the divine flower.
 I am glad Indianapolis is the city chosen for the 1909 meeting of the Carnation Society. We all know what the Indianapolis and Indiana boys can and will do; as entertainers they are second to none, and their German House is the finest in the whole country for staging the show and holding the meeting. The society can congratulate itself on having again the opportunity of meeting in Indianapolis. Brother Baur, vice-president-elect, is the right man in the right place, a hustler, as well as a good fellow, conscientious and not afraid to soil his hands, and he has a score of able assistants to help make everything a success.
 Mr. O'Neill, representing Vaughan's Seed Store, was in the city looking after the interests of the firm.
 I was much pleased in looking over the report of the meeting of the American Carnation Society to see that Dick Witterstaetter was strictly in it with Afterglow. Alma Ward seems to be able to remain at the top of the ladder, the same as her father. I failed to see any notice of the white carnation Sarah Hill. What's the matter with Charles Knopf? A good thing like this should not be in the background. E. G. G.

Chicago.
The Week's News.
 Business for the month just closed was far from unsatisfactory, although perhaps a few removes from the normal. Increased production, with more than ordinarily heavy crops, was a factor which governed values very largely during the month, consequently the volume of trade done in wholesale circles does not quite approach in the aggregate of values the business of the corresponding period of last year. Retailers in general have had a pretty fair month's trade. There was a noticeable paucity of orders for decorative work, but this condition has been more than counterbalanced by an unusually heavy demand for funeral work. With comparatively low prices for cut flower stock during the month, very little difference between the trade of January, 1908, and January, 1907, is noted by the majority of retailers, as far as average profits are concerned.
 John F. Kidwell & Brother, Wentworth avenue, kept the stock in their fifteen greenhouses in active movement during January. They have now a quantity of lilies in bloom, all of which are being used for their retail trade. Their lily stock for Easter embraces about 6,000 pots, most of which already is showing quality. Nephrolepis Whitmanii is grown very largely, parent stock filling one house almost completely. Fronds from this stock are cut for use

in design work and bouquets, for which the fern is well adapted. There is also a quantity of plants in 6 and 7 inch pots. A house of Baby Rambler roses is in fine condition and should be just right for Easter. The Boston fern is also in good supply here, and is said to move rapidly at all seasons. The largest house of the range contains some dracaenas in two or three varieties, Pandanus Veitchii, and kentias, all in first class shape. John F. Kidwell of the firm is building a new greenhouse establishment at Belmont on the Burlington road, near Morton Grove. Before the end of the season he will have a glass area of over 40,000 square feet. The frames of several of the houses are nearly completed. They all rest on concrete walls, and the boiler house and stack are to be of concrete. The range will be heated by steam from horizontal tubular boilers, with the Morehead trap double system. Glazing will shortly be proceeded with, about 65,000 feet of glass being already on the ground. Roses, carnations, smilax and asparagus are to be grown, and part of the range will be in operation early in Spring. The establishment when complete is to be conducted by a son and a nephew of Mr. Kidwell. There will be plenty of room for expansion, as the site is part of a 250-acre estate purchased last year.
 T. F. Keenan, 6112 Wentworth avenue, has been making a specialty of breeding goldfish during the last few years, and is working up a good grade,

both whole sale and retail. He shipped over 50,000 fish last year, and to points as far distant as New York, Philadelphia, Salt Lake City, Baltimore and the Far West. When the demand for flowers and plants is slow he "fishes" for business.

The Schiller establishment lost a valuable horse last week—a victim of pneumonia.
 Herbert Hastings, representing A. H. Hews & Company, Cambridge, Mass., is in town this week, as also is Wm. Hagemann of New York.

Secretary T. E. Waters of the Chicago Florists' Club is promoting the idea of holding a series of "smokers" during the remaining Winter months.

The E. F. Winterston Company is receiving a supply of orange blossoms daily.

Fritz Bahr, Highland Park, has returned from a tour through Cuba.

Reinold Schiller has been somewhat incapacitated for business for several days through an injury to his hand. Someone left a needle on his desk, and in giving his desk a vigorous thump the needle entered his hand wholly, leaving hardly a trace. It embedded itself in the muscle in such a way that X-rays and the knife were necessary for its removal, and he will have a bandaged hand for some time.

January 29 was McKinley Day, but carnation sales were not particularly heavy, not nearly so large as in previous years. It looks as if interest in the martyred President's favorite flower, as far as a memorial to him goes, is waning. Carnation Lodge, Knights of Pythias, observed the anniversary, and carnations were strongly in evidence for the occasion. The lodge gets its name from the fact that the carnation was McKinley's favorite flower.

St. Valentine's Day, February 14, is likely to bring with it an extra demand for cut flowers. H. R. Hughes, the Van Buren street florist, is cultivating a special demand for that day by the circulation of a four-page folder, attractively gotten up and embodying a St. Valentine story. Incidentally, the folder announces the preparation of "Special Valentine Boxes of Flowers" at \$1, \$2, and \$3 each, and suggests also the use of potted seasonable flowering plants. In addition, Mr. Hughes has a very fine window setting typical of the Valentine season.

The first document recorded in the new office of the county recorder was filed at 8 o'clock, January 27, 1908, by Miss Cecelia Cannon, 16 Grant place. This was an assignment of a lease from Henry Koropp to George M. Hingworth, for a nominal consideration. The property involved consists of the greenhouses, palm house and store, 100 by 152 feet, on the west side of Clarendon avenue, 143 feet south of Sheridan road. The original lease was from Albert Fuchs to Mr. Koropp. Mr. Fuchs granted a lease for five years from July 1, 1905, at \$65 a month for three months and \$70 a month for the remainder of the time. The lessee is granted the right to make five-year renewals of the lease at an increase of 5 per cent. in the rent.

Vaughan & Sperry are getting daily some extra fine quality double violets from the New York district.

It is understood that the committee appointed by the Chicago Florists' Club to arrange for quarters for the convention of the American Rose Society have not yet determined upon a suitable building, but will no doubt be able to make a satisfactory report at the meeting of the club next week. The rose growers here are taking great interest in the convention exhibition and it is expected that the exhibits of American Beauty rose to be staged by them will eclipse any staged at previous shows.

The Poehlmann Brothers Company are fortunate in having a good cut of almost all the varieties of roses they grow at the present time. Some Richmond received on Tuesday had 50 inch stems. The firm is shipping daily some very fine tulips, particularly Proserpine.

The new rose, Mrs. Potter Palmer, is in excellent shape just now, and a fine staging of it will be seen at the forthcoming exhibition. A nice shipment of stock of this rose was made to Great Britain recently.

E. H. Hunt is displaying a nice line of heart-shaped flower boxes, and fan and plant boxes, for St. Valentine's Day requirements. J. H. Parham.

News and Trade Notes.

The latter part of January finds us again in the midst of severe cold and stormy weather. For the past week and more blizzards have been raging, with the thermometer hugging the zero mark. The coldest night marked 8 below—the coldest of the season so far. Naturally, under these conditions stock does not come in very fast, and as there has been quite a large amount of funeral work going on nothing of consequence is carried over. Social affairs may be said to be quieter than usual; but shipping trade is good.

Inquiries among the retailers do not show any extra demand for McKinley Day and so far as its becoming an extra day for business the prospects are poor. I do not find much enthusiasm among the growers about the new carnations, either of last year's productions or those of the coming season. Beacon is well spoken of, and Winsor grows in favor. Aristocrat splits quite a bit, besides showing an ink tinge on the edge of its petals, which detracts from its beauty.

H. Fisher & Company opened a branch store in Battle Creek on January 28, which, according to the Battle Creek papers, caused considerable interest among the flower lovers of that enterprising city. Mr. Fisher says the prospects there are good for working up a satisfactory business.

W. C. Cook, late of the Central Nursery Company, expects to leave the city to journey to Alabama, where he has accepted a lucrative position with a nursery firm there. He takes with him the best wishes of the trade.

Miss Clara Dunkley, of the late Dunkley Floral Company, was married last week to a gentleman connected with the local press. S. B.

Boston.

The Week's News.

Frederic Law Olmsted was the speaker at the meeting of the Massachusetts Horticultural Society on Saturday; unfortunately it was a very stormy day and the attendance was not as large as usual. The subject was "The Treatment of Home Grounds," and Mr. Olmsted briefly outlined methods of making them attractive, creating considerable discussion at the end of the lecture. On February 15, the speaker will be John Dunbar, Rochester, N. Y., who will have for his subject "Hardy Conifers for Private Grounds."

William McGilivray, who has been for several years employed in Weld Gardens, Brookline, has taken the position of gardener to J. S. Bailey, West Roxbury.

P. H. Waechter, Walpole, is having a fine cut of sweet peas and violets at present which are selling readily in the hands of George Cartwright in the Park street market.

Thos. Pegler is suffering from a sprained wrist, the result of a fall caused by a defect in a sidewalk in front of the Park street church.

T. J. Butterworth has now a fine lot of Ladia anceps in bloom, as well as a quantity of the white variety. Mr. Butterworth finds a steady and increasing demand for all kinds of well-grown orchid blooms.

James Farquhar talked before the North Shore Horticultural Society on Thursday, his subject being "Hybridization and Breeding of Plants."

George W. Butterworth made a flying trip among the New Jersey orchid growers last week.

A. H. Hewes & Company, the world's largest flower pot manufacturers of Cambridge, are now running their factory to its full capacity after a partial curtailment for the past month, during which time they have made heavy additions to meet the constantly increasing demand for their goods. They have installed two new boilers, kilns, dynamo and special machinery for preparing clay. The firm has maintained for a number of years a large warehouse in Long Island City and has now opened a similar branch in Chicago to facilitate the handling of its Western business. The officials of the company have always in mind the welfare of their employees and have provided for their amusement a large recreation room, 25x35 feet, with pool and billiard tables and various other games and reading matter. The outlook for business is bright, and the prospects are that the plant will be run to its full capacity for the coming year.

The meeting of the Gardeners and Florists' Club on the 18th inst., will be carnation night. The principal speaker will be W. R. Pierson, Cromwell, Conn., who is well known as one of the brightest young men in the trade, and the February meeting will undoubtedly be the banner one of the season.

Wm. M. Robertson, a grower well known in this locality some years ago, died January 29, from an attack of pneumonia, aged 65 years.

Joseph F. Free, the well-known salesman in the Park street market, slipped on the ice on Saturday afternoon, breaking his arm in two places.
J. W. DUNCAN.

NEW BEDFORD, MASS.—Trade the past week has been very dull. Carnations are coming in of good quality; they retail at 60c, and 75c per dozen. Roses are selling for \$2 per dozen. Violets have been in very good demand, retailing at \$1 per 100. Some good bulbous stock is arriving.

H. A. Jahn is cutting large quantities of his carnation Lloyd; he is sending out large batches of cuttings.

S. S. Peckham, Fairhaven, is listing about thirty varieties of carnations; his range consists of about 12,000 square feet of glass.

Heating.

Growers' Problems Solved by U. G. Scollay.

We have a 30 horse-power tubular, bricked in, all new boiler, made by a first class maker, used for hot water heating. We have been running it since November. First, we had the stack, which is steel, 20-inch diameter 10 feet high, set on a 3-foot base about even with the boiler and connected to same with the smoke pipe. The smokestack drew dampness, so that water ran down it in streaks and checked the fire. The only remedy to relieve this somewhat was to let the fire burn with full draught, but as soon as we closed the damper it would sweat again. The pit, boiler and tubes are dry. We inquired in our vicinity what the trouble might be, but nobody could tell us. We then took the advice of our boiler maker, who puts up more stacks than any other man in our locality, but he never heard of a case like ours, advised to change it, thinking the dampness came from the boiler and set the stack directly on the boiler, but this gave us no relief whatever. Our plant is located on a high, dry, gravelly place and the stack is 10 feet above all obstruction.

We were told by some that the dampness came from the air, but why would this only affect us when these steel stacks are used with good results by others, a quarter of a mile from our place. Kindly give us your opinion if the dampness comes from the air or the ground, also if you have ever heard of a similar case? If not, could you direct us to somebody who could perhaps find the cause as to where the dampness comes from? E. J. F. CO.

New Jersey.

It is quite evident that water or vapor of water, is going up the stack and condensing therein as soon as it reaches the iron walls of the stack against which the outer cold air is blowing. If there was no moisture there could be no condensation. Where does the moisture come from? You say it did not come from the ground or from the atmosphere; I agree it is not in the atmosphere in sufficient quantities to be material. Therefore, it appears to me that there are but three places from which it could come. First, the ground or a very wet ash pit; second, the coal, if this is kept deluged with water; and, third, from a leaky boiler. In view of your neighbors having no trouble I am inclined to lean to the leaky boiler idea, until it is demonstrated that the boiler does not leak. If the apparatus was shut down this could readily be proved. I assume, however, the apparatus has been running since it was first started this fall, and that the only way, while running, to form an opinion is to note how much fresh water is run in an hour. Now if you have any long underground masonry flues, running between the boiler and the chimney, water might get into them the same as the ash pit. Make sure. The symptoms, from the information at hand, would point to a leaky use any particular grate? H. B. D. Z.

In your issue of January 4 last you kindly gave me some information on heating with oil steam boilers, but you do not say anything as to economical use of a large boiler. Will the consumption of fuel be much greater than with a boiler made for greenhouse heating; also would the large boiler have a larger capacity in houses of the size mentioned than these? Would it be advisable to use any particular grate? H. B. D. Z. British Columbia.

The boiler that you referred to in your first letter, and to which I replied in the issue of The Florists' Exchange of January 4, as the larger of the two, I was compelled to approximate quite a little. The size of the firebox leads me to believe that it was originally made to burn wood for fuel. I think it would be best for you to send me further particulars regarding this boiler. From your description I assume that it is a horizontal firebox tubular one. I want to know the length of the tubes as well as the diameter, and also the diameter of outside of boiler. If my surmise is correct that the firebox was designed for wood as fuel, I can then the better tell you the correct power of the boiler, and also let you know how large a grate you will need for your purpose for coal.

A boiler larger than is absolutely necessary to perform a given amount of work is always economical. This latter statement I mean to be taken in reason, however. A boiler made to meet the special requirements for greenhouse purposes as, in the opinion of the writer, much better than any old boiler picked up at random. This applies to greenhouse boilers made of cast iron, or the wrought steel type. There are many of either type and style at present on the market, and each has its merits. Look over the various advertisements in The Florists' Exchange.

One of the many special grates on the market, of the shaking and dumping type, will nicely go into the boiler, and your nearest local boiler maker will be the best person to see for that. I will give you the size, and as he is on the ground it will be best to have him look it over. When I learn the exact capacity of the

boiler, I will be able to reply to your question about greater capacity than the houses you mention.

In your first letter you said something about violets, carnations, cucumbers, etc. Bear in mind that each of these requires different temperatures, that you cannot grow good violets at 55 degrees, and that cucumbers need more heat than any of those other plants you mention. U. G. SCOLLAY.

Pittsburg.

News Notes.

For the last week or so we have had a touch of genuine Winter weather, the thermometer hugging the zero point and high winds prevailing, so that it was hard work to keep the proper temperature in glass houses. Business suffered somewhat on account of the cold, but there seems to be plenty of stock. Prices remain about the same on carnations and roses. Bulbous stock is plentiful and cheap; tulips are coming in of good quality. A lot of lilac is being cut and selling fairly well. Plant trade is very dull at wholesale as well as retail; the hard times have some effect.

Charles Erhart of the North Side Market made a trip to Fort Wayne, Ind., and visited W. J. & M. S. Vesey's greenhouses, where he found things in fine condition.

E. C. Ludwig writes from Los Angeles, Cal., where he is at present with his family, and is having the time of his life; he certainly escaped the tough weather in good time.

A bulletin of the Agricultural Experiment Station of Nebraska, just issued, should be of great interest to carnation growers; it treats on bud-rot of carnations and a mite accompanying the bud-rot of carnations, with illustrations and explanations of same.

The first competitive flower show of the Florists' Club takes place this week and carnations are to be exhibited, for which prizes will be awarded to commercial men and private growers; the latter prizes are offered by A. T. Boddington, New York. E. C. REINEMAN.

ROCHESTER, N. Y.—At present writing we are in the midst of terrific blizzards, much snow and zero weather. However, we are glad it has checked the gripe ravages, and hope that it will augment business in many ways. Several large lanterns have occurred here, using considerable material for decorations. Roses and carnations are being disposed of with no advance on last quotations; and sweet peas, tulips, daffodils, Paper White narcissus, etc., are to be had at normal prices.

Indications bid fair to strengthen the belief that an association of growers and retail men is under way, and while nothing is definite, hopes are entertained of its ultimate formation.

H. E. Wilson has leased the greenhouses on the A. Townsend homestead, East avenue, and expects soon to have them occupied, steam having already been started.

Since the death of Mr. Lacy, the South avenue floral store has been permanently closed. COCKNEY.

Detroit.

News and Trade Notes.

January business averaged better this year than last. Prices keep at the same level with an increased supply in every line except violets, which are short. The outlook is considerably brighter with bookings for large decorations ahead. Wm. Brown has a large job decorating for the junior hop at the University of Michigan in Ann Arbor.

Hugo Schroeter and J. E. Sullivan are both about, although weak from the gripe, which handled both of them rather roughly.

A large procession of unemployed called on the local mayor without success. Our genial big-hearted Park Commissioner, Phil. Breitmeyer, saw an opportunity and will employ several hundred of them for two months digging canals at Belle Isle.

Local lettuce growers are having a very hard time. It seems the price cannot be forced up to a living figure; lettuce selling at 6c to 8c a pound. Of late years the local growers have obtained almost phenomenal prices and the old evil, one is tempted to say, of increasing the product has been indolized in. FRANK PANZER.

KANSAS CITY, MO.—Sam Murray has been elected official florist of the Kansas City Passenger Agents' Club.

St. Louis.

News Notes.

Robert Thompson, the local greenhouse builder, reports that he has quite a few contracts on hand for new houses, on which work he will begin this Spring.

Charles Flunker, an old and respected florist, died the past week after a long spell of sickness, at the age of 73 years. Mr. Flunker had quite a place at 3727 Tennessee avenue and his last request was that his friends, Frank Fillmore, Emil Schray, John M. Walther and Conrad Bergestermann, be his pall-bearers, and his request was granted. The funeral took place Thursday, January 30, from his late residence. Mr. Flunker had many friends in the trade who extend to the widow and children their deepest sympathy.

The Union Station Flower Basket was at the Odeon Charity entertainment last week. Those who attended were supposed to drop cut flowers in the basket at the door; these are taken to the different hospitals the next day. The large basket was completely filled the first night.

The members of the St. Louis Florists' Club should not forget that on next Thursday afternoon the club holds its annual carnation exhibition in the Burlington Building. Secretary Bentzen says that he is promised a fine lot of new varieties from carnation growers all over the country. These, with the displays by our local growers, should make this the largest exhibition ever held by the club. A large attendance is looked for, as all in the trade are invited to attend, regardless of membership. The trustees will stage the flowers of outside exhibitors.

Baltimore.

Trade Notes.

Large quantities of good carnations are now upon the market; the prices obtained are somewhat below those of last year at this time. Roses are not plentiful; none of our commercial growers are handling American Beauty.

The Gardeners' Club has appointed a Spring show committee, consisting of C. L. Seybold, E. A. Seidewitz, F. H. Moss, George Morrison and N. P. Flitton. This committee will meet this week and arrange matters, and report at the next meeting.

A number of visitors from the American Carnation Society's convention at Washington visited Baltimore growers on their return home. F. W. Kelsey, New York, and F. Leutschlager, Chicago, were also in town.

The beautiful grounds and buildings of the old Maryland school for boys have been purchased by Major R. M. Venable, president of the Park Board, and added to the Gwynn's Falls Park in the Carroll Park district. C. L. S.

SPRINGFIELD, ILL. Local members of the Illinois State Florists' Association are planning for the entertainment of fellow flower growers during the annual convention in this city February 18-19. It is the intention to have the coming gathering the best in the history of the association. Albert T. Hey of this city is president of the State association, having been elected last year at Bloomington. The other of-

BOSTON
PHILADELPHIA

GREENHOUSE MATERIAL

Should be bought at once if you expect to do any building this Spring. Glass is now very low and it's the chance of a lifetime to put up a greenhouse. You can get more for your money right now than you can next month. Don't wait. Don't hesitate or put it off; write to-day for your estimate and then get busy and order the material. This advertisement means nothing to the man who doesn't act; you must do something right away if you want to make money.

Our new catalog will be sent anywhere on request. Ask for one.

WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

And then there is the cost to be considered. Why not let us take up this important question now?

We make a specialty of Greenhouse stock for Commercial Growers of Flowers and Vegetables. Sash bars 32 feet long and over $\times \times \times$. Write for circulars and prices $\times \times \times$

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 7

NEW YORK AND CHICAGO, FEBRUARY 15, 1908

One Dollar Per Year

Winsor and White Enchantress

Strong Rooted Cuttings
Now Ready for Delivery

WINSOR has proved to be the finest carnation in the light pink class. We sold a large quantity of it last year, but there will be a much larger sale for it this year. At the English Carnation Show held in December, it was the winner in the light pink class. It is doing well everywhere, and will supplant everything in that color.

WHITE ENCHANTRESS will occupy the same position among white carnations that Enchantress does among flesh pinks. It has all the good qualities of the common Enchantress,—long stem, earliness, large size, freedom, etc. In our opinion it is by far the best white carnation ever introduced.

We have a splendid stock of both Winsor and White Enchantress ready for immediate delivery, and will guarantee perfect satisfaction with the cuttings supplied. Do not wait, because the demand for these varieties is bound to be enormous. Order early, while we can promise immediate delivery, and secure gilt-edged stock. We have a large stock of both of these varieties, and all our cuttings are heel cuttings, taken from flowering stems. On account of the quantity that we are growing, we are not obliged to over-propagate, and our stock is in the most perfect and healthy condition.

Strong rooted cuttings from sand, \$6.00 per 100, \$50.00 per 1,000. Extra strong transplanted cuttings from soil, \$7.50 per 100, \$60.00 per 1,000.

Strong established pot-grown plants, \$9.00 per 100, \$75.00 per 1,000

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
 George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

Editor Florists' Exchange:
 We are glad to inform you that the unfortunate differences which have arisen between our houses have been amicably adjusted and, we hope, for the good of the seed trade.
HENRY A. BREER,
W. A. LILL, BREER & Co.,
 Philadelphia, Pa., February 8, 1908

DETROIT, MICH. The Lohman Seed Company will erect a new store at Grand avenue and Randolph street, to cost \$1,000. Building operations will commence at once.

DALLAS, TEX. The Holloway Seed and Floral Company has amended its charter, changing its name to the Robinson Seed and Plant Company and increasing its capital stock from \$25,000 to \$70,000.

MICHIGAN BEANS. At a recent meeting of the Michigan Bean Growers' Association in Detroit, statistics presented showed that last season's crop was about 65 per cent. of the preceding season with about four million bushels still available for consumption. The estimated average in the State last year was over 375,000.

Seed Trade Notes.

The real Winter weather of the past two weeks, in fact, ever since February came in, has considerably curtailed the retail trade, especially counter business; mail orders, of course, keep coming every mail, but with quite a little less volume than during the last days of January. As regards wholesale orders, they also have slackened somewhat, with the heavy falls of snow and continued severely cold days, but as most of the large houses have plenty of advance orders still unfilled, there has been no lack of work this past week.

As regards the short seed items it would seem to be turning out that quite a little sweet corn, onion, and certain varieties of peas were being as usual discovered at "the price." We must have all realized for some years that this country of ours has many sections, and for a consideration there can almost always be found enough to go around. The seeming high prices for seeds this season are not by any means an unmixed evil; but to profit substantially by the advance we must see to it that we do not fall back into the old rut of prices that leave no proper margins of profit for either the seed grower or the seedsmen. Retail prices are too low.

Several times in my notes during the past few months, I have called attention to the fact that the very high values for grass and clover seeds would just as soon as the advance orders for the Spring of 1908 began to be placed make much trouble. Every day is now seeing arguments between buyer and seller over this question; for when the only must be sold to the planter for over \$3 per bushel, red clover for more than 20 cents a pound, and Red Top grass seed for 15 cents or so a pound there begins to be trouble. We will have plenty of fault finding over the grass seed question this year, surely.

Many seedsmen who did not contract a year ago for their supplies of seed potatoes are finding it not by any means an easy matter to supply their needs; that is, at anything like the average rates. This is not strange, as the potato crop as a whole has averaged very nearly twice the prices per bushel that it did a year ago.

JAMES VICK'S SONS
ROCHESTER, N. Y.
 The Leading Specialists and Largest Growers of High-Grade Asters in the World.

Two New Varieties for 1908

VICK'S IMPERIAL SUNRISE
 A novelty of extraordinary merit. Seedling from Vick's Daybreak, but distinct in form of flower, each petal being perfectly quilled. Color delicate pink. Plant a robust grower, upright branches, each crowned with magnificent double flowers, three to five inches in diameter. Type securely fixed. Sure to be a winner. Packet 25c; two packets or more 20c. each.

VICK'S EARLY BRANCHING
 Developed from Vick's Late Branching. Flowers of this new variety can be placed on the market ten days ahead of Late Branching sorts. Plants have few branches which are free from side buds, the whole strength of the plant being given to the development of large perfectly double flowers. Long stems. Two colors, White and Rose. Packet 25c; two packets or more 20c. each.

For prices in quantity see our "Aster Book for Florists."

JAPANESE BULBS. According to reports received from Japan, there is to be a decided advance in the price of bulbs this year. It seems that the later dug bulbs of *Lilium longiflorum* and *L. multiflorum* are usually held in hand by the growers until quite late in the season, when belated orders come in and they can be unloaded at quite satisfactory figures. The late dug stock in 1907, for some reason or other, has not realized anywhere near the usual prices; in fact, orders did not materialize to any extent, with the result that the stock has had to be marketed through the auction rooms in London, England, and has fetched very low figures. In addition to this, the crops last year suffered materially from floods, and, as would seem a natural consequence, the growers are not planting so many bulbs this year. The variety *L. giganteum* has done better than those above mentioned, both in the fields and in the markets. The bulbs have, however, jumped from 10 to 25 yen per bushel, and next season's crop of forcing bulbs will be advanced accordingly. *Lilium auratum*, in large sizes, will be very short, and *Lilium album* is the scarcest of any; in fact, the growers will not sell *L. album* unless other varieties are ordered at the same time. The probable advance on Japanese lilies will be from 15 to 20 per cent. over 1907 prices.

European Notes.

At last we have a clear board and are able to take a survey of the remnants that are left. It must be admitted that they are a sorry lot, and filling up orders stand a very poor chance of being completed.

The seed of our latest of all crops, New Zealand spinach, has at last dried up and is ready for shipment. The money spent in drying and curing is more than the seed itself will realize. The culture of this article for market is on the increase in Europe; the English gardeners (the most conservative in the world) are beginning to realize its value.

While the trade in sweet peas in general is booming it is evident that the very dark blue and purple varieties, such as David R. Williamson and Horace Wright, are losing popularity. As the crop of these was fairly good, this is somewhat of a disappointment to the growers. Any good pink sells like hot cakes.

In the ragged remnants referred to above spinach is almost entirely lacking; the sales of all varieties having been very heavy. As was to be anticipated, the knowledge of this and the continued high prices of grain, have stiffened the backs of the growers and higher prices have been exacted all round.

The ruinous competition from Holland is bound to wear itself out, and the increased cultivation of sugar beet makes it difficult to place crops like spinach and peas on the best seed growing land. As, however, some of the dwarf peas most desired by the Dutch growers are a drug just now, we are not likely to suffer much inconvenience.

The Lecerton business not having found a purchaser the stock will be offered for sale in a few days. Some of the employees have started business in another part of London and hope to retain some of the trade.

The grippe is playing havoc among us just now; George H. Dicks is one of the latest victims. EUROPEAN SEEDS.

"Sweet Peas and Their Cultivation, for Home and Exhibition."

This very handy volume is written in the genial and lucid style of the deservedly popular secretary of the National Sweet Pea Society of England.

It is written entirely in the interests of the amateur and especially for those who have the intention of competing for some of the valuable prizes offered at the London and Dublin exhibitions. It is well printed on good paper, is freely illustrated with beautiful half-tone re-

productions of some of the best of recent novelties and although a considerable amount of advertising matter has been bound up with it it can be carried in the coat pocket with ease.

In its 90 pages will be found articles on The Cult of Sweet Peas, History and Development, The Cupid and Bush Sweet Peas, The Best Sweet Peas, a most valuable chapter full of information, Soil Preparation, Seeds and Seed Sowing, Staking and Tying, Watering and Manuring, Points for Exhibitors, Diseases, etc.

As it is the only work of the kind in existence it will no doubt find a ready sale. While the cultural directions are especially adapted for the British Isles and Northern Europe they are equally applicable to any temperate climate.

The book can be obtained from the "Amateur Gardening" office, Aldersgate street, London E. C., price 25 cents, or bound in cloth 35 cents plus 4 cents postage in each case. S. B. D.

NOTES FROM HOLLAND.—We are passing through a very severe Winter in Holland. The intense cold has interrupted work in the fields and on the bulb farms. A movement has been set on foot to open classes for those interested in plant growing, with the aid of a contribution from the government. These classes assemble four times a week during the evenings only. They are very well attended and prove to be a success in every way. The classes are held in the centers of the bulb-farming districts at Lisse, Hillegom, Voorhout and Noordwyk. Admission is either entirely free or at a nominal cost. The teaching is done by experts, and the subjects on the program are: Practical Growing, comprising examination of the soil; preparing the soil in some special cases to prevent disease or to fight against it; How to Recognize Disease; Manuring; Knowledge of Varieties and How to Choose them for different purposes; Hybridization, etc. Instruction is also given in the chemical department and on the life of plants, such as their growth, feeding, breathing, seedling, etc. The classes are attended mostly by the younger members of the profession, although the older members are considering the advisability of forming special classes for themselves. Heretofore, similar schools have been in operation at Boskoop, Aalsmeer and other centers in Holland where nursery stock is grown, but this is the first instance of classes being established in the bulb districts and much good is likely to result therefrom.

We learn from several countries of Europe that some difficulty is being experienced in bringing hyacinths into flower. This must be attributed somewhat to the cold Summer of 1907. As regards the coming stock for the Summer trade, we are basing our calculations on having the same quantity as last year, provided nothing interferes with present indications. J. B.

CATALOGUES RECEIVED.

WILBUR A. CHRISTY, Kinsman, O. Wholesale Price List of Mapleshade Gladioli. Illustrated.

YUENS GARDENS COMPANY, Newburgh, N. Y. Illustrated Catalogue of Vegetable and Flower Seeds, Bedding Plants, etc.

CHARLES F. SAULS, Syracuse, N. Y. Wholesale Price List for the Trade only of Garden, Field and Flower Seeds, Poultry Supplies, Tools and Implements.

T. J. DWYER & COMPANY, Cornwall, N. Y. Catalogue of Hardy Fruit and Ornamental Trees, Shrubs, Vines and Roses. Illustrated. This firm was established in 1884.

OTTO KATZENSTEIN, Atlanta, Ga. Descriptive Price List of Cereals canadensis alba, Kudzu Vine, Fern-leaved Staghorn Sumac, and American Purple Fringe or Smoke Tree. Illustrated.

RALPH M. WARD & COMPANY, New York. Catalogue of Lily Bulbs. Handsomely illustrated, showing views of Lily Growing in Japan, Plants of the New Lilium Wardenal and other attractive features.

Gold Medal Seedling Canna "LONG BRANCH"

A cross between Queen Charlotte and Italia, tough, leathery, green foliage. The flowers resemble a giant flowering Queen Charlotte in the Orchid-flowering class, being bright crimson with wide, irregular border of yellow. Exhibited at Jamestown, where we were awarded a Diploma and Gold Medal. Price 30c. each, \$3.00 per doz., \$25.00 per 100.

New Seedling Canna "NEIL CAMPBELL"

Of special worth on account of its color, which is a deep orange yellow. Good size flower and very free and early. Foliage is dark purple and with the orange flowers make a fine show. Price 30c. each, \$3.00 per doz., \$25.00 per 100.

DREER DAHLIAS

We can still furnish in strong undivided field-grown roots the following varieties of Dahlias. All of these are first-class sorts of their respective types and colors and strictly true to name.

Varieties specially suited for cut flower purposes are marked with an asterisk (*)

CACTUS DAHLIAS

* Allbon. A large, long straight petalled pure white flower with creamy centre of improved form.....	Doz. 1.00	\$1.50
* Aegle. Rich, warm cardinal-red, with peculiarly twisted petals.....	1.00	8.00
* Amus Perry. Flowers very large, with long, tubular petals. Color very red, one of the earliest and freest flowering.....	2.50	15.00
* Attila. Tender mauve pink on the edges passing to a creamy white centre; a beautiful Dahlia of large size and excellent form.....	2.50	15.00
* Alt Heidelberg. Fine orange-scarlet.....	.85	6.00
Arachne (The Spider Dahlia). White edged crimson with peculiarly twisted petals, very variable.....	.85	6.00
* Bessie Mitchell. A fine flower on stiff stems, apricot orange shading to a reddish centre.....	1.25	10.00
* Coronation. Glowing red; a medium sized flower of fine form; splendid for cutting.....	2.50	15.00
Comet. Delicate lilac, pencilled, spotted and striped with tyrian rose.....	1.25	10.00
* Carmen Sylvia. Soft, rosy-carmine, shading lighter to the centre.....	1.25	10.00
Charm. Centre petals white-edged with pale yellow, the outer petals gradually changing to a light blush edged with salmon.....	1.25	10.00
* Clara G. Stredwick. A splendidly flower of very large size, color slimp pink shading to salmon-red in centre.....	1.25	10.00
* Capitan. Soft orange-scarlet, shaded apricot, remarkably free flowering.....	1.00	8.00
* Cornucopia. Vermilion with carmine shadings, long, narrow petals.....	1.00	8.00
Dainty. Ground color lemon-yellow, shading to a soft, glowing gold rose with tip of yellow; truly dainty.....	1.25	10.00
* Else. A charming variety, with a combination of delicate colors. The base of the petals is of buttercup-yellow, gradually passing to amber, finished with a tip of tyrian rose.....	2.50	15.00
Earl of Pembroke. Bright plum color or a royal shade.....	1.00	8.00
Exquisite. Fine pure orange-scarlet with salmon shadings.....	1.00	8.00
* Firebrand. Rich, glowing vermilion, shading deeper.....	1.00	8.00
F. A. Wellesly. Brilliant blood-red suffused with carmine.....	1.25	10.00
* Floradora. A remarkably free-flowering, bright blood red.....	1.25	10.00
* Florence M. Stredwick. Pure white, of large size and perfect form.....	1.25	10.00
* Frute. Pencils and cream describes the color of this beauty; a pleasing soft rose-pink passing to a cream centre.....	1.25	10.00
Freiwilligkeit. Rich glowing scarlet.....	.85	6.00
* Frau Hermine Marx. Beautiful La France pink, a fine cut flower.....	2.50	15.00
* Flora. An ideal white Cactus Dahlia. A large, heavy flower, produced on stout, stiff stems, makes it valuable for cutting.....	2.50	15.00
* Gabriel. Creamy white, edged with vermilion; an improvement on the "Spider Dahlia".....	1.25	10.00
Gen. French. A good-sized flower of good form, of a pleasing terra-cotta color.....	1.25	10.00
Gallard. Rich, glowing scarlet, with long, tubular petals.....	1.00	8.00
Gellert. Full, double, of fine form, scarlet, shading to ruby at base of petals.....	1.00	8.00
* Gen. Buller. Cardinal red, each petal tipped with white.....	1.00	8.00
* Gottelinde. Primrose-yellow, of fine form.....	1.00	8.00
Graf Waldersee. Delicate rose suffused with pink.....	.85	6.00
Hans Sachs. Bright cherry red.....	.85	6.00
* Harbour Light. Brilliant cochineal-red, with a stripe of reddish-apricot through the centre of each petal. The coloring is variable, sometimes the light, at others the dark color, predominating, but beautiful in either form.....	2.50	15.00
* H. W. Sillem. A brilliant, rich, cardinal-red, with deeper shading, flowers of perfect form, and frequently measuring 7 inches in diameter.....	2.50	15.00
Hohenzollern. Rich bronzy orange-red, with gold shading.....	1.00	8.00
Horn of Plenty. Deep carmine-purple; flowers large, long, narrow, twisted petals cleft on ends.....	1.00	8.00
Imperator. Large-sized flower of deep currant-red, with deeper shadings.....	2.50	15.00
Island Queen. Soft lavender pink.....	.85	6.00
J. Bryant. Deep yellow at base, passing to pale yellow with reddish streaks.....	.85	6.00
* J. W. Wilkinson. Rich ruby of fine form.....	.85	6.00
* J. H. Jackson. Brilliant crimson-maroon, very free.....	1.25	10.00
Kingfisher. Carmine-purple, long, narrow petals and finely formed.....	1.25	10.00
* Kriemhilde. The most popular cut flower variety grown to-day; perfect flowers on long stems; color a brilliant pink, gradually shading to white at the centre.....	1.00	8.00
Landrath Dr. Schiff. A most pleasing shade of apricot suffused with rose.....	1.00	8.00
* Lauretta. Base of petals deep amber-yellow, passing to apricot and old-rose on the edges; an attractive combination.....	2.50	15.00
* Leuan. Ground color coral-red, suffused with apricot, shading to salmon-rose on the edges as the flower matures.....	2.50	15.00
Lady Edmund Talbot. Coral red with rosy shadings.....	.85	6.00
Lodestone. Orange-scarlet, large and free.....	.85	6.00
Minnie West. Canary-yellow in centre, gradually shading to white at tips; a good, large flower.....	2.50	15.00
Magnificent. A pretty Dahlia, ground color capucine-lake, passing to salmon-rose at the tips.....	1.25	10.00
Mrs. H. L. Brosson. Large, perfect flowers of a delicate tint of salmon on a yellow ground.....	1.25	10.00
Mabel Talloch. Soft violet-rose with yellow shadings at the base of the petals.....	1.25	10.00
* Mary Service. Apricot, shaded orange, shading to purplish-rose at the tips; a well-formed flower, and a free and continuous bloomer.....	1.00	8.00

Mrs. H. J. Jones. Very large, perfect, rich, bright scarlet with cream edged, occasionally comes self colored.....	Doz. 1.00	\$1.00
Mrs. Carter Page. Glowing deep carmine.....	.85	6.00
Mr. Moore. Fine deep claret.....	.85	6.00
Mrs. Jovett. Brilliant reddish salmon.....	.85	6.00
Oda. Rich crimson carmine of fine form.....	1.00	8.00
Peace. Free-flowering, pure white.....	.85	6.00
Rosine. Glowing crimson with purple shading.....	.85	6.00
Reliable. A very large, bold, striking flower, of a pleasing madder-carmine, suffused with salmon and yellow.....	2.50	15.00
Ringdove. Salmon-carmine centre with yellow shadings, passing to white on the edges, very variable, but always pretty.....	1.00	8.00
Ruby. Deep vermilion centre, shading to ruby-red at the edge of the petals; a rich pleasing color.....	1.00	8.00
* Ruckert. A superb flower of perfect form, a brilliant blood-red with darker shadings.....	1.00	8.00
* Rakete. Rich glowing, fiery-red, of good form.....	1.25	10.00
* Standard Bearer. Rich, fiery-scarlet, very free, and of perfect form.....	1.25	10.00
* Stern. A beautiful pure lemon yellow, very free and one of the best yellows for cutting.....	2.50	15.00
* Shooting Star. (Stern-schuppe) Good-sized flowers, of regular form, produced on stout stems held well above the foliage. Color pure golden yellow; entirely distinct.....	2.50	15.00
* Thuringia. Flowers very large, and always of good form, of a brilliant fiery-red color. A remarkably free bloomer.....	2.50	15.00
Uberflus. Brilliant geranium red.....	1.00	8.00

Vesuvius. Butterscup yellow, striped and spotted with oriental red.....	1.25	10.00
* Victor von Scheffel. An ideal cut flower, of a soft pink, passing to white in the centre; very pleasing.....	1.25	10.00
* Volker. A charming free-flowering pure yellow.....	1.25	10.00
* Uncle Tom. Maroon with darker shadings, almost black.....	1.00	8.00
* Winsome. A fine white of good size and perfect form.....	1.00	8.00
Zephyr. Crimson-carmine, intensified by bronzy shadings at the base of the petals; a fine large flower.....	1.00	8.00

DECORATIVE DAHLIAS

* Admiral Dewey. A rich French purple; very Doz. free.....	1.00	\$8.00
* Black Beauty. Deep velvety maroon, almost black.....	1.00	8.00
* Bronze Beauty. Bright coppery orange.....	1.00	8.00
* Catherine Duer. Bridescent granum-red, a favorite at Newport, R. I., where it is used more extensively than any other variety for cutting.....	1.00	8.00
* Clifford W. Bruton. A fine bright yellow.....	1.00	8.00
* Fire-rain. Cardinal red. A fine cut flower.....	1.00	8.00
Gigantea. A large creamy white.....	1.00	8.00
* Henry Patrick. A fine pure white.....	1.00	8.00
* Lyndhurst. Rich brilliant cardinal-red; a fine cut flower.....	1.00	8.00
Marchioness of Bute. White tipped with rosy carmine.....	1.00	8.00
* Mrs. Roosevelt. Delicate silvery rose.....	2.00	15.00
Oban. Rosy lavender, suffused and overlaid silvery fawn.....	1.00	8.00
* Souvenir de Gustave Dozon. The most sensational Dahlia of the season; a decorative variety of mammoth proportions, which, under ordinary cultivation, will produce flowers 6 inches across, and can be grown to measure full 9 inches. It is of free growth, remarkably profuse-flowering, and pure scarlet in color.....	3.50	25.00
* Sylvia. Soft, pleasing mauve pink, gradually changing to white in the centre, a fine cut flower.....	1.00	8.00
* Wm. Agnew. Rich dazzling carmine red; a grand flower.....	1.00	8.00
* Zulu. Deep maroon with black shadings.....	1.00	8.00

SHOW AND FANCY DAHLIAS

* A. D. Livoni. Beautiful clear pink, of perfect form and very free.....	1.00	8.00
* Arabella. Light sulphur yellow, shaded peach-blossom on edges; a fine flower.....	1.25	10.00

* Bon Ton. A very fine, formed flower of Doz. 1.00	\$1.00	
Chameleon. Flamingo red centre, shading to crushed strawberry, with yellowish blending of a variable flower.....	1.25	10.00
Duchess of Cambridge. Base of petals white suffused pink, nearly tipped dark crimson.....	1.25	10.00
Emily. Solfarino, with white markings, very large.....	1.25	10.00
Elegans. Tyrian rose, tipped white.....	1.25	10.00
Fern-Leafed Beauty. White, each petal edged with dark carmine red.....	1.25	10.00
* Frank Smith. Intense purplish crimson shading almost to black, each petal tipped with white. The most perfect fancy Dahlia.....	1.25	10.00
* Fanny Furlow. A fine deep yellow.....	1.25	10.00
* Grand Duke Alexis. Large, massive flowers, ivory white with a faint tinge of rose at the extremities of the petals.....	1.00	8.00
* John Thorpe. Solfarino rose, of perfect form.....	1.25	10.00
Keystone. Light rose, spotted and striped crimson.....	1.25	10.00
* Miss Browning. Primrose yellow tipped with white.....	1.25	10.00
* Miss May Loomis. White, suffused with soft rose.....	1.25	10.00
Mrs. Stancombe. Straw yellow, suffused amber, striped red and mottled, and tipped blush.....	1.25	10.00
Olympia. Bright rose pink, striped, spotted and pencilled crimson.....	1.25	10.00
* Queen Victoria. Handsome bright yellow, beautifully quilled.....	1.00	8.00
* Queen of Yellows. Beautiful primrose yellow.....	1.25	10.00
* Red Hussar. Pure cardinal red; perfect form.....	1.25	10.00
Ruth. Pure white with faint tint of blush on edges.....	1.00	8.00
Striped Banner. Cardinal red, striped white.....	1.25	10.00
Thos. Westcott. Flery red, tipped white, very profuse.....	1.25	10.00

NEW PAEONY-FLOWERED DAHLIAS

This new type of Dahlias originated in Holland, and promises to become very popular. The artistic flowers are very large, from 6 to 8 inches across, and are best compared to the semi-double Paeonies in general form. They all flower very freely, and are borne on long, strong stems, making excellent material for cutting, as well as for garden decoration.

- ***Germania.** Brilliant strawberry red, a very fluffy, artistic flower, standing well above the foliage, producing a very gay effect. 25 cts each; \$2.50 per doz.
- ***Gloria of Baarn.** Very large, loosely arranged flower of soft hortensia-rose color. 35 cts each; \$3.50 per doz.
- ***Queen Emma.** A magnificent sort that appears almost artificial. It is of a charming shade of mallow or Hollyhock pink, the inner petals bordered with gold. 25 cts each; \$2.50 per doz.
- ***Queen Wilhelmina.** Immense, fluffy flower of pure white with yellow centre. 35 cts each; \$3.50 per doz.

TWELVE CHOICE DOUBLE POMPON DAHLIAS

- Ailots Imperial.** Creamy white, tipped analine red.
- Darkness.** Deep velvety maroon.
- Elegant.** Soft pink, tipped deep pink, reflex light pink.
- ***Gold Hanchen.** Pure primrose yellow.
- Kleine Domitica.** Orange buff; always in flower.
- Little Bessie.** Creamy white, quilled petals.
- Little Herman.** Deep carmine, shaded garnet, tipped white.
- Little Nain.** White, tipped amaranth red.
- Little Prince.** Deep currant red, tipped white.
- Lou Kramer.** Amber, heavily tipped crimson.
- Red Piper.** Beautiful deep red of fine form.
- ***Snowball.** Unquestionably the finest white. 10 cts each; \$1.00 per dozen; \$8.00 per 100. The set of 12 varieties for \$1.00.

NEW CENTURY SINGLE DAHLIAS

These magnificent single varieties all originated from the celebrated Twentieth Century offered in this set. They are all of free branching habit, flowering early, profusely and continuously throughout the season, flowers from 4 1/2 to 6 inches across on stems 3 feet long, and when cut keep in good condition for many days.

- ***Crimson Century.** Rich, deep, velvety crimson, shaded maroon, with rose halo around a yellow disc. 15 cts each; \$1.25 per doz.; \$10.00 per 100.
- ***Maroon Century.** Rich, velvety maroon with yellow disc. 25 cts each; \$2.50 per doz.; \$20.00 per 100.
- ***Pink Century.** Delicate soft pink, flower very large 20 cts each; \$2.00 per doz.; \$15.00 per 100.
- ***Scarlet Century.** Brilliant scarlet with golden disc. 25 cts each; \$2.50 per doz.; \$20.00 per 100.
- ***Lavender Century.** Delicate lilac with light shadings, very pretty. 15 cts each; \$1.25 per doz.; \$10.00 per 100.
- ***Twentieth Century.** Early in the season, intense rosy crimson, shading gradually to almost white on the edges and a light halo around the disc. As the season advances the flowers become lighter, changing to almost pure white, suffused with soft pink, not variegated but blended in the most beautiful manner 15 cts each; \$1.25 per doz.; \$10.00 per 100. One each of the 6 varieties for \$1.50.

STANDARD SINGLE DAHLIAS

- ***Alba Superba.** Fine large white, with a dash of canary yellow at base of petals. 15 cents each, \$1.25 per doz; \$10.00 per 100.
- ***Advancement.** Fine deep ruby-red with rose halo and yellow centre.
- ***Ami Barriol.** Rich pure garnet, with fine dark foliage.
- ***Blackbird.** Black velvety maroon, with a bright red spot at the base of each petal.
- ***Cashmere.** Crimson maroon with darker shadings.
- Gallardia.** Golden yellow with a broad red band around a golden disc. 15 cts ea; \$1.25 per doz.; \$10.00 per 100.
- ***Gracie.** White, delicately suffused with blush and a primrose halo around the disc.
- ***Mrs. Bowman.** Solfarino, a large showy flower.
- Polly Eccles.** Pure apricot with yellow shadings, a halo of poppy red surrounding the Indian yellow disc.
- ***St. George.** A pretty primrose yellow of large size. 15 cts each; \$1.25 per doz.; \$10.00 per 100.
- Striking.** Deep garnet, each petal with a white spot on the tip.
- ***Wildfire.** Brilliant poppy-scarlet, of large size. Price: Each dozen noted, 19 cts each; \$1.00 per doz. One each of the 12 varieties for \$1.25. We will furnish one each of the 151 varieties here listed, an interesting collection, for \$15.00.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Late Flowering Lilacs.

There is a class of lilacs in nurseries going under the common name of Hungarian lilacs, of which the representatives are *Syringa Josikae* and *S. villosa*, with one or more varieties of the latter, differing but little from it. These are later flowering than common lilacs of the *S. vulgaris* type, and should be in all collections where a continuation of bloom of these desirable shrubs is desired. They commence to flower just as the blooms of the older sorts are over. Although not of as strong an odor as the others, they possess enough that one recognizes he is scenting a lilac.

The bushes of this tribe make a more erect and less twiggy growth than the others, and their foliage is of a shining green.

The flowers of *S. Josikae* are of a dark lilac color; those of *S. villosa* are white, but not such a cream white as those of the old common white one.

These lilacs should certainly be added to collections not already possessing them, for the oddity of seeing lilacs in bloom after every one supposes them over strikes all who see them.

While on this subject let me mention a very early flowering lilac. It is the *Syringa oblata*, a rather new species from China. It is really earlier than any other sort by several days; and all will need it because of this. It is of the old order of lilacs in appearance of leaf and flower; the panicles are but of medium size. On account of its earliness it would be a good one to raise seedlings from with a view to getting improved kinds, having larger panicles while retaining the early flowering character of the type.

All the lilacs mentioned in these notes are easily raised by budding them on common seedling lilacs or on stocks of privets.

Forming Standard Shrubs.

Shrubs in standard form are now so much sought that quite a number of kinds are already to be had grown in this way; the mock orange, some spiraeas, snowballs, privet, hydrangea and lilacs are particularly prominent. There are always positions suitable to all kinds and shapes of shrubs and trees, and shrubs as standards are quite popular just now. Usually it is for a place near a dwelling or a walk, for when on a lawn, unless near a flower garden or some similar work, the standard does not seem as well fitted as specimens of natural growth.

This is the time to be preparing for the formation of standards. If strong shrubs admitting of the cutting away of all shoots but a leading central one can be had, the standard is almost made at once. The leading central shoot is the only one to be left. This, if branched up its side, must have all its side shoots cut away up to the height the standard is wanted to branch, say four feet. Then leave the shoots above it, pruning them back a little and topping the central stem so that it won't get any higher, and a standard is there. But another way and in some respects a better one, for it gives a cleaner looking stem, is to take in hand a strong young bush and cut it down to the ground, leaving but an inch or two at the base. A strong shoot, perhaps several of them, will start out in Spring, when should there be more than one, cut all away but the strongest. Let it grow to the required height, say four feet, then top it. If side shoots are made let them grow the first season, cutting away in the Winter following all that are below the desired height for the head. Try any bush at all that would appear pleasing as a standard.

Where *Cerasus (Prunus) Caroliniana* Will Live Outdoors.

A correspondent living at Pearson, Md., asks us if we think the *Cerasus (Prunus) caroliniana* would live out with him. He says the pomegranate, fig and grape myrtles are rarely or never hurt there in Winter, and he thinks, therefore, the beautiful Carolina cherry would do so as well. So do we. If figs and the other shrubs named will live thus, the *cerasus* will. Botanists say of it, it grows "from South Carolina to Florida," but it grows in North Carolina as well, and very likely it would prove hardy at Pearson, Md., this place being close to the sea.

A short time ago a correspondent wrote us from Waterloo, Kan., that this cherry was quite hardy there, and, further, he spoke highly of its beauty as an evergreen and as a flowering shrub.

In the South it is often seen cultivated in gardens, and as it stands pruning well it fills many useful positions. It ought to supply the place of imported bay trees excepting that it is, perhaps, not as hardy; but just how much freezing it would endure has not been determined.

How to Prune Hollies.

The correspondent who inquires how to prune hollies will find that a thriving holly will need little or no pruning. It forms a bush or tree of beautiful shape without any pruning. All that may be required is to top a shoot here and there that may be getting too far out of the line of uniformity. On many estates trees of perfect outline may be seen and, apparently, a pruning knife has never touched them. The English hollies that come here at Christmas are pruned, but this is to make them of pyramidal shape, one preferred to its natural spreading shape.

But there is a time when hollies want pruning and a more severe one, too. This is when they are transplanted. There are no filers or next to none on a holly, and unless closely pruned success is doubtful. Prune very hard, and at the same time cut off every leaf. What is left after this is done will make a sorry looking object, but the correspondent would find the bush, or tree, would live, and in a few years his holly would give him great pleasure.

A Cinnamon Tree Growing at Los Angeles, Cal.

Cuttings of Shrubs.

The season for preparing cuttings of shrubs, trees and vines is waning. Often planting is commenced in March in the Middle States, before this in the more Southern ones. Besides that cutting making in Winter makes the rooting of the cuttings more assured than when made later it fills in time that it is not always easy to do in the freezing days of Winter. Winter-made cuttings, when stored away in damp sand, form a callus to some extent, and this aids in root forming, so that the cutting becomes a plant in quicker time than when not made until it is set out.

Besides the greater number of shrubs, trees and vines can be increased by cuttings. Catalpa, plane, poplars, willows and, in fact, all sorts can be tried. Of course, such kinds of trees as oaks, gums, ash and maple are not worth trying. Some would not root and the most of them are better raised in other ways.

Honeysuckles and many other vines, common and uncommon, can be raised from cuttings made now. The American and Japanese ampelopsis root readily from hard wood cuttings.

JOSEPH MEEHAN.

WESTERN NEW YORK HORTICULTURAL SOCIETY.—At its recent meeting, held in Rochester, N. Y., this organization elected William C. Barry, of Ellwanger & Barry, president for the nineteenth time, in spite of that gentleman's protest. Other officers elected were:

Vice-Presidents, S. D. Willard, Geneva; J. S. Woodward, Lockport; S. W. Waddams, Clarkson; Albert Wood, Charlton Station; secretary and treasurer, John Hall, Rochester.
Executive Committee, C. M. Hooker, Rochester; D. K. Bell, Brighton; DeWane Bogue, Medina; L. H. Dewey, Rochester; H. S. Wiley, Cayuga.
Botany and Plant Diseases, Professor F. C. Stewart, Geneva; Dr. L. H. Bailey, Ithaca; Professor S. Fraser, C. H. Stuart, Newark; Wilbur T. Mann, Barker.
Chemistry, Dr. L. L. Van Slyke, Geneva; Dr. S. A. Lattimore, Rochester; Professor L. P. Roberts, Ithaca.
Entomology, Professor B. J. Parrott, Geneva; Professor M. V. Slingerland, Ithaca; Professor E. P. Felt, Al-

In the course of his address to the society Mr. Barry recommended that greater consideration be given by nurserymen to the value of dwarf trees; and dwell on the necessity of advocating improved home surroundings. He said next year the society would meet in the new convention hall in Rochester, which had seating accommodation for 2,000 persons, which number he hoped would represent the total number of members at that time.

There was during last year no new and alarming outbreak of diseases dangerous to tree life, according to the report of Professor F. C. Stewart, of the experiment station at Geneva. He reviewed the work of his station and of the one at Cornell in fighting black rot with Bordeaux mixture, which has been quite successful.

B. J. Chase of Sodus was granted the first Ellwanger prize of \$40 for the best maintained private place with reference to the collection and placing of ornamental trees, shrubs and hardy flowers. Luther Collamer of Hilton won the second Ellwanger prize of \$20 awarded for the most interesting and best maintained collection of large and small fruits.

A notable feature of this always interesting gathering was the large number of young men present at the sessions.

The Cinnamon Tree in California.

I send you a picture (herewith reproduced) of a fine specimen of cinnamon tree, the only one that has come under my observation growing here in the open. The tree so nearly resembles the camphor that only an expert forester can tell the difference on sight. Not being so hardy, it will never be used as a street tree in this part of the country, as is the camphor.

Cal. P. D. B.

NEW (MY MARYLAND) ROSE

Best up-to-date commercial rose. Read what others have to say about it:

Among the many new roses of the year, there is none which has impressed us more as being worthy of a thorough trial. It has been exhibited only as No. 294, being a seedling raised by John Cook of Baltimore—a beautiful rose with an exquisite fragrance. In color it may be described as a soft salmon pink, which brightens up beautifully as the bud opens. We are intending to plant this rose in quantity.

A. N. PIERSON, Cromwell, Conn.

In reply to your inquiry, what we think of your new rose "My Maryland," we would say that after seeing others we still believe that you have the best new rose of modern times.

GUDE BROTHERS, Washington, D. C.

Price 2 and 2½ in. pots, \$25.00 per 100; \$200.00 per 1000; 3 in. pots, \$5.00 per dozen.

JOHN COOK, 318 N. Charles Street, BALTIMORE, MD.

Ottolander & Hooftman BOSKOOP, HOLLAND

Our Mr. HARRY VAN KOOLBERGEN has just arrived in New York with twenty cases of **ROSES** in the best varieties, and will dispose of them in case lots at the lowest possible price. Each case contains about one thousand roses in mixed sorts. Address

HARRY VAN KOOLBERGEN

c/o Maltus & Ware 14 Stone St., NEW YORK

We are also introducing several novelties in **ROSES** that will appeal to American growers:

- Otto Von Bismarck** Awarded 3000 Mark Prize
- Veilchenblau** (Violet Blue)—The Blue Hardy Climber
- Crown Princess Cecelia** Awarded Prize of Honor
- Friedrichsruh** Awarded Gold Medal & Prize of Honor

Our representative, Mr. HARRY VAN KOOLBERGEN, will call on the trade during **February, March** and **April**, showing colored plates of these novelties.

(32) **Moschosma riparium**.—This being a new plant introduced, would you please give me the best cultural directions for same. J. S. Conn.

—The moschosma is a very easy plant to handle, and now that the plant is through flowering it should be kept dry and reasonably warm at say 50 to 55 degrees nights. Cut back any straggling branches and loose growths. The young shoots will push out of the old wood and these may be taken off and rooted like any other cutting without any difficulty. After being potted the young plant can be grown along, and after being pinched once or twice to get it into shape it may be left to its own devices. It makes a better showing if grown on the style of a pyramid than in any other way. Do not syringe unless signs of red spider appear; and pot on as the plants require it to keep them moving along.

The moschosma, in common with many other African plants, does not like too much water; but aside from that is one of the most easily grown plants one could wish for, as neither insects nor mildew affect it.

Some criticism has been directed against this plant, and with reason, as it has been found to drop its flowers and will not stand the abuse of wholesale handling for the Christmas trade; but it has been very well received in many cities where the florist retails much of the stock he grows, and it has made a place for itself fully equal to what I expected of it. CHARLES H. TOTTY, Madison, N. J.

(33) **Botanical Name of Black Spot**.—Kindly give the botanical name of the black spot fungus on American Beauty roses. H. R. Illinois.

—Actinonema Rosae.

(34) **Woodlice in Mushroom Beds**.—Please give me a remedy to eradicate woodlice that destroy mushrooms? T. U. Nebraska.

—See answer, page 138, issue of February 1, 1908.

(35) **Coal Oil Stove in Greenhouse**.—Kindly permit a subscriber a question that, no doubt, will interest many small dealers in plants at this time of the year. Would not a coal oil stove do in a very small greenhouse, just to keep the frost out? We have often in the Spring short but very severe snaps of frost that do a great deal of harm, while, as a rule, heat is unnecessary. J. K. A.

—Heat of any kind is preferable to allowing the plants in a greenhouse to get frozen, and if no other plan can be devised, a kerosene oil stove will do; but why not install a regular heating apparatus? If a greenhouse is to be of any use at all, it certainly needs something more in the way of heating than just having the frost kept out of it.

THE WEEK'S WORK
Timme's Timely Teachings.

Cinerarias. The sight of an unrivaled collection of hybrid cinerarias in full bloom is a rare treat, more often to be enjoyed in a visit to park and private conservatories than in a stroll through miles of houses conducted by commercial florists.

Indispensable for unhampered culture and brightest results is a good strain of seeds to begin with. Good seeds in the first place means fresh seeds; and, secondly, those borne on the finest of plants selected for the purpose.

Cinerarias wintered in this manner will by this time have made considerable growth, will be strong, sturdy plants with hardly a trace about them to show that greedily so far has made their acquaintance.

Thousands of Orchids
In Sheath, Bud and Flower.

ORCHIDS
Largest Importers, Exporters, Growers and Hybridists in the world.
Sander, St. Albans, England
and
235 Broadway, Room 1, New York City.

ORCHIDS We shall receive this Spring large quantities of imported ORCHIDS, namely: Cattleyas, Dendrobiums, Oncidiums, Laelias, Vandas, etc.

roughly mixed, is now the kind of soil to use. If in point of drainage all works well, there will henceforth be no danger from overwatering—a thing ruinous to cinerarias, younger plants especially.

Chrysanthemums. It is time to prepare in good earnest for another season's success with chrysanthemums. Early propagation has a hand in bringing it, as the experience with a number of leading varieties in recent years, usually propagated too late, has shown.

Much, of course, depends on what varieties are to be grown and to what purpose, whether for exhibition, for home or wholesale trade, whether as specimen bush plants for show or potted stock for a general demand.

Good cuttings is the first consideration, indeed of foremost importance, not only in securing roots when put in the sand but to success with chrysanthemums throughout.

Violets. Conditions just right for the rooting of chrysanthemum cuttings are also favorable to the propagation of violets—a part of every grower's work never missing its turn at just about the time when to find proper space for everything

begins to be a trifle difficult. But the cuttings, and especially the rooted runners of violets, admit of being dibbled into trays or boxes, will there do as well and often much better than in the sand of a regular propagating bed, and in this manner a great amount of stock sufficient at least for the needs of the non-specialist—may be provided in this line for the next season.

Here again—and indeed here most emphatically—good cuttings have a lot to do with what signifies success with violets. In a violet house, where the stock up to date has caused no difficulty in its growing, proved satisfactory in all respects and is still far from being run to death, fine material for propagation is usually not hard to find in plenty at this time of the year. The old stocks, at any rate the most vigorous of the plants, send out at this season great numbers of sturdy runners. Of these the thickest are taken off for propagation. It pays to examine them somewhat closely so as not to let any slip in that show the least trace of mites, weakness or spot disease, if there is evidence or mere suspicion of these being now, or having been present at some time during the past season. Not to allow the cuttings after being collected to wilt at any time either before they are inserted or after they are placed in the sand is another point essential, in the case of violets in particular, because, if not observed at the start, the end in view may never be reached. Put into the sand in the coolest part of the propagating bench, or in well-drained boxes filled with sweet, sandy soil, kept moist and shaded, the cuttings with frequent sprinkling will soon supply themselves with ample energetic action for a transplanting into other boxes and much richer soil, now requiring to be spaced farther apart to permit free circulation of fresh air, the life element of violets, to reach every plant. And now, after the roots have taken to the soil and the plants become firmly established, shading will only be necessary on extremely bright and especially windy days in a house with every ventilator wide open. Air they must have, and even rushing currents through a well-ventilated house will bring no harm to the young stock, if the difference in temperature of the rushing drafts and that of the house is not too great. A stagnant, muggy atmosphere is what hurts violets, ruins them in the long run, and is the evil spirit that hovers over many a lot of slowly perishing plants, the grower never aware of his trouble's real cause. At first the boxes with the young violet stock will find a good place on a shelf in some very light, airy and cool greenhouse; later on an outdoor frame will be better for them.

The Lilies.

Easter is yet far away, but it is time to take another good look at the lilies to see how far our hopes of being well prepared for its coming are likely to be realized. The outlook is fair. Those growers who planted cold storage stock instead of newly imported bulbs are the wise ones; their outlook is the brightest. On a number of places Harrisii lilies have behaved poorly this season, the furtive fungus playing the very deuce everywhere. Longilorum, of either the giganteum, multiflorum of common stock, are by no means free of the disease, but the loss is not so great. The least affected, up to date, are lilies of the old candidum and new Azores grown types; but then they are not Harrisii lilies; and when one recalls the time when this most beautiful of all forcing lilies made its first appearance, and then looks at it now, success to what our Department of Agriculture has undertaken toward bettering affairs is most fervently wished.

If by this time lilies have so far advanced in their growth that all the flower buds in a clustering bunch are plainly seen amid the upper leaves—or more certain yet, if by the tenth of March the buds are well above the top foliage, there will then be no difficulty in having them in right time, if they are to be in bloom for this year's Easter. Lilies in that condition need no pushing; a night temperature of 55, with from five to ten degrees higher in daytime will be about right for them. Harder forcing will assist lilies not so forward in catching up, while those too far advanced will cause the greater trouble in holding back. If there are but a few of these no such attempt should be made; but if quite a block of lilies seems to be

CARNATIONS

Rooted Cuttings; Fine Healthy Stock
READY NOW:

Winsor	Per 100	Per 1000
White Enchantress	\$6.00	\$50.00

Strong rooted cuttings, red and yellow, 5 c. per 100, or \$4.00 per 1000. Brilliantissima 60c. per 100, or \$5.00 per 1000.

DAVIS BROS., Morrison, Ill.

coming too soon into bloom, the heat might be reduced five or even ten degrees, a little from day to day. This, of course, will check rapid growth to a considerable extent, but if the lowering is too excessive or too sudden, the effect produced is sure to prove disastrous to lilies having made rapid progress under actual forcing so far. A gradual cooling off after most of the buds show the white color and a bloom or two has opened is the safer course after first allowing the lilies to reach this stage without retarding their steady growth. They can then be held back and in good shape for weeks if finally placed in as low a temperature as 40 or 45 degrees, where they still will continue to open slowly their flowers. Holding back more than hard driving will this year be the lot of most growers of lilies and other kinds of Easter stock, especially if the weather from now until Easter should happen to be clear. Lilies now need the grower's full attention as regards ample quantities of water, regularly applied food in liquid form and means toward keeping away greenfly. FRED. W. TIMME.

60 CHOICE VARIETIES OF VERBENAS

PRECISELY HEALTHY—NO RUST. Rooted Cuttings, our selection 75c per 100, \$6.00 per 1000. Plants, our selection, 2 1/2 inch pots, \$2.00 per 100; \$20.00 per 1000.

third, \$5.

Samuel Murray, Kansas City, Mo.—Best six plants
Cibotium Schiedei, not over ten-inch pots, \$50.

John Young, New York.—Cash, \$50; premium not yet
specified.

W. N. Rudd, Chairman Premium Committee.

"THE ROSE JOURNAL OF THE AMERICAN ROSE SOCIETY."—Ever since the inception of the American Rose Society there has been a feeling among the more progressive members of the organization that the society should publish a periodical devoted to the rose and kindred subjects, which publication would also act as the organ of the association. The project was strongly urged at the Washington convention last year by Messrs. O'Mara, Elliott, Craig, Hill, Secretary Hammond and others. With a view to putting the proposition into actual practice, Mr. Hammond has issued an open letter to the members and those interested in which he outlines his ideas of such a publication, at the same time distributing a prospectus relative to the enterprise and facsimile pages of the proposed paper. The secretary suggests among other things that the circulation should not be restricted to members; that the subscription price shall be 35c., paid in advance, the paper to be issued quarterly; that to carry this project through we should have not less than \$500 assured income. Will fifty rose growers in America join hands? The intention is to issue and circulate not less than 1,000 copies each quarter; and the advertising price set on one inch is \$10 for the first year.

The proposition is deserving of the best consideration of all rosarians.

Thompson C. Maxwell.

Thompson C. Maxwell, aged 86 years, a member of the nursery firm of Maxwell Brothers, Geneva, N. Y., died Monday afternoon, February 3, 1908. Mr. Maxwell was identified with the banking interests of Geneva and had lived here for sixty years. He was born in Tully, Onondaga County. He leaves a widow and two daughters.

W. B. K. Johnson.

W. B. K. Johnson, one of the leading nurserymen of Pennsylvania, died at Allentown, Pa., Wednesday, January 22, 1908. He made his fortune in the early seventies, when he made trips to Cuba and South America, importing shiploads of parrots to the United States and selling them at great profit. He was an authority on fruit growing, and was long on the staff of both the Pennsylvania and National Agricultural Departments. In his large nurseries, near Allentown, he had more than a million trees, which were frequently referred to by State officials as models.

The Late J. B. Heiss

Samuel Slade.

Samuel Slade, an old-time gardener of Utica, N. Y., died at his home there on Thursday, January 30, 1908.

The deceased was born in Somersetshire, England, about 85 years ago and his early life was spent in the old country. He came to America 56 years ago and located in Utica. For the past 39 years he had been engaged in gardening in the vicinity of his home, and for a number of years was a familiar figure about the streets of East Utica, where he sold produce from his garden. He was always of a cheerful disposition, and had a very wide acquaintance in the section of the city where he lived. He leaves a widow, three daughters and three sons.

Numa R. Cook.

Numa R. Cook, for some time in the employ of the Green Floral & Nursery Company, Dallas, Tex., died at the home of his sister, Mrs. G. S. Boren, Pomona, N. C., on January 20, 1908.

Mr. Cook was born June 25, 1878, at Friendship, N. C. After attending the public schools he took a course at the A & M College, Raleigh, N. C., and then entered the employment of the J. Van Lindley Nursery Company, Pomona, N. C., where he had his first experience in the growing of cut flowers. He afterward held positions with florists in Pawtucket, R. I.; Norfolk, Va.; Chester, Pa.; Norwalk, Conn.; Lewiston, Me.; and Dallas, Tex., where he worked with Alexander Miller, who is manager of the Green Floral & Nursery Company. He was a young man of honor and ability and much loved by his people at home and his friends throughout the trade.

J. B. Heiss.

As briefly mentioned in last week's issue J. B. Heiss, the well-known florist of Dayton, O., died suddenly on Friday morning, January 31, 1908, while on a visit to his brother-in-law at Bethel, Clermont County. Ever since his return from Europe Mr. Heiss had been ailing and for some weeks was confined to his home by an attack of rheumatism. He was up and about again, however, and was taken suddenly ill on the train on which he was traveling with his wife and some friends.

Mr. Heiss was in his 54th year. He was born in Frankfort, Germany, and went to Dayton some twenty-five years ago. He was florist at the Dayton State hospital for a number of years, and some twenty years ago entered the florist business. From a small beginning he built up a large plant.

Eighteen years ago he married Miss Clara Ruchhaber of Dayton, who survives him.

The deceased was prominent in local fraternal circles and was a member of the Elks and the Masonic order. He was the first president of the Dayton Florists' Club, and was a member of the S. A. F. O. H. When the society met in Dayton, in 1906, Mr. Heiss took a most active part in connection with the preparatory work of the convention. He was prominent in the work of the East End Good Government Club and was active in all that was for the welfare of the city.

Mr. Heiss was a man of much ability and to know him best was to appreciate most his worth.

R. P. Speer.

Captain R. P. Speer, one of the best known horticulturalists in Iowa, died February 2, 1908, at his home in Waterloo township, aged thirty years. He was a member of the fifteenth general assembly, president for four years of the Iowa Horticultural Society, director for three years of the Iowa Agricultural Experiment Station, and trustee for a number of years of the Iowa Soldiers' Orphans' Home at Davenport. He served gallantly throughout the war, having been captain of Company B, Thirty-first Iowa volunteer infantry.

Captain Speer tested 250 varieties of Russian apples and 150 varieties of American apples, peaches, pears, plums and other fruit.

Felix Gillet.

Felix Gillet, a pioneer nurseryman of Nevada City, died on January 28, 1908. He was born in Rouchefford, France, March 25, 1835. In 1859 he went to Nevada City and followed his trade as a barber. He had purchased Barren Hill and devoted his spare time to clearing it and planting to trees, vines and shrubs. Later on he devoted all his attention to the business, becoming widely known as an authority on nuts and fruits. He leaves a widow and three sisters.

OUR READERS' VIEWS

Clematis Indivisa.

Editor Florists' Exchange:

I am afraid your esteemed Philadelphia correspondent is away off when he says in last week's issue that H. A. Dreer exhibited the new Clematis indivisa, "flowered for the first time." If he will look up the schedules of the Pennsylvania Horticultural Society for the years 1903 and 1904 he will find that in both those schedules H. A. Dreer offered a premium for the best spray of the above named clematis, and that on one occasion the prize was won by John H. Dodds, Narberth, Pa.

Furthermore, I might add that this plant was introduced into Europe in the year 1847. I well remember growing it in England 15 years ago. Our method of culture was as follows: It was planted out in a well drained border against the wall in a lean-to peach house and tied to wires about 10 inches from the wall. It was cut back annually and kept dry and cool till about the first of January of each year. When the peach house was started into growth, the clematis soon commenced growing and about the first of April it had made a growth of from 3 to 5 feet in length, covered with flowers. We used to find it useful for dinner table decoration, also for funeral work. I feel sure the plant can be grown to commercial advantage in this country if planted in a house where the sash could be removed during the Summer months, as it was always a lover of red spider. I believe if grown in a violet house it would give entire satisfaction.

Chester, W. Va.

JOHN THATCHER.

CLUB AND SOCIETY DOINGS

NEW YORK FLORISTS' CLUB. A well attended meeting of the club was held on Monday evening, February 10, President Weathered in the chair. Mr. O'Mara, for the committee on closer relations with the Horticultural Society of New York, made a final report, in which he stated that the associate membership proposition had been dropped and that the committee recommended that the members of the Florists' Club having in view the advancement of horticulture through public exhibitions in New York City, should seek full membership in the Horticultural Society, taking part in its proceedings and receiving due recognition on the executive body and council, such as is done in Boston, Chicago and Philadelphia. After some discussion, taken part in by Messrs. Manda, Jaenicke, Butterfield and others, the report was accepted and the committee continued. Mr. O'Mara stated also that the Horticultural Society was in negotiation with the authorities of the Museum of Natural History, looking to the securing of a hall in which to give an exhibition next Fall. It is more than likely that this privilege will be granted and a flower show held at that time, in which the Florists' Club will be asked to co-operate.

Resolutions on the death of Mrs. A. M. Henshaw and Victor Doryal were read and approved, and copies ordered sent to the families of the deceased.

Mr. Sheridan, for the dinner committee, reported that the St. Denis hotel had been selected for this pleasant annual event, the date being the last Saturday in February. There will be a very enjoyable entertainment consisting of music and story-telling, and the dinner itself will be up to the usual high standard of this hostelry. All that is needed to make the affair a grand success is a large attendance, and Mr. Sheridan asked that those intending to be present secure tickets at the earliest possible moment in order that proper provisions may be made by the hotel.

J. Canning, W. A. Sperling and P. T. Barnes were elected members. A committee on transportation to the S. A. F. convention at Niagara Falls will be appointed shortly by President Weathered in order to make arrangements for the conveyance of the members to this gathering.

The president appointed W. Wallace Burnham on the committee of awards in the place of Alfred Zeller, resigned.

W. A. Manda made a proposition that the club donate a certain number of medals for competition at the National Flower Show in Chicago. This matter was provocative of considerable discussion, resulting in the appointment of a committee, consisting of Messrs. Manda, Totty and O'Mara, to consider it. This committee later recommended that the New York Florists' Club offer a silver trophy valued at \$100 for three specimen palms, distinct species, not less than ten feet high. This announcement was telegraphed to Secretary Rudd in order that the premium might appear in the preliminary prize list of the National Flower Show.

J. T. Withers then delivered a most interesting lecture on the subject of "Tree Doctoring." Mr. Withers threw on the screen pictures of trees that had been treated by him very successfully, including the famous Liberty tree at Annapolis, Md. He also gave some interesting facts concerning the hardiness of trees, stating among other things that the ginkgo was perfectly hardy as far north as Montreal. It is one of the very best street trees and will stand a good deal of hard usage growing in poorer soil than many people imagine. He also spoke of the adaptability of the pin oak as a street tree. Referring to the transplanting of large trees, Mr. Withers said that very large specimens, while they might linger after being transplanted, would not give general satisfaction. He thought a tree of about 1 1/2 inches caliper could be safely transplanted and would grow successfully. In the filling of cavities in trees caused by decay, Mr. Withers uses reinforced concrete, so arranged that no air or moisture can reach the material, and permitting of the bark to gradually grow over the filled-in matter. As regards pruning, Mr. Withers stated that he preferred to prune all limbs requiring it flush with the tree, afterward painting the wounds over with Defoe's 523 paint. This material he considered preferable to coal tar, which was all right in the treatment of dry wood, but practically useless for live wood. He preferred not to prune trees, such as maples, while the sap was running in Spring, but to do that work sometime in the Summer.

The lecturer also threw on the screen various pictures showing the methods of tree protection as used in the cities of Paris, Berlin and others. His own prefer-

ence as a protector was wire netting, surrounding the tree to a considerable height, around the top of which was placed rubber hose so as to prevent slanking. Asked to name six of the best shade trees, he gave the following list offhand, stating that in order to answer the question fully, the nature and condition of the soil, the location and other points of that kind had to be considered. His list was: Oriental plane, oak, European linden, Norway maple, rock maple and American elm. The beech could be mentioned as a good street tree, or for private grounds and small parks. The horse chestnut is not a good tree for the street, because the conditions found there are too dry, but grown in deep, moist soil, one could not find a more beautiful shade tree than the horse chestnut. The speaker also showed several views of trees which were said to have been planted by George Washington on his estate at Mt. Vernon, among them a large *Buxus sempervirens*; and specimens of various fungi taken from trees in different parts of the world. A rising vote of thanks was extended to Mr. Withers for his most instructive lecture. The meeting then adjourned at a late hour.

On the exhibition table were some well-grown bunches of the violet Princess of Wales from F. G. Mense, Glen Cove, L. I. for which a cultural certificate was awarded. Wm. Sim, Cliftondale, Mass., sent several bunches of his new single violet, Boston, which were awarded a certificate of merit. H. A. Jahn, New Bedford, Mass., had on exhibition a bunch of his new white carnation, Lloyd, but they did not travel in the best shape and the judges asked to have the variety exhibited before them at some future time. The crimson carnation Wa-no-Ka from the Wa-no-Ka Greenhouses, Barneveld, N. Y., was exhibited and made a very good impression upon the members. The color, under artificial light, seems all that could be desired for a crimson, and the judges scored it 85 points. A light pink variety, shown by W. A. Manda, was very pleasing so far as the color and size of the flowers went, but the stems are inclined to be weak. This variety scored 73 1/2 points. A few blooms of a chrysanthemum somewhat after the type of Vivand-Morel were shown by W. E. Hamilton, Belfast, Me., through Charles H. Totty, for which the committee gave the thanks of the club.

The Connecticut Agricultural Experiment Station, New Haven, Conn., is distributing a calendar on which are given valuable formulae for insecticides and fungicides, etc.—a most serviceable publication.

A number of interesting articles are unavoidably crowded out of this issue; they will appear in future numbers of *The Florists' Exchange*.

Gladiolus Taconic.

The accompanying illustration represents a spike of a variety of gladiolus which we have named "Taconic," the stock of which has been grown and in-

Gladiolus Taconic. Author, Cowley. Courtesy Arthur George Bonar, N. Y. Berlin, N. Y.

creased in our fields during the past few years under field No. 605, and by this number only it is known to many florists, several seedsmen and many other visitors to Meadowvale Farm, who have particularly noticed and admired this variety. The description is as follows: "Bright lively pink, flecked and striped with shades of the same color, the petals lightening to the faintest blush in the throat. The markings on the lower petals are deep crimson, running into a thin strip of pale lemon yellow. Plant vigorous and flowers large, 10 to 12 being in bloom at the same time."

Under ordinary garden cultivation it attains a height of from 1 1/2 to 5 feet. It is one of the most beautiful and artistic varieties of the same color which it has been my pleasure to see.

The total value of plants, trees, shrubs and flowers imported into the United States during the year 1907, was \$2,011,710 as compared with \$1,750,160 in 1906.

Lily Cultivation in Japan.

The following interesting facts and figures concerning the cultivation of bulbs in Japan are taken from the newly issued catalogue of Ralph M. Ward & Company, New York, by whose permission the notes and accompanying illustrations are reproduced:

"Japan bulbs form a part of the importations of horticultural products to this country. The exports of auratum bulbs date back more than 30 years, when they were chiefly destined to England. At that time little or nothing was known about the method of preserving bulbs and as a consequence the bulbs, packed in large boxes, arrived mostly rotted at destination.

"The demand in Europe and America, however, was so strong that the business flourished year after year, until in 1906 the exports from Japan aggregated 12,062,194 bulbs, valued at 493,362 yen, as against 8,437,572, valued at 313,942 yen in 1905, and 9,291,321, valued at 335,390.56 yen in 1904.

"There are no accurate statistics available as regards the quantities and values of the several separate species, but the varieties of Easter lilies predominate, with auratum, rubrum, album and Melpomene following. It is estimated that about 7,500,000 Easter lilies are grown.

"In order to produce good Easter lily bulbs, the grower must first get a good quality of seeds (bulbules) and it requires fully three to four years to bring them up to exportable size, 6-8 and 7-9 inch bulbs. They require a peculiar soil, well fertilized. Moreover, they cannot be grown long in the same locality or they usually fail. These conditions prevent the average farmer from attempting to grow the article.

"LILIAM GIGANTEUM we consider, beyond a doubt, the best Easter lily for general purposes to-day. This bulb was introduced about 10 years ago by an English exporter and sent to London. Other species will follow soon, and longiflorum grown in the Hachijo and Bonin Islands may be introduced under separate names.

The giganteum are propagated from the bulbules produced around the underground stems. The larger the parent bulb, the more and larger will the bulbules be. Some 10-inch bulbs produce five to ten bulbules and sometimes one as large as 5 inches in circumference. The size 7 to 9-inch usually produces 2 to 4-inch circle. They are planted in November and December and are dug the next September, when they grow up to about 4 to 6 inches, which when planted will produce 6 to 8 and 7 to 9-inch bulbs the next August. If the size 6 to 8-inch are planted they generally reach 9 to 10-inch the next August. The most skillful and intelligent growers raise large sized bulbs and get large bulbules, which will produce larger bulbs in three years than four years' exertions with smaller sizes. Good bulbules always produce good bulbs.

"Our giganteum are produced from the very best selected healthy seed and receive careful attention all the year round. They are easily distinguished from the multiflorum and longiflorum by the shape of the bulbs. The average giganteum bulb appears as though it was grown with a string tied tightly around it, leaving the indentation on nearly all the scales of the bulb. The plant has larger and more narrow leaves, larger and thicker flowers, which last longer after being cut than those of the other varieties. They are less diseased than the other vari-

Lilium Wardarai as Compared with L. giganteum of the Same Size Bulb.

eties, owing mostly to the fact that a diseased giganteum bulb will produce no bulbules or seeds, whereas diseased other varieties will produce some bulbules, which if planted will produce diseased bulbs.

"Our control of the quality is maintained by buying up the very best seed bulbs produced. Large quantities are grown by our grower and his family, and the balance are let out under contract with reliable growers under the supervision of an experienced foreman for each district. The best fields are situated about 60 miles from Yokohama. Our bulbs are planted deep in the ground, which is necessary for the best quality. It therefore takes longer to grow them than if they were grown near the top soil, where they round out larger in size more quickly than when planted deep.

"LILIAM LONGIFLORUM MULTIFLORUM is perhaps the most popular Easter lily in America at the present time, owing largely to the fact that the average American florist is afraid to venture with the later arriving giganteum, and therefore favors this variety as an improvement over the common longiflorum. It has narrow leaves, lasts longer in the fields than the longiflorum and has less disease.

"This variety and also the longiflorum are grown within a short distance of Yokohama and surrounding cities. The two varieties are often grown in the same field together, in the lowlands, adjacent to the rice fields; consequently, they are dug earlier than those varieties grown in a colder climate and shipped abroad for early lilies.

"LILIAM LONGIFLORUM is the original Easter lily exported from Japan. It is still extensively forced in England, but in America the demand has fallen off to very small quantities in favor of the multiflorum variety. It is also grown in lowlands and is ready for export early. The longiflorum flowers in Japan earlier than the multiflorum, but it has more disease and dies earlier than the latter variety. Longiflorum flowers about the same as multiflorum and has wider and fewer leaves.

"LILIAM WARDARAI is a new variety of longiflorum, which we expect to import in quantities in a year or two. This year we will have but a limited number for sale. This lily is an improvement on the giganteum; it will force a taller plant and with more buds.

"LILIAM AURATUM in the early days grew wild in Japan and were handled by general exporters of Japanese produce, consisting entirely of foreign merchants. The business in this line developed to such an extent, however, that they found it required more special attention than these busy foreign merchants could devote to it, and all the difficult problems of handling this class of produce were entrusted to specialists who could devote their full energies to the troublesome business. This gave rise to the ultimate formation of the first nursery business in Japan, which is recently reported to have been sold out.

"Auratum lilies grow wild still in many localities in Japan, but these are very perishable and cannot be exported safely. They are gathered in mostly 6 to 8's and grown on for one or two years on the hillsides and cultivated, after which time they will stand the long voyage necessary.

"LILIAM SPECIOSUM RUBRUM are largely exported together with auratum and other speciosum lilies to England. American florists have not yet properly taken hold of these hardy lilies, but the imports are increasing gradually and the florists are finding them valuable. Rubrum may be held well in cold storage for a long time, and can be bloomed at almost any time desired. They make a good Christmas article if properly handled.

"Large quantities of these bulbs grew wild on an island near Nagasaki, Japan, and when the supply became scarce a few years ago, these were brought over to the bulb fields and grown on for the present crop.

"LILIAM SPECIOSUM ALBUM, being white, are always in large demand, especially in England. The crop has been short for several years and will not be plentiful for a few years yet. These bulbs cannot be found growing wild, so the grower must resort to bulbules, the same as in the case of Easter lily varieties.

"LILIAM SPECIOSUM MELPOMENE is a selection from the rubrum. The shape is irregular and the bulbs produce many crowns. The supply will diminish year after year.

"LILIAM SPECIOSUM MAGNIFICUM is also a selection from the rubrum type, but of a much superior quality. These bulbs were recently brought from an island near Nagasaki and are being grown on for a permanent crop. The plant stands erect and grows leaves in four directions and the flower is better than that of the old type. This variety is recommended very strongly for more extensive use. It keeps well in cold storage and can be flowered whenever wanted. It is earlier than Melpomene and grows taller."

Bride

Roses at Establishment of J. A. Budlong, Chicago.

Bridesmaid

AMONG THE GROWERS

J. A. Budlong, Chicago.

The profitable results which accrue from careful and vigilant culture are nowhere more apparent than at the establishment of J. A. Budlong at Bowmanville, Chicago. Every one of the thirty-three houses forming the plant reveals stock in the pink of condition. A range of nine houses each 27x200 feet, devoted to carnations exclusively, is just now a veritable picture. There may be seen a number of varieties, all in excellent crop, including Mrs. T. W. Lawson, Winsor, Aristocrat, Boston Market, Cardinal, Enchantress, White Perfection, and Victory. Cardinal, as a scarlet, is not liked here so well as Victory, proving very slow in starting, and not at all a vigorous grower; all the other varieties grown seem to get ahead of it. Victory starts quickly and seems to be more free in its blooming, reaching a good state of perfection in October. Enchantress is wonderfully well done, a house of it showing large, well-shaped flowers on stems fully 36 inches long, and a compact mass of bud and bloom. Aristocrat is something of a favorite, proving an excellent producer of fine flowers; it is very largely benched, filling a whole house. This is its first year here. The house was planted July 15, and cutting was commenced about October 1. Winsor looks very well, and is proving a good producer, although rather a slow grower. There is a house of Mrs. T. W. Lawson, but it is not quite up to the standard reached in previous seasons; while perhaps better here than seen in many establishments this year, the decline in the commercial value of this variety is quite noticeable, and in keeping with the experience of other growers in different parts of the

country. Among the whites are to be noticed Boston Market, White Perfection and White Enchantress. Boston Market looks quite outclassed by the other varieties mentioned, and is to be thrown out after the present season, in favor of White Enchantress, which is being grown principally for stock. White Perfection is in capital shape, and is producing heavily.

All carnation stock at this establishment is field-grown from 3½ inch pots. The rooted cuttings are planted in 2 inch pots, and subsequently in 3½ inch pots, from which they go to the field. This procedure is necessary on account of the sandy soil of the field, which is too light to ball on the roots at transplanting time. The ball of earth leaving the pots with the plants is retained and furnishes support from the field to the bench.

A large house is just now set apart for chrysanthemum stock, and contains 15,000 plants, covering the varieties Monrovia, October Frost, Alice Byron, White and Yellow Chadwick, White and Yellow Bonaffon, and a few Dr. Enguhard.

There are six houses of American Beauty roses, four of them 400 feet long, but this section at the present time is somewhat off crop. It promises well, however, for a bountiful crop at Easter, in addition to filling requirements prior to that holiday. There are nine 300-foot houses of Bridesmaid roses, most of which are stocked with two-year-old-grafted stock. These houses are just coming into crop, and the stock is in splendid condition, the plants throwing up numbers of long flowering stems. Six 300-foot houses are devoted to Bride roses, which are seen in identical shape with the Bridesmaid. All the roses in the establishment are grafted stock. The grafting for this season's new stock has just been completed. The manetti used this year arrived in especially fine condition.

Hardiness of Gladiolus Præcox.

The perfect hardiness of *Gladiolus Præcox* with most cultivators a matter of great doubtfulness. According to a letter of the introducers, the firm of F. Roemer, at Quedlinburg, appearing at p. 173, in the issue of *Die Gartenwelt* for January 11, 1908, the plant in color and markings or size is not inferior to any other race of gladiolus, and it has the great advantage over those of being easily increased by seed; the seedlings also flowering the first year. That the corns are hardy was well established in F. Roemer's garden last winter, a severe one in Germany. Young brood and corns were inadvertently left in the soil in which the seedlings had been grown, which was thrown into a heap and exposed to the severe frosts that occurred, without protection from snow or anything else; and the frost had penetrated the soil to the depth of one foot. Toward the middle of May F. Roemer was astonished to observe the heap to be covered with gladioli arising from the brood corns, many of them only 5 cm. deep in the soil. The corns were left undisturbed in the heap where they flowered beautifully. The matter to be certain about is, if only the brood is hardy, and the full grown corns not hardy. So far no species or race of gladiolus have proved perfectly hardy. Further trials seem desirable with *G. Præcox*. —Horticultural Trade Journal, England.

INTERNATIONAL EXPOSITION OF FLOWERS AT GHEENT.

Consul W. P. Atwell advises that the centennial exposition of the "Societe Royale d'Agriculture et de Botanique" of Ghent, Belgium, will be held in the gardens of the Casino from April 23 to May 3, 1908. This exposition is international and devoted exclusively to plants, flowers, seeds, and in general to everything pertaining to the horticultural trade. This exposition is held regularly every four years, and the coming one being the centennial, the display promises to be very interesting.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Chicago, Ill.

HAUSWIETHE, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

An "Out-of-the-Rut" Retail Florist.

Novelty in the methods of conducting a florist's business is an unlooked for quality nowadays, when it is generally supposed that the flow of ideas generated with the business has ceased, and a show window well stocked with plants and flowers is universally accepted as the one thing needful to attract the passing crowd. H. R. Hughes, a retail florist of Chicago, is running a long way in advance of his brother florists, in that he has broken the fetters of conventionalisms and has formulated ideas of his own and put them into practice with the result that he has worked up a very profitable business.

A Corner in Store of H. R. Hughes, Chicago. Cork Bark Arrangement.

Located at the corner of Lincoln and Van Buren streets, in the "hospital district," he realized that he would have to build up his business from a demand created in territory which could hardly be extended beyond a radius of half a mile or so from his store. How to make his store known to everybody in that section was the problem, and he concluded that the best plan was to so arrange and decorate his store that once seen it would be talked about and remembered, and people would afterward go out of their way to pass it. Then he reasoned that when these people wanted flowers the name and store of "Hughes" would be paramount in their minds.

Originally a greenhouse, the greenhouse style of store is continued although the building has been remodeled into a handsome and substantial structure. It has four immense plate glass windows running without intervals along the Van Buren street side of the structure. Two of these are used solely for exhibition purposes and the displays given in them have been, and are, the talk of the town. The windows light a portion of the store separated from the rest by a partition, but open near the window frame. This apartment is the exact width of two windows and carries a stage setting, with the appurtenances of a theater stage, at all seasons of the year, and typical of all the important feasts, anniversaries and seasons.

At the present time St. Valentine's Day is being featured, and we are enabled to present a picture of this setting. A handsome girl, in wax, is seen driving a chariot of gold and crimson over a sea of clouds, the motive power furnished by a flock of doves. This represents the valentine of commerce, the paper filled and daintily perfumed variety for decades dear to the youthful heart. In the foreground is the valentine sentiment as preached by Hughes—the substitution of a nice box of flowers for the factory made article. A facsimile of an old colonial porch entrance to a mansion is seen, with the figure of a boy in the Hughes livery carrying a valentine box of flowers, the Hughes imprint on the box bearing the additional device of a pierced heart, the emblem of the day. The whole setting is artistically lighted electrically, colored lights in the sky scene and around the chariot, and with stage lights above and below. The imprint on the box of flowers is also illuminated. A foot sign in one of the windows bears the legend "Let me send your Valentine for You."

This setting will be followed by others for Washington's Birthday, St. Patrick's Day, Easter, Decoration Day, July 4, and so on. The different settings on the average necessitate an expenditure of from \$150 to \$200, but occasionally, in whole or part, the scenery may again be used for purposes of decoration in the general run of Mr. Hughes's business. Rather expensive, nevertheless, one might think, for local store advertising, yet Mr. Hughes has found it very profitable. It, however, is only one branch of Mr. Hughes's general advertising plan. As an auxiliary he publishes at each season, or with prominent window settings, small four-page illustrated folders, covering a suitable story for each occasion.

In the store proper some little reminder of St. Valentine's Day also appeared during the season. A lot of Christmas roping was arranged in lattice form upon the partition separating the store from the scenic apartment. Within each opening was suspended a small heart, cut from crimson cardboard. Large hearts of the same material were also hung in prominent places, and painted Cupids were seen everywhere.

As an additional attraction, and one which is another drawing feature in the advertising program, is a smaller deer park at the rear of the store, with a frontage of about 75 feet on Lincoln street. This park is fenced with wire and presents an uninterrupted view of the park residents which comprise, Billy, Fauna, Jasmine and Dearie, a quartette of domesticated deer, the delight of the children of the store's business radius, as well as of grown ups—Mr. Hughes accentuates his deer park exhibition by a folder which he distributes, entitled "Another Bear in Town." J. H. P.

The Bud-Rot of Carnations.

BY E. D. HEALD, Agricultural Experiment Station of Nebraska.

Other Diseases.

4. **THE FAIRY RING.**—This disease of carnations has been reported by various writers (Berkeley, Smith, Atkinson), and its common name has been derived from the fact that the fungus produces its fruiting hyphae in concentric zones around the center of infection. While the disease attacks mainly the foliage and stems it has been reported as affecting flowers and buds. Selby mentions the same fungus (*Heterosporium ochinulatum* (Berk., Cooke) as the cause of "leaf and calyx mold" of carnations, which produces unsightly discolorations on calyxes and pedicels as well as upon leaves. Sorauer has recorded a case in which the disease seriously affected the flowers. Many buds did not open at all or only slightly, and flowers that did open showed brown dry spots upon the petals due to the growth of the fungus and the accumulation of the spores.

5. **SPOT OF CARNATIONS.**—This disease which is due to *Septoria dianthi* Desm. is known to occur in both this country and Europe. The spots are circular or oblong with a dirty white or brown center, bordered by a dark purple band. The central area shows black specks or pyrenidia filled with spores. No mention is made by any writers who have studied this fungus of its occurrence on parts other than leaves and stems, although it is probable that it may be found on flower parts, at least the calyx.

6. **CARNATION LEAF MOLD.**—This carnation trouble has been described by Halsted and attributed to a species of *Cladosporium*. No specific name was assigned to the fungus. The fungus caused a spotting of the foliage and in severe cases the entire leaves or entire top of the plant were affected.

7. **ALTERNARIA DISEASE.**—This disease is known

St. Valentine's Day Window.

St. Valentine's Day Arrangement.

At Store of H. R. Hughes, Chicago.

to occur both in Europe and in this country. According to Sorauer the trouble first shows as yellow, slightly swollen spots on leaves, stem and calyx. Later the leaf turns brown and is completely killed, while the affected spots show a blackish powder due to the accumulation of *Uromyces* spores.

8. RUST.—This disease (*Uromyces carnophyllum* (Schr.) Schroet.) attacks carnations at all stages and affects any of the green parts producing the characteristic rust sori. Although this disease did not appear in the United States until 1891, it is now very generally distributed. It is present to a greater or less extent in nearly all greenhouses.

9. SMUT. Carnation smut (*Ustilago violacea* (Pers.) Fekl.) is not known to occur in the United States except on other hosts.

10. BOTRYTIS DISEASE.—According to Atkinson, carnation flowers and buds may suffer from the attacks of a *Botrytis*. This trouble is prevalent, especially when the soil and air of the greenhouse are kept too damp. Selby has briefly described the same trouble, but neither writer refers the fungus to a definite species of *Botrytis*.

In the foregoing list it may be noted that the only serious fungus diseases affecting the flowers are due to the fairy ring fungus and the unnamed species of *Botrytis*, which is probably *Botrytis vulgaris*. In addition to these the trouble known as "petrified buds," which is apparently a physiological trouble, was reported by Kennedy. Arthur has reported an abnormal condition of carnation flowers in which the petals become adherent. No animal or fungus parasites were found to be associated with this trouble.

Predisposing Causes.

The bud-rot of carnations is a disease that is not likely to prove troublesome in greenhouses that are kept in prime condition for plant growth. It is rather a disease of neglected houses, and just as certain human diseases are frequent in unhygienic surroundings, so the bud-rot is a disease that attacks carnations and becomes troublesome when the plants are subjected to unfavorable conditions. Only sporadic cases of bud-rot have ever been observed in the best houses, where proper cultural methods and greenhouse hygiene were practiced.

The first and perhaps the most important factor influencing the development and spread of the disease is the water relation. In all of the houses where the bud-rot has been prevalent the air and soil have been kept too damp. Over-watering, which keeps the soil saturated with water and supplies abundant moisture by evaporation, affords favorable conditions for the development and spread of the disease. This fact has been demonstrated by culture experiments in the greenhouse and is completely corroborated by the examination of conditions in houses where bud-rot has been prevalent.

In addition to the water factor, mention should be made of the unhygienic practices that often prevail in poorly cared-for houses. The accumulation of debris in the form of leaves, trimmings and other plant remains, rotting benches, and decaying organic remains in general, afford favorable conditions for molds of various kinds, and this is especially true for the *Sporotrichum*, which is only a facultative parasite.

No varieties of carnations appear to be entirely ex-

empt from the bud-rot. Sporadic cases have been observed on all varieties grown in the houses where the trouble was prevalent. The Lawson has suffered more than any other variety and must be considered especially susceptible. The only other variety which has been at all seriously affected is the Queen Louise. Benches of these two varieties growing side by side often have double the number of Lawsons affected.

Prognosis.

The bud-rot does not seriously affect the plant, as the fungus is confined entirely to the buds. It has never been found growing on other parts. The injury is due, then, solely to the fact that affected buds produce deformed flowers or entirely fail to develop. Flowers which upon superficial examination appear only slightly malformed are badly rotted within the calyx and soon wither and die. This fact has been especially noted in the discussion of the symptoms. If the buds have remained without infection until the calyx has opened sufficiently to expose the tips of the petals, subsequent infection will cause but slight injury, as the fungus does not have time to develop before the flower has expanded. In houses where the trouble is severe the buds become infected when quite young, probably when not more than one-half inch long. When infection took place at this early stage, many of the buds rotted before they had time to open, or if they did open at all produced very imperfect and worthless flowers. The actual loss from the disease may vary from a fraction of one per cent. to twenty-five or more per cent. in badly affected plants. In one small house the grower reported a loss of \$1.50 to \$2 per day from the bud-rot of the Lawson variety.

PLANT CULTURE Price \$1.00

The best book for the Plant Grower.
A. T. DE LA MARE PTG. & PUB. CO. LTD. 2 to 8 Duane St., NEW YORK

California Plant Notes.

One of the pretty ornamental grasses found on a few private places about here is Chloris elegans. The foliage is a half inch broad, stubby, pointed, light green in color. The spikes are silky with two rows of bloom of a light yellow color, quite distinct, which gives the plant a pleasing appearance when in flower. It is a perennial, and under good cultivation grows three feet high.

Recently on one of my excursions to learn of plant life as it grows here, I found a fine specimen of Nephelium longanum, well set with fruit, which was one-half inch in diameter, the cover being rough and leathery, which separated readily from the pulp, which was about the color of gelatine, with a delicious flavor. It is the fruit of Nephelium Litchi, in its dried form, that Chinese vegetable peddlers on this coast distribute freely among their patrons during their New Year celebration, which occurs sometime during the month of February. It is an evergreen shrub, with lance-shaped compound foliage, the leaves not quite opposite. The variety in question bears the smallest fruit of the three in cultivation, and it would be worth while to test them for commercial fruits in Southern California. The quality of the fruit is very fine.

Since Christmas two fine specimens of Magnolia Soulangiana have been in bloom on a private place at South Figueroa street. This beautiful subject is discriminated against because of its deciduous habit. It is marvelous how this idea prevails on this coast, that no tree or shrub should be grown that is of a deciduous character. P. D. B.

St. Louis.

News Notes.

We had with us the past week J. J. Karins, traveler for Henry A. Droer, Philadelphia. B. Hibbert, president of the Hibbert Floral Company, De Soto, Mo., called on Saturday.

Arnold Ringier and his traveling mate, C. Lempe, who represent W. W. Barnard Company, Chicago, are in the city this week cutting on seedsmen, florists and nurserymen. They report large advance orders so far this year.

J. P. Metzler, late of Denver, Colo., has been employed by Fred. Foster until this week. Mr. Metzler is a first-class workman, having been formerly employed by Warendorf, New York, and others.

The Tinsley Seed Company of 912 North Broadway has issued a florists' price list of bulbs and seeds. The company has been very busy of late.

George Hecht reports that he will build two new houses this Summer on his Chayton (Mo.) place.

Emil Schray received the congratulations of his friends last week; Emil says it's a girl and that both mother and child are doing well. The new arrival came on Friday, February 7.

The executive committee of the St. Louis Horticultural Society has arranged to hold a Spring flower show next month, to which an admission fee of 25c. will be charged. Last Spring the same society gave a free show with great success. The hall in which the exhibition is to be given has not yet been made public.

Fred. Ammann, Edwardsville, was over the past week and says he expects quite a delegation of our local florists to attend the third annual convention of the Illinois State Florists' Association at Springfield, Ill., February 18 and 19. He also expects a large delegation from the Chicago Florists' Club. Ex-President Irish of the local Florists' Club will read a paper at this meeting. ST. PATRICK.

Cleveland.

News Notes.

F. R. Williams, manager of the Cleveland Cut Flower Company has been confined to the house with the grip for two weeks.

The Cleveland Florists' Club gave its annual carnation exhibition Monday evening, February 10, which was a pronounced success. George Bate was appointed chairman of the judges' committee, acting with John Kelly and Will Stode. The Lamborn Floral Company, Alliance and Canton, O., received certificate of merit for fine vase of White Perfection.

Merkle & Son, Mentor, O., also received certificate of merit for vase of Beacon.

Isaac Kennedy's vase of a sport of Bride rose likewise received certificate of merit.

F. R. Williams Company displayed a fine new carnation, sport of Enchantress, a decided improvement on that variety and a trifle darker, for which they received certificate of merit.

Richard Witterstaetter received certificate of merit for vase of new carnation Afterglow—the finest flowers in the hall. Carl Hagenberger, Mentor, O., had a fine display of lilacs, and received certificate of merit for 100 Princess of Wales violet.

Heepe's of Akron, O., showed a table of fine mixed carnations and received special mention.

Charles Bartelle, West Park, O., received special mention for carnations and certificate of merit for vase of Enchantress. O. G.

WEST END, N. J.—W. G. Eisele is introducing this season two new cannas, one named Long Branch, a cross between Queen Charlotte and Italia; an orchid-flowering sort with bright crimson flowers, having an irregular border of yellow. This was exhibited at the Jamestown Exposition and received a diploma and gold medal. The other, sent out under the name of Neil Campbell, is a deep orange yellow variety, a very free grower, and one that comes into flower early; the foliage is dark purple.

Mr. Eisele's well-known work among cannas would seem to insure that these two varieties will prove very satisfactory sorts.

SOMERVILLE, MASS.—M. J. Conroy, for many years a prominent florist here, died of heart failure on Saturday, February 8, 1908, aged 70 years. He leaves two sons and one daughter.

These cuttings were all selected for my own use but have decided to put in roses, and so offer the lot or any part at \$20 per 1000, all guaranteed as represented.

A. L. THORNE, FLUSHING, L. I.

Buffalo, N. Y. News Notes.

Friday evening, February 7, a meeting was held to endeavor to awaken the present florists' club out of its coma. The attendance was surprisingly large. A nice supper was served, after which Mr. Sangster, Mr. Adams, Mr. Slattery and Mr. Brucker each made earnest appeals for more brotherly love and a better feeling. Their speeches were well received. Mr. Brucker had application blanks ready, and thereby got the signatures of all present. After the meeting all indulged in several games of bowling.

Miss Gertrude Sauer of Anderson's has the heartfelt sympathy of her many friends in the loss of her brother by death.

Daniel E. Long has a fine line of Easter novelties in tags, circulars and suggestions for the retail florists.

W. H. GREVER.

NEW ROSE

MRS. JARDINE

The following testimonials are from some of the most critical men in the trade in New York:

New York, Jan. 7, 1908.
 Mr. W. P. Craig, Forty-ninth and Market streets, Philadelphia, Pa.
 I have deferred writing to you regarding the pink rose Mrs. Jardine in order to give it a thorough trial. I have this to say about it: I find it an excellent keeper that its color remains true, and without a particle of doubt it will fill a long-felt want. It is in itself a dignified rose; its color is of the most refined pink, it seems to improve in use, its odor is sweet and refreshing and my only regret is that it is not in the market at the present time.
 Yours sincerely,
 CHARLES THORLEY.

New York, Jan. 17, 1908.
 Mr. W. P. Craig, Philadelphia, Pa.
 Dear Sir: We wish to thank you very much for the samples of rose, Mrs. Jardine, sent to us. We certainly think it is a fine addition to the rose family, and in point of fragrance is queen of them all. We find after keeping these roses two or three days they are really in better shape than the time we received them, and think it should certainly become very popular. With kind regards, we remain,
 Yours truly,
 TRENDLY & SCHENCK.

Washington, D. C., Jan. 18, 1908.
 Mr. William P. Craig, Philadelphia, Pa.
 Dear Sir: We cannot too highly commend your new rose, Mrs. Jardine. The sample cluster which we had in our window two days, then shipped to Washington, is still in perfect condition, and the color is as clear and true pink as when first received. In color, foliage, length of stem, fragrance and durability Mrs. Jardine leaves nothing to be desired. Very truly yours,
 J. H. SMALL & SONS.

Washington, D. C., Jan. 18, 1908.
 The Mrs. Jardine roses specified above are still in excellent condition; their quality and durability are without precedent.
 J. H. SMALL & SONS.

New York, Jan. 15, 1908.
 Mr. William P. Craig, 1305 Filbert street, Philadelphia, Pa.
 Dear Sir: Pardon delay in replying to yours. Regarding the new rose, Mrs. Jardine, I have been desirous of thoroughly testing this new introduction to the rose family and to be better able to criticize its characteristics. I regard Mrs. Jardine as possessing most excellent qualities. The rich pink shade in the bud, becoming a lighter color as the rose develops, together with its delightful fragrance, gives it very pleasing attributes and consequently it is a most desirable acquisition. The strong wood, which is nearly thornless, together with the bright, vigorous foliage, is invaluable and commendable to the retail florist. Its durability and lasting qualities when cut (very necessary characteristics for success) are almost unrivaled.
 Respectfully,
 ALEXANDER McCONNELL.

New York, Jan. 9, 1908.
 Mr. W. P. Craig, 1305 Filbert street, Philadelphia, Pa.
 Dear Sir: We find the Madame Jardine rose excellent in every way, opening very double and holding its color exceedingly well. It has a color which is a very true pink and a most popular shade. Its stem shows very good strength until the last, and the size and color of the foliage are very good. Thanking you again for the samples of this splendid rose, we remain
 Very truly yours,
 GEORGE M. STUMPP.

New York, Oct. 16, 1907.
 Messrs. Robert Scott & Son, Sharon Hill, Delaware County, Pa.
 Gentlemen: At the meeting held Monday evening, Oct. 14, the vase Mrs. Jardine exhibited was greatly admired and was awarded a preliminary certificate by our committee on awards. I wish to add that I placed some of these blooms in my window Tuesday morning, and they were indeed a great attraction. It is one of the most pleasing roses I have seen in years, and I prophesy a great future for it.
 Yours very truly,
 JOHN YOUNG, Secretary.

Every Florist who Plants a Rose for Winter Forcing wants at least Six Qualities:

- A free, strong growth, with good foliage.
- A variety that can be easily grown.
- Large flowers on long stems.
- Delicious fragrance.
- Distinct, pleasing color that will sell at sight.
- A rose that will hold its color in the dull days of December and January.

MRS. JARDINE has all these characteristics, and, in addition, is of so perfect a form that it can be used either in the bud or half expanded flower. The color is a bright rosy pink, shading in the outer petals to salmon pink, and, even in January when Bridesmaids and Killarney lose their color, Mrs. Jardine is as bright as in October or March. MRS. JARDINE is not a chance seedling, but was raised by Messrs. Alexander Dickson & Sons, Newtownards, Ireland. This firm has not only given us Liberty and Killarney, but has sent out more new roses of merit than any other Rosarians in the world. Over two years ago we spent three weeks in their trial grounds, and from three thousand seedlings we selected thirty-five varieties that we thought would be successful in this country for winter forcing. After testing these for two years we have selected one—MRS. JARDINE—which has with us, and which we think will with all good rose growers, fulfill all the qualities as stated above.

We extend a cordial invitation to everyone interested in this new Rose to visit our Nurseries and see it growing. We have it both own roots and grafted plants, and in all stages of growth. As the demand for this superb novelty will be very large, kindly place your orders early, as we fill in rotation in March, 1908.

MRS. JARDINE has been awarded two silver medals, numerous certificates and successfully stood the best test which any novelty can possibly have in passing unanimously, in December, the award committee of the *New York Florists' Club* after an exhaustive examination of the growing plants, with a score of 92 POINTS.

May We Send You Some Special Printed Matter About Mrs. Jardine?
 Strong plants on own roots from 2 1/2-in. pots, \$6.00 per dozen; \$30.00 per 100; \$70.00 per 250; \$250.00 per 1000; 5000 for \$1,125.00; 10,000 for \$2,125.00

Grafted on Dickson's Manetti Stocks, \$5.00 per 100 additional.

NEW CRIMSON CARNATION **HARVARD**

The color of this novelty is a very rich crimson. The blooms are of the finest as to size and quality and the habit is free and continuous, every shoot producing a flower with a calyx which we guarantee as non-bursting. Blooms borne on long, wiry stems from 24 to 30 inches and over. Price \$12.00 per 100, \$100.00 per 1000. Usual discount on large quantities.

New Carnation FAUST (BRILLIANT SCARLET) This novelty very fine for commercial use, owing to its extreme productiveness; a fine one for Christmas trade. Color, form, stems, habit and productiveness all that can be desired. Price \$6.00 per 100, \$50.00 per 1000. Usual discount on large orders.

Mr. J. D. COCKCROFT, Northport, N. Y. NEW YORK, January 16/08.
Dear Sir—We desire to congratulate you on the two varieties of Carnations, GEORGIA and HARVARD, which you have been sending us. Georgia we consider to be the best white carnation that comes to New York, and can easily sell from 50% to 100% more than regular white. Harvard we think to be the best dark red coming here, easier to sell at double the price of any other dark red. With kindest regards, we remain,
Yours truly,
IRAENDLY & SCHENCK, Wholesale Florists.

Plant Notes.

GLOXINIAS IN FRAMES.—Many florists grow gloxinias for the flowers exclusively and those who do so will find less trouble in growing these plants for that purpose in frames than in pots continuously in greenhouses. When frame culture is decided upon for a certain number it will be well to select the required number of bulbs, picking out the largest and oldest from the stock, and keeping them back until it is absolutely necessary to start them. When that is the case proceed in the same way as if the plants were intended for pot culture finally. The plants may be placed in the soil prepared for them in the frames when the temperature outdoors can be relied upon to be warm enough to suit their requirements. Careful watering is fully as necessary for the successful cultivation of gloxinias in frames as it is in the case of pot culture indoors. The glass should be provided with moveable shade for the protection of the plants from the direct sunlight during part of the day.

DRAECAENA INDIVISA.—One of the most useful plants for retail florists is Dracaena indivisa, there being almost endless purposes to which this graceful and accommodating plant can be successfully used. For filling tubs, vases, window boxes and other like outdoor embellishments in Summer it is almost indispensable; and again when something other than a fern, aspidistra, or palm is desired for indoors a well-grown Dracaena indivisa will give about as much satisfaction as any other subject. It takes two years to make good specimen plants of Dracaena indivisa. Seed should be sown early in the Spring and the plants subsequently potted up as their growth requires it until the Summer following, when they should be planted outdoors in the open ground and left there until it becomes necessary to remove them for safety.

HERBACEOUS CALCEOLARIAS are now making growth rapidly and any check or hindrance will affect them greatly. It has been many times said of these plants that if kept cool and given plenty of room and enough to eat and drink they will get along all right; so they will, but if any one of these necessary conditions is absent the plants are quick to show resentment. In shifting calceolarias for the last time or into their flowering pots a compost of two-thirds good turfy loam and one-third of equal parts well rotted cow manure and leaf mold, with the addition of a sprinkling of sand, should be used. Like all quick rooting and growing plants of this nature, it is not to their advantage to pot very hard, nor so loosely as to allow the water to run through too quickly. The plants should have plenty of light and a position as near the glass as circumstances permit. After the roots are well through the soil in the flowering pots liquid manure ought to be applied at regular and quite frequent intervals; there need be no fear of injuring them by overfeeding after the plants attain that stage of growth.

JERUSALEM CHERRIES.—Results out of proportion to the trouble involved will repay careful attention to the growing of a large lot of Jerusalem cherries. From seeds sown from now until a little later fully developed plants will be available for next Christmas. The seed should be sown in shallow pans two-thirds filled with loam and leaf mold, first providing good drainage. The pans should be placed in a gentle heat where the seedlings will soon make their appearance. When sufficiently large to handle prick off the seedlings in flats,

DEFIANCE

JENSEN & DEKEMA,

674 W. Foster Ave.,

CHICAGO.

The only scarlet to grow for quality and quantity. Let us have your order at once so as to secure early delivery.

\$12.00 per 100. \$100.00 per 1000.

W. N. RUDD,

MORGAN PARK, ILLS.

and, later, when they have grown and got well established in the flats, they should be potted singly into small pots and if need be repot them later; but plant them out in the field during the Summer. When the plants are growing vigorously, in their early stage of growth they should be frequently pinched in order that they will become stocky and bushy in habit. Jerusalem cherries are easily grown in standard form by simply tying the single stem plants to stakes and allowing them to grow until they have attained the desired height when they should be pinched to induce them to make heads. When planted out in rich soil Jerusalem cherries make rapid growth, but the plants will grow well in any fairly good garden soil.

PETUNIAS are not only gaining rapidly in favor again for bedding outdoors, but they are also beginning to be made use of extensively for cutting from during the Summer. For the latter purpose the plants set outdoors are available, but more satisfactory results follow when they are grown in good soil in frames. Seed of the best strains should now be sown, and when the seedlings are large enough they should be transplanted into flats and later into small pots, finally planting them in the frames. When once in possession of good double petunias it will be worth while to keep propagating by means of cuttings, whereby they are quite easily multiplied.

ADIANTUM FARLEYENSE.—Good specimen plants of Adiantum Farleyense are well worth striving for, and the frequency with which such plants are seen nowadays indicates that after all a great deal of strife is not necessary in the work of producing such, rather that their simple requirements are more commonly understood, and once understood rigidly attended to. One of the very best growers of this beautiful fern adds not a particle of sand or leaf mold to the soil used in potting after the first shift, using instead nothing but the best fibrous loam, adding just a dash of lime. Drainage is of the utmost importance in the growing of A. Farleyense, and the best method of supplying drainage is that of placing a small pot inverted over the hole in the bottom of the larger one into which the plant is to be put, then placing several pieces of broken pots around and over the one inverted, and over all a little dry sphagnum moss.

ALPINIA SANDERAE makes a handsome specimen plant for use in conjunction with more sober and dull looking subjects, but otherwise it is not of itself a plant worthy of very much consideration. It is true that so long as it can be kept dwarf enough it can be used to advantage in filling baskets and in other kinds of made-up work by florists, but it has such a tendency, with me at any rate, to elongate that usually it is unsuitable for that kind of work. It is easily propagated from division of the rhizomes at this time of the year, or a little later. All that is required is to separate them and place those thus severed in heat, potting them subsequently either singly or placing a number in pots or pans.

D. M.
